

September 8, 1995

Mr. John J. Barton
Vice President and Director
GPU Nuclear Corporation
Oyster Creek Nuclear Generating Station
P.O. Box 388
Forked River, New Jersey 08731

SUBJECT: NRC INSPECTION REPORT NO. 50-219/94-24 (REPLY)

Dear Mr. Barton:

This letter refers to your August 4, 1995 correspondence, in which you informed the NRC of schedule changes associated with commitments that were made in a response to Notice of Violations that are described in NRC Inspection Report 50-219/94-24.

Thank you for informing us of these changes. These actions will be examined during a future inspection of your licensed program.

Your cooperation with us is appreciated.

Sincerely,

William H. Ruland, Chief
Electrical Section
Division of Reactor Safety

Dear Sir:

SUBJECT: Oyster Creek Nuclear Generating Station
Docket No. 50-219
Inspection Report 50-219/94-24
Scheduling Changes to Commitments
Made in a Notice of Violation Reply

NRC Inspection Report 50-219/94-24 contained two violations of NRC requirements which dealt with design control and test control of Emergency Diesel Generator modifications conducted during our recent 15R outage.

Attachment I of our reply, dated March 16, 1995, stated revisions to the modification process plan and implementing procedures were to be issued by the end of the first quarter, 1995, and training on these enhancements was scheduled to be completed by the end of the second quarter, 1995. These due dates were not met.

The revisions to the plan and procedures are currently being presented to senior management. Subsequently, training on the revised plan and procedures which is necessary for full implementation is scheduled to be completed by the end of October, 1995.

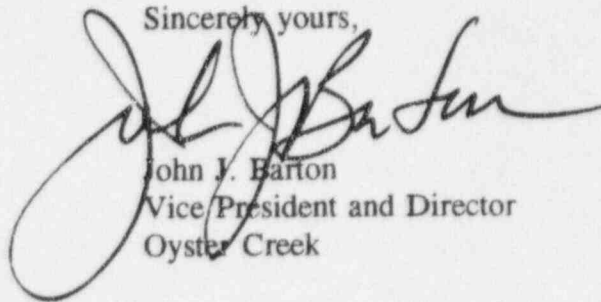

These delays are tied to implementation of the project management reengineering initiative which is a very large effort. Included in this effort is the revised project management process which we briefly mentioned in our cover letter dated November 17, 1994, to a violation contained in NRC Inspection Report 50-219/94-18.
