U.S. Nuclear Regulatory Commission ATTN: Document Control Desk Washington, D.C. 20555

Gentlemen:

In the Matter of Tennessee Valley Authority

,

Docket Nos. 50-327 50-328

SEQUOYAH NUCLEAR PLANT (SQN) - REVISION TO THE TECHNICAL SPECIFICATION (TS) BASES (REVISIONS BR-6, UNIT 1 AND BR-7 and BR-8, UNIT 2)

The purpose of this letter is to inform NRC of changes that TVA has incorporated into the Bases section of the Units 1 and 2 TSs. Specifically, TVA has revised Bases Section 3/4.7.8 for both units to clarify the intent of the vacuum relief flow during TS required testing of the auxiliary building gas treatment system in accordance with Surveillance 4.7.8.d.3. The Unit 2 Bases Section 4.7.1.2 has also been revised to indicate the current operational functions of the turbine driven auxiliary feedwater level control valves that were modified during the Unit 2 Cycle 6 refueling outage. These valves have been modified to be nonmodulating and automatically open upon an accident signal. The Unit 1 Bases have not been revised to include this information because the modification will not be completed until the Unit 1 Cycle 7 refueling outage. The enclosure provides the revised Bases pages affected by these revisions.

Please direct questions concerning this issue to Keith Weller at (615) 843-7527.

Sincerely,

R. H. Shell

R. H. Shell Manager SQN Site Licensing
