SAFETY FEATURES SEQUENCER

TRAIN B

ANALOG CHANNEL

OPERATIONAL TEST

AND

CHANNEL CALIBRATION

TABLE OF CONTENTS

1.0 PURPOSE

1.1 The purpose of this procedure is to provide instructions for Analog Channel Operational Test and Channel Calibration of Safety Features Sequencer Train B.

1.2 Performance of this procedure satisfies the Safety Features Sequencer Train B Analog Channel Operational Test and/or Channel Calibration Surveillance Requirement of Technical Specification 4.3.2.1, Table 4.3-2, functional Unit 6d, 8a and 8b.

1.3 This procedure shall be performed at a minimum test interval of 18 months for Channel Calibration and 31 days for Analog Channel Operational Test.

1.4 SCOPE

1.4.1 When this procedure is performed for scheduled Analog Channel Operational Test, the following sections shall be used: 1.0, 2.0, 3.0, 5.0 and subsections 4.1, 4.2.1 and 4.3.

1.4.2 When this procedure is performed for scheduled Channel Calibration, the following sections shall be used: 1.0, 2.0, 3.0, 5.0 and subsections 4.1, 4.2.2 thru 4.2.23 and 4.3.

1.4.3 When this procedure is performed for unscheduled maintenance, the following sections shall be used: 1.0, 2.0, 3.0, 5.0, and appropriate subsections of 4.0.

2.0 PRECAUTIONS AND LIMITATIONS

2.1 All steps in this procedure are to be performed in sequence except as noted. []

2.2 Performance of procedure step, as identified by a double asterisk (*/*), shall be initialed on "Checklist" except when recording data on applicable Data Sheet. []

2.3 The instrument may be located in a radiation area, service a contaminated process fluid, or be contaminated. If so, follow instructions on "Radiation Work Permit". []

2.4 For Safety-Related systems, an Independent Restoration Verification shall be performed, after completion of Test/Calibration, and initialed in "Restoration Verification" section of "Checklist". [ ]

2.5 Any calculations necessary for the performance of this procedure shall be shown on "Calculation Sheet". [ ]

2.6 Ensure that each lead (wire) to be lifted is marked with a completed and installed jumper and lifted wire tag. Instead of "Control No.", the "Procedure No." should be identified on the tag. [ ]

2.7 If this procedure is completed and temporary jumper(s) must remain installed and/or lifted wire(s) cannot be reconnected, a Jumper and Lifted Wire Clearance must be obtained per Procedure 00306-C, "Temporary Jumper And Lifted Wire Control". [ ]

2.8 This procedure may be performed in any plant operational mode. [ ]

2.9 If, during performance of this procedure, any of the following occur, immediately notify I&C Foreman:

2.9.1 Any personnel error, procedure inadequacy, or malfunction is identified which could prevent fulfillment of "Acceptance Criteria". [ ]

2.9.2 Any test exceeds specified limits. [ ]

3.0 PREREQUISITES OR INITIAL CONDITIONS

3.1 */* Notify Shift Supervisor, or designee, of work to be performed and obtain signature authorization. [ ]

3.2 */* Notify Reactor Operator (RO) the following may be erratic or inoperable during performance of this procedure and obtain RO signature. [ ]

3.2.1 Sequencer Train B [ ]

3.2.2 Annunciator 37A01 "4160V SWGR 1BA03 TROUBLE" [ ]

3.2.3 Annunciator 37A04 "SEQ B TROUBLE" [ ]

3.2.4 Annunciator 37B03 "SEQ B PNL DOORS OPEN" [ ]

3.2.5 Annunciator 37B04 "SEQ B SAFETY EQUIP FAILED TO START" [ ]

3.2.6 Annunciator 37C04 "RAT FDR BRKR TRN B FAILED TO OPEN" [ ]

3.2.7 Annunciator 37D04 "SEQ B IN MANUAL TEST" [ ]

3.3 TEST EQUIPMENT REQUIRED

3.3.1 Four (4) Fluke Model 8050A Digital Multimeters (DMM) or equivalent [ ]

3.3.2 Transducer Calibrator Model 6444 or equivalent [ ]

3.3.3 HP 5315A Frequency Counter or equivalent. [ ]

3.3.4 Tektronix 2235 Ocilloscope or equivalent. [ ]

3.4 Request RO to ensure the following alarm indications ILLUMINATE by performance of a lamp test:

a. Annunciator 36A01 - "4160 SWGR 1AA02 TROUBLE" [ ]

b. Annunciator 36A04 - "SEQ A TROUBLE" [ ]

c. Annunciator 36B03 - "SEQ A PNL DOORS OPEN" [ ]

d. Annunciator 36B04 - "SEQ A SAFETY EQUIP FAILED TO START" [ ]

e. Annunciator 36C04 - "RAT FDR BRKR TRN A FAILED TO OPEN" [ ]

f. Annunciator 36D04 - "SEQ A IN MANUAL TEST" [ ]

g. Annunciator 37A04 - "SEQ B TROUBLE" [ ]

3.5 */* Verify all Prerequisites or Initial Conditions are met. [ ]

4.0 MAIN BODY

4.1 REMOVE FROM SERVICE

4.1.1 */* Verify that annunciators listed below are EXTINGUISHED. If an annunciator is ILLUMINATED notify I&C Foreman.

NOTE

When in modes 5 and 6, the annunciators listed below may be ILLUMINATED.

a. 36A01 - "4160 SWGR 1AA02 TROUBLE" []

b. 36A04 - "SEQ A TROUBLE" []

c. 36B03 - "SEQ A PNL DOORS OPEN" []

d. 36B04 - "SEQ A SAFETY EQUIP FAILED TO START" []

e. 36C04 - "RAT FDR BRKR TRN A FAILED TO OPEN" []

f. 36D04 - "SEQ A IN MANUAL TEST" []

4.2 CHANNEL CALIBRATION
(Commitments 000732, 000734 and 007950)

NOTE

Refer to Figure 1 and 2
for test connection points.

4.2.1 Analog Channel Operational Test
(Commitments 000728, 000733 and 000735)

4.2.1.1 Verify the following lamps ILLUMINATE when "Lamp Test" toggle switch on panel A3 is depressed. (refer to Figure 1)

a. "SI Signal" []

b. "U/V Signal" []

c. "Undervoltage" []

d. "Seq Logic Failure" []

4.2.1.2 Verify the following lamps are EXTINGUISHED:

a. "SI Signal" []

b. "U/V Signal" []

c. "Undervoltage" []

d. "Seq Logic Failure" []

4.2.1.3 Connect a DMM to A-1, TB1, terminals 1(+) and 2(-). []

4.2.1.4 Position and hold panel A1 "Operate/Test" switch in "Test" position. (refer to Figure 1) []

NOTE

While adjusting the "Cal Adjust" pot the "Audible Alarm" will sound, the "Under Voltage Alarm" and "Seq. Logic Failure" bistables will ILLUMINATE on panel A3. The "Audible Alarm" can be silenced by pressing the ILLUMINATED bistable "Pushbutton".

4.2.1.5 */* Adjust "Cal Adjust" pot on A1 to the point at which DS1 on A3-1 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". (refer to Figure 2) []

4.2.1.6 */* Adjust "Cal Adjust" pot on A1 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". []

4.2.1.7 */* Adjust "Cal Adjust" pot on A1 to the point DS1 on A3-2 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". []

4.2.1.8 */* Adjust "Cal Adjust" pot on A1 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". []

4.2.1.9 */* Adjust "Cal Adjust" pot on A1 to point at which DS1 on A3-3 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". []

4.2.1.10 */* Adjust "Cal Adjust" on A1 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". []

4.2.1.11 Release A1 "Operate/Test" switch. []

4.2.1.12 */* Verify annunciator 37A04 "SEQ B TROUBLE" is ILLUMINATED. []

NOTE

Each bistable can be reset by depressing its ILLUMINATED pushbutton. When resetting bistables toggle switch "AT1 Reset" on card A5-16 must be depressed before "Seq. Logic Failure" bistable pushbutton can be reset.

4.2.1.13 Reset all bistables. [ ]
/

4.2.1.14 Connect a DMM to A-2, TB1, terminals 1(+) and 2(-). [ ]

4.2.1.15 Position and hold A2 "Operate/Test" switch in "Test" position. [ ]

4.2.1.16 Adjust "Cal Adjust" pot on A2 to point at which DS1 on
/ A3-5 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.17 Adjust "Cal Adjust" on A2 and record input reading at
/ point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.18 Adjust "Cal Adjust" pot on A2 to point at which DS1 on
/ A3-6 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.19 Adjust "Cal Adjust" on A2 and record input reading at
/ point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.20 Adjust "Cal Adjust" pot on A2 to point at which DS1 on
/ A3-7 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.21 Adjust "Cal Adjust" on A2 and record input reading at
/ point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.22 Release A2 "Operate/Test" switch. [ ]

4.2.1.23 Reset all bistables. [ ]
/

4.2.1.24 Connect a DMM to A-4, TB1, terminals 1(+) and 2(-). [ ]

4.2.1.25 Position and hold A4 "Operate/Test" switch in "Test" position. [ ]

4.2.1.26 Adjust "Cal Adjust" pot on A4 to point at which DS1 on
/ A3-9 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.27 Adjust "Cal Adjust" on A4 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.28 Adjust "Cal Adjust" pot on A4 to point at which DS1 on A3-10 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.29 Adjust "Cal Adjust" on A4 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.30 Adjust "Cal Adjust" pot on A4 to point at which DS1 on A3-11 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.31 Adjust "Cal Adjust" on A4 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.32 Release A4 "Operate/Test" switch. [ ]

4.2.1.33 Reset all bistables. [ ]
/

4.2.1.34 Connect a DMM to A-5, TB1, terminals 1(+) and 2(-). [ ]

4.2.1.35 Position and hold A5 "Operate/Test" switch in "Test" position. [ ]

4.2.1.36 Adjust "Cal Adjust" pot on A5 to point at which DS1 on A3-13 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.37 Adjust "Cal Adjust" on A5 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.38 Adjust "Cal Adjust" pot on A5 to point at which DS1 on A3-14 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.39 Adjust "Cal Adjust" on A5 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]
/

4.2.1.40 */* Adjust "Cal Adjust" pot on A5 to point at which DS1 on A3-15 ILLUMINATES and record input reading in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.41 */* Adjust "Cal Adjust" on A5 and record input reading at point bistable can be reset in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.42 Release A5 "Operate/Test" switch. [ ]

4.2.1.43 */* Reset all bistables. [ ]

4.2.1.44 Connect frequency counter to pins 52(+) and 81(-) at rear of A4-7 card (6N368-1). [ ]

4.2.1.45 */* Record clock output value in "As Found" section of "Analog Channel Operational Test Data Sheet 1". [ ]

4.2.1.46 */* If As Found readings are within limits specified on "Analog Channel Operational Test Data Sheet 1" and more accurate readings are not desired, record readings in "As Left" section of "Analog Channel Operational Test Data Sheet 1" and proceed to subsection 4.3. [ ]

4.2.1.47 If As Found readings are not within limits specified on "Analog Channel Operational Test Data Sheet 1" or more accurate values are desired, proceed as directed below:

a. If Technical Specifications Allowable Limits have been exceeded notify OSOS and I&C Foreman, then proceed as directed. [ ]

b. If Calibration Limits have been exceeded or more accurate values are desired, proceed to appropriate subsections. [ ]

4.2.1.48 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.1.49 When individual calibration(s) is(are) complete, repeat subsection 4.2.1 "Analog Channel Operational Test" to obtain As Left readings. [ ]

4.2.2 Channel Status Check (As Found)

4.2.2.1 Connect DMM to A-1, TB1, terminals 1 (+) and 2(-). [ ]

4.2.2.2 Position and hold A1 "Operate/Test" switch in "Test" position. []

NOTE

While adjusting the "Cal Adjust" pot the "Audible Alarm" will sound, the "Under Voltage Alarm" and "Seq. Logic Failure" bistables will ILLUMINATE on panel A3. The "Audible Alarm" can be silenced by pressing the ILLUMINATED bistable "Pushbutton".

4.2.2.3 */* Adjust "Cal Adjust" pot on A1 to the point at which DS1 on A3-1 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". (refer to Figure 1 & 2) []

4.2.2.4 */* Adjust "Cal Adjust" on A1 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". []

4.2.2.5 */* Adjust "Cal Adjust" pot on A1 to the point at which DS1 on A3-2 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". []

4.2.2.6 */* Adjust "Cal Adjust" on A1 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". []

4.2.2.7 */* Adjust "Cal Adjust" pot on A1 to the point at which DS1 on A3-3 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". []

4.2.2.8 */* Adjust "Cal Adjust" on A1 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". []

4.2.2.9 Release A1 "Operate/Test" switch. []

NOTE

Each bistable can be reset by depressing its ILLUMINATED pushbutton. When resetting bistables toggle switch "AT1 Reset" on card A5-16 must be depressed before "Seq. Logic Failure" bistable pushbutton can be reset.

4.2.2.10 Verify annunciator 37A04 "SEQ B TROUBLE" is ILLUMINATED. [ ]
/

4.2.2.11 Reset all bistables. [ ]
/

4.2.2.12 Connect a DMM to A-2, TB1, terminals 1 (+) and 2 (-). [ ]

4.2.2.13 Position and hold A2 "Operate/Test" switch in "Test" position. [ ]

4.2.2.14 Adjust "Cal Adjust" pot on A2 to the point at which DS1 on A3-5 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.15 Adjust "Cal Adjust" on A2 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.16 Adjust "Cal Adjust" pot on A2 to the point at which DS1 on A3-6 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.17 Adjust "Cal Adjust" on A2 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.18 Adjust "Cal Adjust" pot on A2 to the point at which DS1 on A3-7 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.19 Adjust "Cal Adjust" on A2 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.20 Release A2 "Operate/Test" switch. [ ]

4.2.2.21 Reset all bistables. [ ]
/

4.2.2.22 Connect a DMM to A-4, TB1, terminals 1 (+) and 2 (-). [ ]

4.2.2.23 Position and hold A4 "Operate/Test" switch in "Test" position. [ ]

4.2.2.24 Adjust "Cal Adjust" pot on A4 to the point at which DS1 on A3-9 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.25 Adjust "Cal Adjust" on A4 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.26 Adjust "Cal Adjust" pot on A4 to the point at which DS1 on A3-10 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.27 Adjust "Cal Adjust" on A4 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.28 Adjust "Cal Adjust" pot on A4 to the point at which DS1 on A3-11 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.29 Adjust "Cal Adjust" on A4 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.30 Release A4 "Operate/Test" switch. [ ]

4.2.2.31 Reset all bistables. [ ]
/

4.2.2.32 Connect a DMM to A-5, TB1, terminals 1 (+) and 2 (-). [ ]

4.2.2.33 Position and hold A5 "Operate/Test" switch in "Test" position. [ ]

4.2.2.34 Adjust "Cal Adjust" pot on A5 to the point at which DS1 on A3-13 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.35 Adjust "Cal Adjust" on A5 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.36 Adjust "Cal Adjust" pot on A5 to the point at which DS1 on A3-14 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.37 Adjust "Cal Adjust" on A5 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.38 Adjust "Cal Adjust" pot on A5 to the point at which DS1 on A3-15 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.39 Adjust "Cal Adjust" on A5 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 2". [ ]
/

4.2.2.40 Release A5 "Operate/Test" switch. []

4.2.2.41 Reset all bistables. []
/

4.2.2.42 Connect frequency counter to pins 52(+) and 81(-) at rear of A4-7 card (6N368-1). []

4.2.2.43 Record clock output value is "As Found" section of
/ "Data Sheet 2". []

4.2.3 Analog Isolator 1 Calibration
Location: A1

NOTE

Refer to Figure 1.

4.2.3.1 Open links AJ 4 and 5 in 1BA0300. []
/ (Independent Verification required)

4.2.3.2 Connect a DMM to the output of Analog Isolator terminals 8(+) and 9(-), and to input Analog Isolator terminals 12(+) and 11(-). []

4.2.3.3 Connect transducer calibrator to A-1, TB3, terminals 2 and 3. []

4.2.3.4 Adjust trarsducer calibrator to apply inputs listed
/ and record output readings in "As Found" section of "Data Sheet 3". []

4.2.3.5 If As Found readings are within limits specified
/ on "Data Sheet 3", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 3" and proceed to appropriate subsection. []

4.2.3.6 QC Hold Point
/

Obtain QC authorization to proceed before continuing with procedure. []

4.2.3.7 If As Found readings are not within limits specified on "Data Sheet 3", or more accurate readings are desired, proceed as follows:

a. Apply zero percent input and adjust "Zero" screw for 1.000V DC output []

b. Apply 100 percent input and adjust "Span" screw for 5.000V DC output. []

c. Repeat "Zero" and "Span" adjustments until no further adjustments are needed. []

4.2.3.8 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Left" section of "Data Sheet 3". []

4.2.4 AC Transmitter 1 Calibration
Location: A1

NOTE

Refer to Figure 1.

4.2.4.1 Connect a DMM to the input of AC transmitter terminals 1 and 2. []

4.2.4.2 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Found" section of "Data Sheet 4". []

4.2.4.3 */* If As Found readings are within limits specified on "Data Sheet 4", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 4" and proceed to step 4.2.4.7. []

4.2.4.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. []

4.2.4.5 If As Found readings are not within limits specified on "Data Sheet 4", or more accurate readings are desired, proceed as follows:

a. Apply zero percent input and adjust "Zero" screw for 1.000V DC output. []

b. Apply 100 percent input and adjust "Span" screw for 5.000V DC output. []

c. Repeat "Zero" and "Span" adjustments until no further adjustments are needed. []

4.2.4.6 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Left" section of "Data Sheet 4". []

4.2.4.7 Remove all test equipment. []

4.2.4.8 Close links AJ 4 and 5 in 1BA0300. []

4.2.4.9 */* Reset all bistables. []

4.2.5 Analog Isolator 2 Calibration
Location: A2

NOTE

Refer to Figure 1.

4.2.5.1 */* Open links AJ 6 and 7 in 1BA0300. (Independent Verification required) []

4.2.5.2 Connect a DMM to the output of Analog Isolator terminals 15(+) and 16(-), and to input of Analog Isolator terminals 12(+) and 11(-). []

4.2.5.3 Connect transducer calibrator to A-2, TB3 terminals 2 and 3. []

4.2.5.4 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Found" section of "Data Sheet 5". []

4.2.5.5 */* If As Found readings are within limits specified on "Data Sheet 5", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 5" and proceed to appropriate subsection. []

4.2.5.6 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. []

4.2.5.7 If As Found readings are not within limits specified on "Data Sheet 5", or more accurate readings are desired, proceed as follows:

a. Apply zero percent input and adjust "Zero" screw for 1.000V DC output. []

b. Apply 100 percent input and adjust "Span" screw for 5.000V DC output. []

c. Repeat "Zero" and "Span" adjustments until no further adjustments are needed. []

4.2.5.8 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Left" section of "Data Sheet 5". []

4.2.6 AC Transmitter 2 Calibration
Location: A2

NOTE

Refer to Figure 1.

4.2.6.1 Connect a DMM to the input of AC transmitter terminals 1 and 2. [ ]

4.2.6.2 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Found" section of "Data Sheet 6". [ ]

4.2.6.3 */* If As Found readings are within limits specified on "Data Sheet 6", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 6" and proceed to step 4.2.6.7. [ ]

4.2.6.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.6.5 If As Found readings are not within limits specified on "Data Sheet 6", or more accurate readings are desired, proceed as follows:

a. Apply zero percent input and adjust "Zero" screw for 1.000V DC output. [ ]

b. Apply 100 percent input and adjust "Span" screw for 5.000V DC output. [ ]

c. Repeat "Zero" and "Span" adjustments until no further adjustments are needed. [ ]

4.2.6.7 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Left" section of "Data Sheet 6". [ ]

4.2.6.7 Remove all test equipment. [ ]

4.2.6.8 Close links AJ 6 and 7 in 1BA0300. [ ]

4.2.6.9 */* Reset all bistables. [ ]

4.2.7 Analog Isolator 3 Calibration
Location: A4

NOTE

Refer to Figure 1.

4.2.7.1 */* Open links AJ 7 and 8 in 1BA0302. (Independent Verification required) [ ]

4.2.7.2 Connect a DMM to the output of Analog Isolator terminals 8(+) and 9(-), and to the input of Analog Isolator terminals 12(+) and 11(-). [ ]

4.2.7.3 Connect transducer calibrator to A-4, TB3 terminals 2 and 3. [ ]

4.2.7.4 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Found" section of "Data Sheet 7". [ ]

4.2.7.5 */* If As Found readings are within limits specified on "Data Sheet 7", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 7" and proceed to appropriate subsection. [ ]

4.2.7.6 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.7.7 If As Found readings are not within limits specified on "Data Sheet 7", or more accurate readings are desired, proceed as follows:

a. Apply zero percent input and adjust "Zero" screw for 1.000V DC output. [ ]

b. Apply 100 percent input and adjust "Span" screw for 5.000V DC output. [ ]

c. Repeat "Zero" and "Span" adjustments until no further adjustments are needed. [ ]

4.2.7.8 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Left" section of "Data Sheet 7". [ ]

4.2.8 AC Transmitter 3 Calibration
Location: A4

NOTE

Refer to Figure 1.

4.2.8.1 Connect a DMM to the input of AC transmitter terminals 1 and 2. [ ]

4.2.8.2 */* Adjust transducer calibrator to apply inputs listed and output record readings in "As Found" section of "Data Sheet 8". [ ]

4.2.8.3 */* If As Found readings are within limits specified on "Data Sheet 8", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 8", and proceed to step 4.2.8.7 [ ]

4.2.8.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.8.5 If As Found readings are not within limits specified on "Data Sheet 8", or more accurate readings are desired, proceed as follows:

a. Apply zero percent input and adjust "Zero" screw for 1.000V DC output. [ ]

b. Apply 100 percent input and adjust "Span" screw for 5.000V DC output. [ ]

c. Repeat "Zero" and "Span" adjustments until no further adjustments are needed. [ ]

4.2.8.6 */* Adjust transducer calibrator to apply inputs listed and record output readings on "As Left" section of "Data Sheet 8". [ ]

4.2.8.7 Remove all test equipment. [ ]

4.2.8.8 Close links AJ 7 and 8 in 1BA0302. [ ]

4.2.8.9 */* Reset all bistables. [ ]

4.2.9 Analog Isolator 4 Calibration
Location: A5

NOTE

Refer to Figure 1.

4.2.9.1 */* Open links AJ 9 and 10 in 1BA0302. [ ]
(Independent Verification required)

4.2.9.2 Connect a DMM to the output of Analog Isolator terminals 15(+) and 16(-), and to input of Analog Isolator terminals 12(+) and 11(-). [ ]

4.2.9.3 Connect transducer calibrator to A-5, TB3 terminals 2 and 3. [ ]

4.2.9.4 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Found" section of "Data Sheet 9". [ ]

4.2.9.5 */* If As Found readings are within limits specified on "Data Sheet 9", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 9" and proceed to appropriate subsection. [ ]

4.2.9.6 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.9.7 If As Found readings are not within limits specified on "Data Sheet 9", or more accurate readings are desired, proceed as follows:

a. Apply zero percent input and adjust "Zero" screw for 1.000V DC output. [ ]

b. Apply 100 percent input and adjust "Span" screw for 5.000V DC output. [ ]

c. Repeat "Zero" and "Span" adjustments until no further adjustments are needed. [ ]

4.2.9.8 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Left" section of "Data Sheet 9". [ ]

4.2.10 AC Transmitter 4 Calibration
Location: A5

NOTE

Refer to Figure 1.

4.2.10.1 Connect a DMM to the input of AC transmitter terminals 1 and 2. [ ]

4.2.10.2 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Found" section of "Data Sheet 10". [ ]

4.2.10.3 */* If As Found readings are within limits specified on "Data Sheet 10", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 10" and proceed to step 4.2.10.7. [ ]

4.2.10.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.10.5 If As Found readings are not within limits specified on "Data Sheet 10", or more accurate readings are desired, proceed as follows:

a. Apply zero percent input and adjust "Zero" screw for 1.000V DC output. [ ]

b. Apply 100 percent input and adjust "Span" screw for 5.000V DC output. [ ]

c. Repeat "Zero" and "Span" adjustments until no further adjustments are needed. [ ]

4.2.10.6 */* Adjust transducer calibrator to apply inputs listed and record output readings in "As Left" section of "Data Sheet 10". [ ]

4.2.10.7 Remove all test equipment. [ ]

4.2.10.8 Close links AJ 9 and 10 in 1BA0302. [ ]

4.2.10.9 */* Reset all bistables. [ ]

4.2.11 A3-1 Bistable Module Calibration -

4.2.11.1 Connect a DMM to A-1, TB1, terminals 1(+) and 2(-). []

4.2.11.2 Position and hold A1 "Operate/Test" switch in "Test" position. []

4.2.11.3 */* Adjust "Cal Adjust" on A1, to the point at which DS1 on A3-1 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 11". []

4.2.11.4 */* Adjust "Cal Adjust" on A1 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 11". []

4.2.11.5 */* If As Found readings are within limits specified on "Data Sheet 11" and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 11" and proceed to step 4.2.11.8. []

4.2.11.6 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. []

4.2.11.7 If As Found readings are not within limits specified on "Data Sheet 11", or more accurate readings are desired, proceed as follows:

NOTE

Refer to Figure 2 for adjustments.

a. INCREASE or DECREASE R40 for trip point. []

b. Adjust "Cal Adjust", note point which DS1 ILLUMINATES and reset bistable. []

c. */* If value is within limits specified on "Data Sheet 11", record in "As Left" section of "Data Sheet 11" and proceed to step 4.2.11.7e. []

d. */* If value is not within limits specified on "Data Sheet 11", repeat steps 4.2.11.7a and 4.2.11.7b until an acceptable value is obtained and record in "As Left" section of "Data Sheet 11". []

e. INCREASE input with "Cal Adjust" point at which bistable can be reset and trip the bistable []

f. */* If value is within limits specified on "Data Sheet 11" and a more accurate value is not desired, record in "As Left" (Reset) section of "Data Sheet 11" and proceed to step 4.2.11.8. [ ]

g. */* If value is not within limits specified on "Data Sheet 11", adjust R44 and repeat step 4.2.11.7e and record final value obtained in "As Left" section of "Data Sheet 11". [ ]

4.2.11.8 Connect DMM to A3-1, terminals J4(+) and J5(-). [ ]

4.2.11.9 Adjust R33 to 0.500V DC under trip point voltage. [ ]

4.2.11.10 Connect DMM to A3-1, terminals J3(+) and J5(-). [ ]

4.2.11.11 Adjust R34 to 0.500V DC over trip point voltage. [ ]

4.2.12 A3-2 Bistable Module Calibration

4.2.12.1 */* Adjust "Cal Adjust" on A1 to the point at which DS1 on A3-2 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 12". [ ]

4.2.12.2 */* Adjust "Cal Adjust" and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 12". [ ]

4.2.12.3 */* If As Found readings are within limits specified on "Data Sheet 12" and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 12" and proceed to step 4.2.12.6. [ ]

4.2.12.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.12.5 If As Found readings are not within limits specified on "Data Sheet 12", or more accurate readings are desired, proceed as follows:

NOTE

Refer to Figure for adjustments.

a. INCREASE or DECREASE R40 for trip point. [ ]

b. Adjust "Cal Adjust", note point which DS1 ILLUMINATES and reset bistable. [ ]

c. */* If value is within limits specified on "Data Sheet 12", record in "As Left" section of "Data Sheet 12" and proceed to step 4.2.12.5e. []

d. */* If value is not within limits specified on "Data Sheet 12", repeat steps 4.2.12.5a and 4.2.12.5b until an acceptable value is obtained and record in "As Left" section of "Data Sheet 12". []

e. INCREASE input with "Cal Adjust", note point at which bistable can be reset and trip the bistable. []

f. */* If value is within limits specified on "Data Sheet 12" and a more accurate value is not desired, record in "As Left" (Reset) section of "Data Sheet 12" and proceed to step 4.2.12.6. []

g. */* If value is not within limits specified on "Data Sheet 12", adjust R44 and repeat step 4.2.12.5e and record final value obtained in "As Left" section of "Data Sheet 12". []

4.2.12.6 Connect DMM to A3-2, terminals J4(+) and J5(-). []

4.2.12.7 Adjust R33 to 0.500V DC below trip point voltage. []

4.2.12.8 Connect DMM to A3-2, terminals J3(+) and J5(-). []

4.2.12.9 Adjust R34 to 0.500V DC above trip point voltage. []

4.2.13 A3-3 Bistable Module Calibration

4.2.13.1 */* Adjust "Cal Adjust" on A1 to the point at which DS1 on A3-3 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 13". []

4.2.13.2 */* Adjust "Cal Adjust" and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 13". []

4.2.13.3 */* If As Found readings are within limits specified on "Data Sheet 13" and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 13" and proceed to step 4.2.13.6. []

4.2.13.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. []

4.2.13.5 If As Found readings are not within limits specified on "Data Sheet 13", or more accurate readings are desired, proceed as follows:

NOTE

Refer to Figure 2 for adjustments.

a. INCREASE or DECREASE R40 for trip point. []

b. Adjust "Cal Adjust", note point which DS1 ILLUMINATES and reset bistable. []

c. */* If value is within limits specified on "Data Sheet 13", record in "As Left" section of "Data Sheet 13" and proceed to step 4.2.13.5e. []

d. */* If value is not within limits specified on "Data Sheet 13", repeat steps 4.2.13.5a and 4.2.13.5b until an acceptable value is obtained and record in "As Left" section of "Data Sheet 13". []

e. INCREASE "Cal Adjust", note point at which bistable can be reset and trip the bistable. []

f. */* If value is within limits specified on "Data Sheet 13" and a more accurate value is not desired, record in "As Left" (Reset) section of "Data Sheet 13" and proceed to step 4.2.13.6. []

g. */* If value is not within limits specified on "Data Sheet 13", adjust R44 and repeat step 4.2.13.5e and record final value obtained in "As Left" section of "Data Sheet 13". []

4.2.13.6 Connect DMM to A3-3, terminals J4(+) and J5(-). []

4.2.13.7 Adjust R33 to 0.500V DC below trip point voltage. []

4.2.13.8 Connect DMM to A3-3, terminals J3(+) and J5(-). []

4.2.13.9 Adjust R34 to 0.500V DC above trip point voltage. []

4.2.13.10 */* Release A1 "Operate/Test" switch and reset all bistables. []

4.2.14 A3-5 Bistable Module Calibration

4.2.14.1 Connect a DMM to A-2, TB1, terminals 1(+) and 2(-). []

4.2.14.2 Position and hold A2 "Operate/Test" switch in "Test" position. []

4.2.14.3 */* Adjust "Cal Adjust" on A2 to the point at which DS1 on A3-5 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 14". []

4.2.14.4 */* INCREASE "Cal Adjust" on A2 and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 14". []

4.2.14.5 */* If As Found readings are within limits specified on "Data Sheet 14" and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 14" and proceed to step 4.2.14.8. []

4.2.14.6 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. []

4.2.14.7 If As Found readings are not within limits specified on "Data Sheet 14", or more accurate readings are desired, proceed as follows:

NOTE

Refer to Figure 2 for adjustments.

a. INCREASE or DECREASE R40 for trip point. []

b. Adjust "Cal Adjust", note point at which DS1 ILLUMINATES and reset bistable. []

c. */* If value is within limits specified on "Data Sheet 14", record in "As Left" section of "Data Sheet 14" and proceed to step 4.2.14.7e. []

d. */* If value is not within limits specified on "Data Sheet 14", repeat steps 4.2.14.7a and 4.2.14.7b until an acceptable value is obtained and record in "As Left" section of "Data Sheet 14". []

e. INCREASE input with "Cal Adjust" ,note point bistable can be reset and trip the bistable []

f. */* If value is within limits specified on "Data Sheet 14" and a more accurate value is not desired, record in "As Left" (Reset) section of "Data Sheet 14" and proceed to step 4.2.14.8. []

g. */* If value is not within limits specified on "Data Sheet 14", adjust R44 and repeat step 4.2.14.7e and record final value obtained in "As Left" section of "Data Sheet 14". []

4.2.14.8 Connect DMM to A3-5, terminals J4(+) and J5(-). []

4.2.14.9 Adjust R33 to 0.500V DC under trip point voltage. []

4.2.14.10 Connect DMM to A3-5, terminals J3(+) and J5(-). []

4.2.14.11 Adjust R34 to 0.500V DC above trip point voltage. []

4.2.15 A3-6 Bistable Module Calibration

4.2.15.1 */* Adjust "Cal Adjust" on A2 to the point at which DS1 on A3-6 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 15". []

4.2.15.2 */* INCREASE "Cal Adjust" and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 15". []

4.2.15.3 */* If As Found readings are within limits specified on "Data Sheet 15" and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 15" and proceed to step 4.2.15.6. []

4.2.15.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. []

4.2.15.5 If As Found readings are not within limits specified on "Data Sheet 15", or more accurate readings are desired, proceed as follows:

NOTE

Refer to Figure 2 for adjustments.

a. INCREASE or DECREASE R40 for trip point []

b. Adjust "Cal Adjust", note point at which DS2 ILLUMINATES and reset bistable. []

c. */* If value is within limits specified on "Data Sheet 15", record in "As Left" section of "Data Sheet 15" and proceed to step 4.2.15.5e. []

d. If value is not within limits specified on "Data */* Sheet 15", repeat steps 4.2.15.5a and 4.2.15.5b until an acceptable value is obtained and record in "As Left" section of "Data Sheet 15". []

e. INCREASE input with "Cal Adjust", note point bistable can be reset and trip the bistable. []

f. If value is within limits specified on "Data */* Sheet 15" and a more accurate value is not desired, record in "As Left" (Reset) section of "Data Sheet 15" and proceed to step 4.2.15.6. []

g. If value is not within limits specified on "Data */* Sheet 15", adjust R44 and repeat step 4.2.15.5e and record final value obtained in "As Left" section of "Data Sheet 15". []

4.2.15.6 Connect DMM to A3-6, terminals J4(+) and J5(-). []

4.2.15.7 Adjust R33 to 0.500V DC below trip point voltage. []

4.2.15.8 Connect DMM to A3-6, terminals J3(+) and J5(-). []

4.2.15.9 Adjust R34 to 0.500V DC above trip point voltage. []

4.2.16 A3-7 Bistable Module Calibration

4.2.16.1 */* Adjust "Cal Adjust" on A2 to the point at which DS1 on A3-7 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 16". []

4.2.16.2 */* INCREASE "Cal Adjust" and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 16". []

4.2.16.3 */* If As Found readings are within limits specified on "Data Sheet 16", and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 16" and proceed to step 4.2.16.6. []

NOTE

Refer to Figure 2 for adjustments.

a. INCREASE or DECREASE R40 for trip point. []

b. Adjust "Cal Adjust", note point at which DS1 ILLUMINATES and reset bistable. []

c. */* If value is within limits specified on "Data Sheet 20", record in "As Left" section of "Data Sheet 20" and proceed to step 4.2.20.7e. []

d. */* If value is not within limits specified on "Data Sheet 20", repeat steps 4.2.20.7a and 4.2.20.7b until an acceptable value is obtained and record in "As Left" section of "Data Sheet 20". []

e. INCREASE input with "Cal Adjust", note point at which bistable can be reset and trip the bistable. []

f. */* If value is within limits specified on "Data Sheet 20" and a more accurate value is not desired, record in "As Left" (Reset) section of "Data Sheet 20" and proceed to step 4.2.20.8. []

g. */* If value is not within limits specified on "Data Sheet 20", adjust R44 and repeat step 4.2.20.7e and record final value obtained in "As Left" section of "Data Sheet 20". []

4.2.20.8 Connect DMM to A3-13, terminals J4(+) and J5(-). []

4.2.20.9 Adjust R33 to 0.500V DC below trip point voltage. []

4.2.20.10 Connect DMM to A3-13, terminals J3(+) and J5(-). []

4.2.20.11 Adjust R34 to 0.500V DC above trip point voltage. []

4.2.21 A3-14 Bistable Module Calibration -

4.2.21.1 */* Adjust "Cal Adjust" on A5 to the point at which DS1 on A3-14 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 21". [ ]

4.2.21.2 */* INCREASE input with "Cal Adjust" and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 21". [ ]

4.2.21.3 */* If As Found readings are within limits specified on "Data Sheet 21" and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 21" and proceed to step 4.2.21.6. [ ]

4.2.21.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.21.5 If As Found readings are not within limits specified on "Data Sheet 21", or more accurate readings are desired proceed as follows:

NOTE

Refer to Figure 2 for adjustments.

a. INCREASE or DECREASE R40 for trip point. [ ]

b. Adjust "Cal Adjust", note point at which DS1 ILLUMINATES and reset bistable. [ ]

c. */* If value is within limits specified on "Data Sheet 21", record in "As Left" section of "Data Sheet 21" and proceed to step 4.2.21.5e. [ ]

d. */* If value is not within limits specified on "Data Sheet 21", repeat steps 4.2.21.5a and 4.2.21.5b until an acceptable value is obtained and record in "As Left" section of "Data Sheet 21". [ ]

e. INCREASE input with "Cal Adjust", note point at which bistable can be reset and trip the bistable. [ ]

f. */* If value is within limits specified on "Data Sheet 21" and a more accurate value is not desired, record in "As Left" (Reset) section of "Data Sheet 21" and proceed to step 4.2.21.6. [ ]

g. */* If value is not within limits specified on "Data Sheet 21", adjust R44 and repeat step 4.2.21.5e and record final value obtained in "As Left" section of "Data Sheet 21". [ ]

4.2.21.6 Connect DMM to A3-14, terminals J4(+) and J5(-). [ ]

4.2.21.7 Adjust R33 to 0.500V DC below trip point voltage. [ ]

4.2.21.8 Connect DMM to A3-14, terminals J3(+) and J5(-). [ ]

4.2.21.9 Adjust R34 to 0.500V DC above trip point voltage. [ ]

4.2.22 A3-15 Bistable Module Calibration

4.2.22.1 */* Adjust "Cal Adjust" on A5 to the point at which DS1 on A3-15 ILLUMINATES and record input reading in "As Found" section of "Data Sheet 22". [ ]

4.2.22.2 */* INCREASE input with "Cal Adjust" and record input reading at point bistable can be reset in "As Found" section of "Data Sheet 22". [ ]

4.2.22.3 */* If As Found readings are within limits specified on "Data Sheet 22" and more accurate readings are not desired, record readings in "As Left" section of "Data Sheet 22" and proceed to step 4.2.22.6. [ ]

4.2.22.4 */* QC Hold Point

Obtain QC authorization to proceed before continuing with procedure. [ ]

4.2.22.5 If As Found readings are not within limits specified on "Data Sheet 22, or more accurate readings are desired, proceed as follows:

NOTE

Refer to Figure 2 for adjustments.

a. INCREASE or DECREASE R40 for trip point. [ ]

b. Adjust "Cal Adjust", note point at which DS1 ILLUMINATES and reset bistable. [ ]

c. */* If value is within limits specified on "Data Sheet 22", record in "As Left" section of "Data Sheet 22" and proceed to step 4.2.22.5e. [ ]

d. If value is not within limits specified on "Data Sheet 22", repeat steps 4.2.22.5a and 4.2.22.5b until an acceptable value is obtained and record in "As Left" section of "Data Sheet 22". */* []

e. INCREASE input with "Cal Adjust", note point at which bistable can be reset and trip bistable. []

f. If value is within limits specified on "Data Sheet 22" and a more accurate value is not desired, record in "As Left" (Reset) section of "Data Sheet 22" and proceed to step 4.2.22.6. */* []

g. If value is not within limits specified on "Data Sheet 22", adjust R44 and repeat step 4.2.22.5e and record final value obtained in "As Left" section of "Data Sheet 22". */* []

4.2.22.6 Connect DMM to A3-15, terminals J4(+) and J5(-). []

4.2.22.7 Adjust R33 to 0.500V DC below trip point voltage. []

4.2.22.8 Connect DMM to A3-15, terminals J3(+) and J5(-). []

4.2.22.9 Adjust R34 to 0.500V DC above trip point voltage. []

4.2.22.10 Release A5 "Operate/Test" switch and reset all bistables. */* []

4.2.23 Channel Status Check (As Left)

4.2.23.1 QC Hold Point */*

Obtain QC authorization to proceed before continuing with procedure. (Only if As Found readings on "Channel Status Check" are not within limits) []

4.2.23.2 Repeat subsection 4.2.2, "Channel Status Check", to obtain As Left readings. []

4.3 RESTORE TO SERVICE

4.3.1 Remove all test equipment connected during the course of this procedure. */* []

4.3.2 */* If not already performed, reset all-bistables. [ ]

4.3.3 */* If not already performed, place the following "Operate/Test" switches to "Operate" position:

a. A1 [ ]

b. A2 [ ]

c. A4 [ ]

d. A5 [ ]

4.3.4 */* If not already performed, close the following links:

a. 1BA0302 AJ 7,8,9 and 10 [ ]

b. 1BA0300 AJ 4,5,6 and 7 [ ]

4.3.5 */* Toggle switch "AT1 Reset" on card A5-16 and verify that AT1 continues to cycle from 00 to 71. [ ]

4.3.6 */* Verify Annunciator 37A04 "SEQ B TROUBLE" is EXTINGUISHED. [ ]

4.3.7 */* Verify sequencer reflects current plant conditions after it is restored to service. [ ]

4.3.8 */* Have an Independent Restoration Verification performed by designated personnel. [ ]

4.3.9 Notify RO, Train B sequencer has been returned to service. [ ]

4.3.10 */* Notify Shift Supervisor, or designee, of completion of work including test results and obtain signature on completion sheet. [ ]

5.0 ACCEPTANCE CRITERIA

5.1 The Acceptance Criteria for this procedure is that all devices listed in the appropriate subsection below are within limits specified on applicable Data Sheets.

5.1.1 Analog Channel Operational Test -

Bistable A3-1
Bistable A3-2
Bistable A3-3
Bistable A3-5
Bistable A3-6
Bistable A3-7
Bistable A3-9
Bistable A3-10
Bistable A3-11
Bistable A3-13
Bistable A3-14
Bistable A3-15

5.1.2 Channel Calibration

Bistable A3-1
Bistable A3-2
Bistable A3-3
Bistable A3-5
Bistable A3-6
Bistable A3-7
Bistable A3-9
Bistable A3-10
Bistable A3-11
Bistable A3-13
Bistable A3-14
Bistable A3-15
AC Transmitter 1
Analog Isolator 1
AC Transmitter 2
Analog Isolator 2
AC Transmitter 3
Analog Isolator 3
AC Transmitter 4
Analog Isolator 4

5.2 Satisfactory completion of this procedure has been met when I&C Foreman has evaluated data obtained per "Acceptance Criteria" of this procedure, reviewed, and signed Data Sheets provided.

Mr. J. P. Kane
Georgia Power Company
Inverness 40, 4th Floor
Birmingham, Ala.

Dear Mr. Kane,

Attached please find our response to the subject REA.

Attachment 1 provides our technical response and Attachment 2 provides engineering cost and schedule estimates for each item identified in the REA.

Per agreement with Mr. James Mintz of your organization, only engineering manhours are included in Attachment 2. Implementation cost estimates are not included. This was done to minimize the cost of developing this response. If you desire detailed implementation estimates for any of the items in the REA, we will be pleased to provide these under separate cover.

If you have any questions or require additional information, please contact James Bingham at extension 7127.

ATTACHMENT 1

TECHNICAL RESPONSE TO

REA VG-9010

This response consists of three sections. Section I provides an evaluation of the four methods listed in Item 1 of the REA to measure Reactor Coolant System (RCS) level during mid-loop operation. Section II looks at meaningful Residual Heat Removal (RHR) system parameters which can be utilized to detect impending or actual loss of RHR function. Section III evaluates the merits of an intelligent man-machine interface to monitor Decay Heat Removal function during mid-loop operation.

Section I: Reactor Coolant System Level Measurement.

Mid-Loop Operation is a mode of operation typified by the following conditions. The RCS has been cooled and depressurized to Cold Shutdown (Mode 5) conditions. The inventory in the RCS must be reduced to allow maintenance or inspection of the Reactor Head, Steam Generators or Reactor Coolant Pump Seals. The level in the primary system is lowered to one foot above the midline of the hot and cold legs. At this water level the air/water interface is at close proximity to the RHR suction nozzles located on the hot legs of Loops 1 and 4, and care must be taken to avoid air entrainment into the RHR pump suction. Air ingestion by the RHR pump can cause loss of pump function and possible pump damage, therefore it is extremely important for the operator to ensure that the water level is at or above the midline of the hot legs.

The level measurement system currently used during RCS draining and mid-loop operation is described in plant procedures (References 1, 2, and 3) and is shown in the attached Figure 1. This system conrists of two temporary differential pressure transmitters connected to the RCS hot legs via the connections for instruments LX-1310 and LX-1320. The wide range transmitter has a span 96 inches water gage and the narrow range transmitter has a span of 30 inches water gage. The signals from the wide range and narrow range transmitters are used to provide indication on the Main Control Board. The signal from the narrow range transmitter is also used to provide a low level alarm on a Main Control Board Annunciator. Clear plastic "Tygon" tubing is installed between an RCS drain line and the pressurizer vent line. This tygon tubing serves as a sight glass for the RCS Loop 1 cold leg. The tygon tubing and the Main Control Board Indicators are comparison checked at regular intervals during RCS draining and mid-loop operation.

With the current system, several factors can be identified which can lead to inaccuracies in the level indication. Differential pressure transmitters sense head and as such are subject to density differences between the sensing line fill fluid and the density

of the process fluid. In addition, temperature gradients within the process and within the surrounding environment will have an effect on the accuracy of the measurement. Static pressure changes will have no effect on the current configurations as the transmitters also sense the pressure in the pressurizer (and thus the hot leg air space pressure) and subtract this from the pressure sensed from the water space in the hot leg. The tygon tube is also a head sensing measurement device and suffers from density induced inaccuracies. Parallax error in reading the meniscus of the fluid in the tube can also cause measurement inaccuracies in the tygon tube. Because of the RCS drain line location used for sensing, the tygon tube shows cold leg level which may not be exactly the hot leg level under certain conditions, such as cold leg pressurization due to RHR system air ingestion.

Measuring level using large displacement head sensors, such as the tygon tube or a sight glass (option 1(b) of the REA), or a thermal dispersion level transmitter (option 1(c) of the REA) has an inherent drawback in that due to the piping runs necessary to satisfy ALARA concerns, time lags are built into the system. Time lags will also occur if the core becomes hydraulically dynamic (such as from boiling). This will tend to isolate the cold legs from the hot legs. These time delays will tend to reduce the time in which the operator can respond to decreases in the RCS level.

Measuring level on the hot legs using the differential pressure transmitters (option 1(a) of the REA) or using the ultrasonic level transmitter (option 1(d) of the REA) is impacted by the formation of vortices at the RHR pump suction nozzles. The vortices will cause erratic and erroneous level indications.

Because the operating range is small (within a few feet), it is extremely important that the reactor operator understand the limitations of particular level measurement system used and have confidence in the indications. Here, the sight glass or tygon tube shows its merits as a positive indication of level. Boiling in the core (and subsequent hydraulic isolation of the hot and cold legs) is not probable prior to a loss of RHR system function. The sight glass or tygon tube will not, however, indicate the presence of vortexing in the hot legs. Since differential pressure is used in a wide variety of level measurement applications throughout the plant, the operators are very familiar with the limitations of this type of measurement. An uncertainty analysis should be performed for these loops similar to Technical Specification indicator loops to establish the expected measurement inaccuracies. The thermal dispersion type level transmitter will have merits similar to the sight glass and can in fact

be incorporated into a configuration with a sight glass. The ultrasonic level transmitter is the most complex of the four options and is likely to find some operator concern over accuracy based on past operational problems with an ultrasonic level measurement device in the Back-flushable Filter System (BFS). The ultrasonic level measurement system being considered for this application does not have a configuration which would lead to problems similar to those associated with the BFS.

It appears from our evaluation that all four options are technically feasible. The differential pressure transmitters (option 1(a)) and the tygon tube (described in Reference 3) offer the least impact to existing procedures and plant hardware. In reference 4, section 3.1.2.1, the NRC staff states, "...ordinary plastic tubing [tygon] does not meet our concept of reliable instrumentation, and its use may not be accepted as a component in instrumentation systems." We concur with the staff position and recommend that a sight glass (option 1(b)) be used instead. We find that the separate hot leg taps for the differential pressure transmitters (one on Loop 1 and one on Loop 4) meet the intent of independence as described in Reference 4. Options 1(c) and 1(d) do not appear to have sufficient technical merits to justify their use on Plant Vogtle.

Section II: RHR System Performance Monitoring

Air ingestion in the RHR pumps can cause erratic pump behavior, loss of capacity, loss of flow and ultimately loss of RCS cooling with the potential for fuel damage and release of radioactivity.

The relative functional strengths of various RHR system parameters can be described as follows:

Pump motor current: This parameter is a very strong indicator of air entrainment in the pump. This parameter is particularly useful when trended due to the dynamic nature of instantaneous motor current readings. Indication and trending of RHR pump motor current is not available at the present time in the Main Control Room.

Pump noise: This parameter can be measured by acoustically reading the cavitation processes occurring inside the pump casing. This can be done fairly easily by mounting acoustic transducers on the pump casing or support structure. This parameter is also a strong indication of air entrainment in the system.

Pump suction and discharge pressure magnitude and flowrate: The magnitude of these parameters is only a weak indication of air entrainment; however, the time history of these parameters can provide a moderately strong indication that air entrainment has occurred. Pump suction pressure indication is currently only available on local pressure gages in the pump rooms. Pump discharge pressure and flowrate are available in the Main Control Room and are currently trended on the ERF Computer during RCS draining and mid-loop operation per Reference 1.

Unfortunately, the parameters listed above are only sufficient to indicate the presence of air already in the system. A system to detect the approach to conditions which are favorable to entraining air in the RHR system requires more than just these parameters, and will be discussed in the next section.

Of these parameters, it is noted that pump motor current (which provides one of the strongest indications of air ingestion) is not currently available in the Main Control Room. We feel it would be prudent engineering design to add the capability to monitor and trend this parameter on the ERF Computer. The motor current could then be trended alongside pump discharge pressure and flowrate measurements. The trends of these three parameters would be sufficient to alert the operator to take appropriate action in accordance with plant procedures (see Reference 5). We feel that pump noise monitoring and pump suction pressure indications are secondary indications and are not required to adequately monitor the system performance.

Section III: Decay Heat Removal Monitoring System (DHRMS).

This system is envisioned to consist of a man-machine interface with the capability to take several parameters associated with mid-loop operation and provide the operator with intelligent information regarding impending or actual loss of RHR system function. The primary purpose would be to alert the operator to take corrective action prior to significant air ingestion.

The DHRMS should provide additional time for operator action which will result in a decrease in the potential for loss of RHR transients, improved operator control of the primary system during draining and mid-loop operation and improved recovery from loss of RHR transients.

The improved and more consistent information displays may well lead to better operator trust of the instrumentation. The DHRMS can also provide historical trending for post-analysis of mid-loop transients.

The parameters that we recommend for inclusion in the DHRMS are RCS temperature, RCS level, RHR pump motor current, RHR pump discharge pressure and RHR system flowrate.

The development of the DHRMS can take many forms. The most cost effect approach seems to be to purchase functional algorithms which Westinghouse has developed for analyzing impending loss of RHR and implement these algorithms on the ERF Computer System. The software development should most probably be performed by the Georgia Power Company Engineering and Construction Services Department, which developed the ERF Computer operating system. As demonstrated on past software upgrades, this group this very qualified to develop the DHRMS. The DHRMS should be designed to be functional only during Mode 5 and only when requested by the Unit Shift Supervisor.

We feel that the DHRMS is a very useful plant upgrade, however, we do not feel that the implementation of this system is required at this time to meet technical or regulatory requirements. We feel it might be beneficial to model this type of system on the Plant Vogtle simulator on a trial basis in order to refine the specifications for the informational displays and alarms.

Section IV: Summary.

This section summarizes our response to this REA.

We feel that the most appropriate way to measure RCS level during draining and mid-loop operation is to implement item 1(a), differential pressure transmitters and item 1(b), sight glass at the earliest practical time. We do not recommend implementing item 1(c), thermal dispersion level transmitter or item 1(d), ultrasonic level transmitter at any time.

We recommend adding item 2(a), pump motor current indication and trending to the Main Control Room at the earliest practical time. We do not feel it is necessary to implement item 2(b), pump noise monitoring or item 2(c), pump suction pressure at any time.

We recommend that item 2(d), Decay Heat Removal Monitoring System (DHRMS) be implemented at some future date, perhaps after initial operator response testing utilizing the Plant Vogtle simulator.

LIST OF DESIGN ACTIVITIES

This item consists of providing two differential pressure transmitters located inside the Secondary Shield wall. These transmitters will require instrument supports. The instruments will not be installed during normal operation (due to radiation exposure) and therefore, the support design should allow for easy removal. The supports should be Seismic Category I, however the attachment of the instruments to the supports does not need to be Seismic Category I.

Permanent wiring will be provided between the location of the transmitters and the location of two of the accumulator level transmitters. A junction box will be provided for easy connection of the signals from the new transmitters to the loops for the accumulator level transmitters. None of the new wiring will penetrate Containment.

Permanent tubing will be installed between the RVLIS hot leg isolators (LX-1310 and LX-1320), the low pressure test port for instrument LT-459 and the 5-valve manifolds for the new transmitters. This tubing will be Project Class 424. The supports for this tubing must be Seismic Category I due to its location. The tubing design should incorporate adequate isolation of the Project Class 424 tubing from the Project Class 212 tubing connection points when not in mid-loop operation.

LIST OF MATERIALS

2 each	Differential Pressure Transmitters, Project Class 62J.
140 L.F.	3/8 inch O.D. tubing, seamless, 0.065 inch min. wall thickness, ASTM A-213, Gr. 304L or 316L, Project Class 424.
1 lot	Various tube fittings, 1500# compression and threaded, Project Class 424.
2 each	Instrument manifold valve, 5-way, Mark No. 5M15S1K.
23 each	Tubing supports.
2 each	Instrument supports.
18 each	Conduit supports.
100 L.F.	3/4 inch diameter, rigid steel conduit.
100 L.F.	Cable, Type CL67.
2 each	Pull boxes.
4 each	Junction boxes.

LIST OF DESIGN ACTIVITIES

This option involves replacing the temporary tygon tubing level gage with permanent hard piping and a permanent level glass. The hard piping will run between the tygon tubing connections shown on P&ID's 1/2X4DB111 and 1/2X4DB112. The piping should be Project Class 424 and must allow for positive isolation from the 212 piping system. The piping and supports must meet Seismic Category II over I criteria. There is no electrical work required for this item.

LIST OF MATERIALS

1 each	Level Glass, Project Class 424.
110 L.F.	1 inch diameter pipe, seamless, sch.40S, ASTM A-312, Gr. TP304L, Project Class 424.
1 lot	Various pipe fittings, 3000#, Socket Weld, ASTM A-182, Gr. F304L, Project Class 424.
4 each	Flanges with gaskets, bolts and nuts, 150# RFSW, ASTM A-182, Gr. F316L, Project Class 424.
15 each	Miscellaneous pipe supports.

LIST OF DESIGN ACTIVITIES

This option involves adding 3/4 inch O.D. tubing from two of the RCS drain lines to the pressurizer vent line. Installed in these lines will be Fluid Components Inc. CL-86 model thermal dispersion level transmitters. Cable and conduit will be provided to router the signal from these two devices to the accumulator level transmitters. The tubing should be Project Class 424 with adequate isolation from the Project Class 212 mainline piping. The piping and support system must meet Seismic Category II over I criteria. The level transmitters will be installed in 2 inch piping as shown on the e attached vendor information sheets.

LIST OF MATERIALS

2 each	CL-86 Continuous Level Monitoring System, Project Class 424/62J.
2 each	Sight glass for calibration of CL-86.
280 L.F.	3/4 inch O.D. tubing, seamless, 0.065 inch wall thickness min., ASTM A-213, Gr. 304L or 316L, Project Class 424.
6 L.F.	2 inch diameter pipe, seamless, sch.40S, ASTM A-312, Gr. TP304L, Project Class 424.
1 lot	Various tube fittings, 1500#, compression or threaded, Project Class 424.
2 each	Flanges with gaskets, bolts and nuts, 600# RFSW, ASTM A-182, Gr. F316L, Project Class 424.
40 each	Miscellaneous pipe supports.

LIST OF MATERIALS (cont.)

18 each Conduit supports.

2 each Junction boxes.

100 L.F. 3/4 inch diameter rigid steel conduit.

100 L.F. Cable, Type CL67.

October 1988 | Nuclear Power Industry Newsletter | Issue IX

The FCI CL86 Thermal Dispersion Continuous Level Sensor for RCS Mid-Loop Operation

In response to Generic Letter 87-12 and NRC Guidance on RCS Mid-Loop Operation while using Residual Heat Removal or Decay Heat Removal Systems, FCI is offering the CL86 Continuous Level Sensor in two installation configurations to satisfy RCS Mid-Loop Level Gauging requirements. Both configurations will provide independent indication of Hot Leg level in the control room. Redundant installations of either CL86 configuration or one of each type will satisfy NRC Guidance.

The CL86 Sensor Assembly

The model CL86 Continuous Level Sensor utilizes FCI's field-proven, proprietary Thermal Dispersion Operating Principle and No-Moving-Parts Design.

All sensing and heating elements on the CL86 are contained within mineral insulated stainless steel sheathed cable. The cable can be as small as 0.03 inch (0.76 mm) but typically has an 0.06 to 0.093 inch (1.5 to 2.4 mm) outside diameter. The cable is drawn in lengths up to several hundred feet but is ordinarily purchased in 100-foot lengths. A heater wire and a platinum resistance temperature detector (RTD) wire are encased in the stainless steel sheath and electrically insulated from the sheath and from each other with magnesium or aluminum oxide.

Two such mineral insulated cables are mounted within a nominal 2-inch diameter supporting stilling well assembly, though both cables - 0.06 inch (1.5 mm) or less in diameter - can be mounted inside a 0.25 inch (6.35 mm) diameter tube if desired (See Figure 1).

In one of the cables, constant electrical power is applied to the heater so that in air, the heated RTD is nominally 100°F (38.7°C) hotter than the unheated cable. The electronic power supply also employs detector circuits to measure and compare the electrical resistance of the heated and reference RTDs. In addition, the electronic assembly employs signal conditioning devices to convert the differential resistance signals to 4 to 20 mA or other customary output signals.

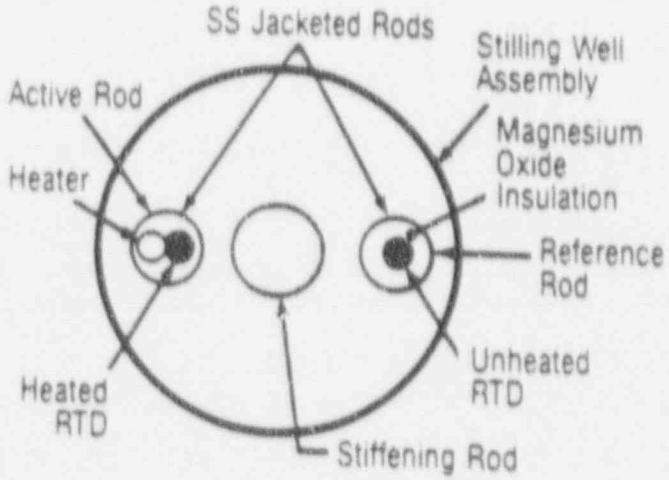

Figure 1. Cross sectional view, CL86 Sensor Assembly.

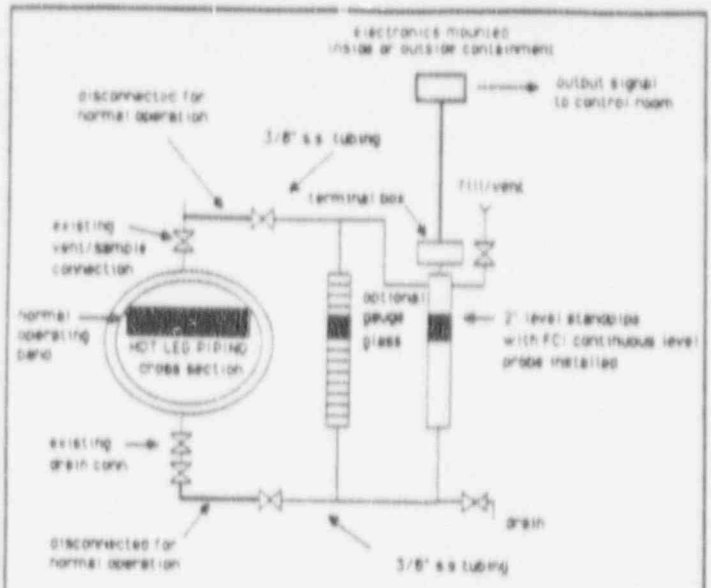
Thermal Dispersion Continuous Level Sensing

As noted above, the heated RTD is approximately 100°F (38.7°C) hotter than the reference RTD when in air or gas. If part of the sensing array is immersed in liquid, the liquid rapidly disperses the heat from the heater so that the two RTDs are at the same temperature (and resistance) over the immersed lengths. The change in resistance as a function of the immersed length is calibrated at the factory so the output signal shows a linear relationship with the amount of immersion. The simplified version described above is suitable for most applications. However, if the temperature and pressure of the vapor/gases and liquid media change, special compensators can be added as necessary to correct for these process variations.

FCI FLUID COMPONENTS INC.
1755 La Costa Meadows Dr., San Marcos, CA 92069 USA • (800)854-1993 • (619)744-6950 • TLX 695092 • FAX (619)744-6950



TYPICAL
MID-LOOP RCS LEVEL INSTALLATION
DETAIL

Ordinarily, the reference RTD applies sufficient compensation for the variable physical conditions of the process and added special compensators are not required.

In-Core Guide Tube Installation

FCI's Continuous Level Sensor is designed for installation in a spare guide tube which has the thimble removed and a vent path added to the pressurizer and/or reactor vessel head. This allows the media level in the reactor vessel to equalize with the media level in the guide tube. The level in the reactor vessel and guide tube is closely approximated to the level in the hot legs.

With this design, the level in the reactor vessel can be monitored during draindown operation from the seal table elevation to the lowest hot leg elevation. During this critical draining process, the control room operators will have continuous level indication displayed per plant design. The active length of the continuous level sensor is designed per customer specifications.

The connections on the FCI Continuous Level Sensor are designed to interface with existing seal table pressure connections. The vent isolation valves are closed during normal operation to isolate the vent lines. Calibration of the continuous level probe prior to draindown can be accomplished in place using a positive pressure to change the water level in the guide tube.

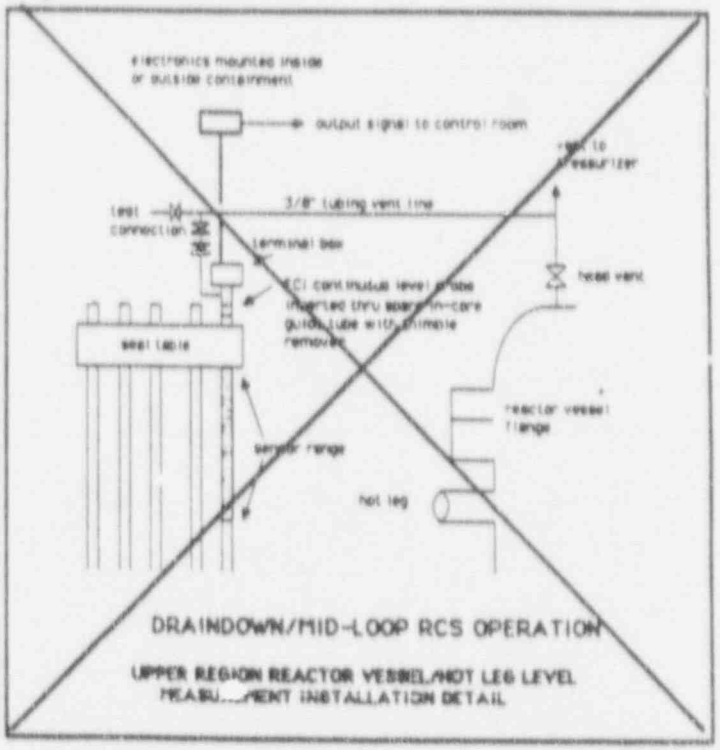
Advantages of In-Core Guide Tube Installations

- Wide range of level indication during draindown
- Ease of installation
- "Smart" performance
- Reduced radiation exposure (ALARA) on installation and operation
- Ease of calibration
- Accurate indication of level
- Reliable service-proven design
- 1E Safety-Related Qualification

Hot Leg Standpipe Installation

The FCI Continuous Level Sensor is designed to be installed in a standpipe configuration to provide level indication in the hot leg portion of the RCS. This design allows continuous level in the control room as well as local indication on the standpipe gauge glass. Functional and calibration testing on the sensor assembly and electronics can be performed using the gauge glass and drain and fill connections prior to draindown.

Vent lines to the pressurizer/reactor head are unnecessary with this installation configuration as the level in the standpipe will equalize with the hot leg level regardless of RCS pressure. During all operation modes other than draindown, the standpipe and gauge glass will be disconnected from the RCS loop.



DRAINDOWN/MID-LOOP RCS OPERATION

UPPER REGION REACTOR VESSEL/HOT LEG LEVEL MEASUREMENT INSTALLATION DETAIL

Advantages of Hot Leg Standpipe Installations

- Reliable local and remote indication
- Ease of calibration
- Accurate media level indication
- Bubbles and gas pocket errors eliminated
- "Smart" performance
- Reliable service-proven design
- IE Safety-Related Qualification

Call FCI today at **(800)854-1993** or **(619)744-6950** for more information on the FCI CL86 Continuous Level Sensor for Mid-Loop Level Gauging requirements.

FCI's CL86 is manufactured in accordance with one or more of the following patents: US patent Number 3,898,638 and patents pending.

LIST OF DESIGN ACTIVITIES

This would add strap-on ultasonic level transducers to the bottom of two of the RCS hot legs. The transducers are fed by a triaxial cable from a pre-amplifier assembly and a signal conditioner. The output of the signal conditioner (4 - 20 milliamps) will be routed to the accumulator level transmitters where it will be connected during mid-loop operation. The pre-amplifiers and signal conditioners will require Seismic Category I supports for Seismic Category II over I considerations. Due to radiation degradation, the pre-amplifiers and signal conditioners should either be mounted in a low radiation field or designed for easy removal prior to power operation of the NSSS.

LIST OF MATERIALS

2 each	Westinghouse Ultrasonic Level Measurement System, Project Class 61J.
150 L.F.	3/4 inch diameter rigid steel conduit.
100 L.F.	Cable, Type CL67.
100 L.F.	Cable, Tri-axial.
2 each	Junction boxes.
2 each	Pull boxes.
18 each	Conduit supports.
4 each	Instrument supports.

MANUAL SET NO. 7

BORON INJECTION FLOW PATH VERIFICATION - SHUTDOWN

1.0 PURPOSE

1.1 The purpose of this procedure is to verify that the valves in one operable boron injection flow path described in Technical Specification 3.1.2.1 are in the required position.

1.2 This surveillance satisfies Technical Specification 4.1.2.1b.

1.3 The frequency of this surveillance is at least once every 31 days.

2.0 APPLICABILITY

This surveillance is required for Modes 5 and 6.

3.0 PRECAUTIONS AND LIMITATIONS

NONE

INITIALS

4.0 PREREQUISITES OR INITIAL CONDITIONS

The Unit Shift Supervisor (USS) shall ensure this surveillance test does not affect other tests presently in progress or jeopardize plant operation prior to granting approval to perform this surveillance test.

USS APPROVAL

INFORMATION ONLY

INITIALS

5.0 INSTRUCTIONS

TEST STARTED _____ _____ _____
DATE TIME MODE

NOTES

a. Power operated valves (motor, air or solenoid) will be considered in the proper position if valves have power available and are capable of being repositioned to establish flow.

b. Valves or breakers should not be repositioned unless directed to do so by USS.

5.1 SELECT the operable borated water source(s) and circle same below.

BORIC ACID STORAGE TK REFUELING WATER STORAGE TK

5.2 For the selected boric acid source(s) VERIFY that 14225-1 "Operations Weekly Surveillance Logs" are active. INITIAL Figure 1.

5.3 If the Refueling Water Storage Tank (RWST) is the operable source, CHECK 14000-1 "Operations Shift & Daily Surveillance Logs" to verify RWST temperature is within limits. INITIAL Figure 1.

5.4 If the Positive Displacement Pump is utilized, VERIFY 14705-1, "Boron Injection Flow Rate Verification" is active, for the Positive Displacement Pump. INITIAL Figure 1.

5.5 If the Boric Acid Transfer Pump(s) are utilized VERIFY 14811-1, "Boric Acid Transfer Pumps and Discharge Check Valves Inservice Test" is active. INITIAL Figure 1.

5.6 If the Centrifugal Charging Pump(s) is utilized, VERIFY 14808-1, "Centrifugal Charging Pump And Check Valve Inservice Test" is active. INITIAL Figure 1.

5.7 COMPLETE Figure 1 by placing initials in the appropriate blocks for the boron injection flow path. Power operated valves must be operable and local manual valves must be open.

5.8 Using Figure 1, ENSURE a complete flow path from borated water source through operable pump to RCS exists.

6.0 ACCEPTANCE CRITERIA

The valves in the boron injection flow path shown on Figure 1 were found to be in the required status to provide at least one flow path of borated water to the RCS. All required surveillances are active.

Title: EMERGENCY BORATION FLOWPATH 05-55-90

Approved: _____ Operations Supervisor _____ Operations Superintendent

During the outage extensive work and clearances on CVCS will require special attention to our required Emergency Boration Flow Path.

In Mode 5 and 6 keep a laminated figure from 14406-1 at the RO desk. Mark-up each time you change the flowpath you are maintaining and copy the figure to the SSS.

1.0 PURPOSE

The purpose of this procedure is to verify the control system functions. This procedure is not intended to verify the calibration of the devices within the panel.

2.0 PRECAUTIONS AND LIMITATIONS

2.1 If only portions of the procedure are required:

2.1.1 Contact the Maintenance Foreman.

2.1.2 Use only the steps that apply.

2.1.3 Document the steps used in the comments section of the "Completion" or "Data" sheet.

2.1.4 N/A the steps that were not used.

2.2 Steps in this Procedure may be performed out of sequence only:

2.2.1 With prior approval of the Maintenance Foreman.

2.2.2 If they do not violate the intent of the Procedure.

2.2.3 Are documented in the "Comments" section of the "Completion" Sheet.

2.3 Maintenance area cleanliness in accordance with Procedure 21427-C, "Maintenance Cleanliness And Housekeeping Control".

3.0 PREREQUISITES AND INITIAL CONDITIONS

3.1 Prior to beginning work, notify QC if:

3.1.1 Hold points are indicated on the "Completion" AND/OR "Data Sheet".

3.1.2 The MWO/Work Package has a QC hold point.

3.2 Starting air pressure must be available to the control panel.

3.3 AC and DC power to the panel must be available.

3.4 Fuel supply to the engine is isolated and tagged out.

3.5 DG breaker is racked out to prevent inadvertent closure.

3.6 Local/Remote switch is in the remote position.

3.7 Both starting air receiver are above the low alarm set point.

4.0 TEST SET-UP MAINTENANCE MODE AND ENGINE ROLL CHECKOUT

4.1 TEST SET-UP

4.1.1 */* Verify all prerequisites and Initial conditions have been met.

4.1.2 */* Notify Shift supervisor of work to be performed.

4.1.3 */* Verify all applicable equipment is fully isolated and tagged in accordance with procedure 00304-C, "Equipment clearance and tagging".

4.1.4 */* Disconnect and lift instrument, control and power leads from the equipment as required.

a. Ensure each wire is marked so that it can be uniquely identified with its termination point.

b. Record their removal by wire number and termination point in the "Power and Signal Removal/Replacement Data" Sheet.

c. To install jumpers or lift wires, other than those directly associated with the equipment tag number(s) or scheme number(s) listed on the Work Order.

(1) Notify Shift Supervisor.

(2) Comply with his instructions.

NOTE

The following procedural steps are intended to prepare the engine control system for actual functional tests. All numbers shown in ( ) are wire numbers.

4.1.5 Trip - "Low Pressure Lube Oil":

4.1.5.1 */* Disconnect incoming tubing at bulkhead fitting E10-A in panel and cap bulkhead fitting.

4.1.5.2 */* Disconnect incoming tubing at bulkhead fitting E-10B in panel and cap bulkhead fitting.

4.1.5.3 */* Disconnect incoming tubing at bulkhead fitting E-10C in panel and cap bulkhead fitting.

4.1.6 Trip - "Low Pressure Turbocharger Lube oil":

4.1.6.1 */* Disconnect incoming tubing at bulkhead fitting E-92 in panel and cap bulkhead fitting.

4.1.7 Trip - "Low Pressure Jacket Water":

4.1.7.1 */* Disconnect incoming tubing at bulkhead fitting E-14 in panel and cap bulkhead fitting.

4.1.8 Open the following sliding link terminals:

4.1.8.1 */* A-Bank Starting Air Valve.
Terminals E5 (4) and E4 (2).

4.1.8.2 */* B-Bank Starting Air Valve.
Terminals L5 (105) and L4 (102).

4.1.8.3 Field Flash, Exciter Reg Enable.
Terminals E19 (53), E22 (56), E17 (51), and E21 (55).

4.1.8.4 */* Preset V.R. and Gov.:
Terminals E23 (57), E18 (52), and E24 (59).

4.1.8.5 */* Ready to Load, DG Brkr.:
Terminals F5 (77) and F6 (78).

4.1.8.6 */* Ready to Load, HVAC Sys.:
Terminals E57 (46) and E58 (47).

4.1.8.7 */* Ready to Load, Spare.
Terminals E59 (48) and E60 (49).

4.1.8.8 */* Start, Spare.
Terminals F1 (73) and F2 (74).

4.1.8.9 Stop, Spare.
/ Terminals F3 (75) and F4 (76).

4.1.8.10 Pre-position Gov and V.R.
/ Terminals L30 (170) and L31 (171).

4.1.8.11 186C Trip Delay
Terminals L32 (172) and L33 (173).

4.1.8.12 Field Flash, Exciter Reg Enable.
/ Terminals L23 (153), L20 (141), L21 (144), and L24 (155).

4.1.8.13 Trip 52G.
/ Terminals L51 (159) and L52 (160).

4.1.8.14 Emergency Stop.
/ Terminals L53 (164) and L54 (165).

4.1.8.15 Running, Spare.
/ Terminals L55 (166) and L56 (167).

4.1.8.16 Running, Spare.
/ Terminals L57 (168) and L58 (169).

4.1.8.17 Overspeed, Spare.
/ Terminals L59 (179) and L60 (180).

4.1.8.18 Running W/Delay.
/ Terminals L35 (175) and L36 (176).

4.1.8.19 Ready to Load - HVAC System.
/ Terminals L9 (137) and L10 (138).

4.1.8.20 Ready to Load - Spare.
/ Terminals L11 (139) and L12 (140).

4.1.8.21 Emergency Stop.
/ Terminals L14 (336) and L15 (337).

4.1.8.22 ERF Computer.
/ Terminals L49 (S4B1) and L50 (S4B2).

4.1.8.23 Emergency Stop Annunciation.
/ Terminals L25 (79-180) and L26 (90-180).

4.1.8.24 CC Fan #1.
/ Terminals C3 (244) and C9 (245).

4.1.8.25 CC Fan #2.
/ Terminals C5 (246) and C11 (247).

4.1.8.26 Generator Space Heater Control.
/ Terminals C7 (239) and C8 (240).

4.1.8.27 Running Contacts.
/ Terminals G3 (253), G4 (254), G5 (255), G6 (256), G7 (257), G8 (258), G9 (259), G10 (260), G11 (161), and G12 (162).

4.1.8.28 Running W/Delay Contacts.
/ Terminals G13 (263), G14 (264), G15 (265), G16 (266), G17 (267), G18 (268), G19 (269), G20 (270), G21 (271), G22 (272), G23 (273) and G24 (274).

4.1.8.29 Loss of DC Annunciation.
/ Terminals H1 (275) and H2 (276).

4.1.8.30 Mechanical Trouble Alarm.
/ Terminals H19 (298) and H20 (299).

4.1.8.31 Lockout Alarm.
/ Terminals H3 (277) and H4 (278).

4.1.8.32 Failed to Start.
/ Terminals H7 (281) and H8 (282).

4.1.8.33 Unit Available Local Control.
/ Terminals H9 (283) and H10 (284).

4.1.8.34 Unit Available.
/ Terminals H11 (285), H12 (286), H13 (287), H14 (288), H15 (289), and H16 (290).

4.1.8.35 Alarm.
/ Terminals H17 (296) and H18 (297).

4.1.8.36 Loss of DC Power.
/ Terminals A35 (612) and A36 (613).

4.1.8.37 DG Brkr Inop.
/ Terminals F7 (79) and F8 (80).

4.1.9 Open toggle switches to de-energize hourmeter.
/

4.1.10 A-Bank Starting Air Valve:

4.1.10.1 */* At on-engine "EJBA" Junction Box, disconnect engine wire number 4 and tape wire end.

4.1.11 B-Bank Starting Air Valve:

4.1.11.1 */* At on-engine "EJBB" Junction Box, disconnect engine wire number 105 and tape wire end.

4.1.12 */* Verify that all circuit breakers are closed.

4.1.13 */* Verify 60 psi at control air pressure gauge.

4.1.14 */* Verify 125 vdc across circuit breakers CB-1 and CB-2, CB-3 and CB-4.

4.1.15 Manual Permissive Start - "A" Side:

4.1.15.1 Jumper terminals E49 (3) and E50 (11).

4.1.16 Manual Permissive Start - "B" Side:

4.1.16.1 Jumper terminals L37 (106) and L42 (110).

4.2 MAINTENANCE MODE AND ENGINE ROLL CHECKOUT

4.2.1 */* Jumper terminals L45 (101) and L48 (129), Control Room permissive for maintenance mode.

4.2.2 Lockout Alarm & Unit Available.

4.2.2.1 */* Disconnect jumper across terminals H4 (278) and H12 (286) and verify:

4.2.2.2 */* Open contact across terminals H3 (277) and H4 (278).

4.2.2.3 */* Open contact across terminals H9 (283) and H10 (284).

4.2.2.4 */* Open contact across terminals H11 (285) and H12 (286).

4.2.2.5 */* Contact closure across terminals H13 (287) and H14 (288).

4.2.2.6 */* Contact closure across terminals H15 (289) and H16 (290).

4.2.3 Depress maintenance mode pushbutton and verify:

4.2.3.1 */* Engine shutdown cylinder is extended.

4.2.3.2 */* Maintenance lockout alarm is energized.

4.2.3.3 */* Unit available emergency status light is deenergized.

4.2.3.4 */* Group I pressure gauge indicates 0 psi.

4.2.3.5 */* The engine barring device lockout pin can be removed.

4.2.3.6 The stopping light is energized.

4.2.3.7 */* Contact closure across terminals B21 (565) and B22 (566).

4.2.3.8 */* Contact closure across terminals H3 (277) and H4 (278).

4.2.3.9 */* Contact closure across terminals H9 (283) and H10 (284).

4.2.3.10 */* Contact closure across terminals H11 (285) and H12 (286).

4.2.3.11 */* Open contact across terminals H13 (287) and H14 (288).

4.2.3.12 */* Open contact across terminals H15 (289) and H16 (290).

4.2.4 */* Reconnect jumper across H4 (278) and H12 (286).

4.2.5 Push engine roll pushbutton and verify:

4.2.5.1 */* 125 vdc across terminal E4 (2) and E5 (4), "A" side starting valve.

4.2.6 Push normal start pushbutton and verify:

4.2.6.1 */* No voltage across terminals E4 (2) and E5 (4), "A" side starting air valve.

4.2.6.2 */* No voltage across terminals L4 (102) and L5 (105), "B" side starting air valve.

4.2.7 */* Disconnect wire 564 (tape wire) at PS-46N and verify:

4.2.7.1 */* Relay R35 is de-energized.

4.2.7.2 */* Open contact across terminals B21 (565) and B22 (566).

4.2.7.3 */* Maintenance lockout alarm is de-energized.

4.2.8 Release engine barring device and verify:

4.2.8.1 */* Barring device engaged alarm energized.

4.2.8.2 */* Contact closure across terminals B27 (590) and B28 (591).

4.2.8.3 */* Relay R35 is energized.

4.2.9 Push return to operational pushbutton:

4.2.9.1 Push engine roll pushbutton and verify:

4.2.9.1.1 */* 125 vdc across terminals E4 (2) and E5 (4), "A" side starting valve.

4.2.9.2 Push normal start pushbutton and verify:

4.2.9.2.1 */* No voltage across terminals E4 (2) and E5 (4), "A" side starting air valve.

4.2.9.2.2 */* No voltage across terminals L4 (102) and L5 (105), "B" side starting air valve.

4.2.10 Lockout engine barring device and verify:

4.2.10.1 */* Barring device engaged alarm is de-energized.

4.2.10.2 */* Open contact across terminals B27 (590) and B28 (591).

4.2.10.3 Relay R35 is de-energized.
/

4.2.11 Reconnect wire 564 at pressure switch PS-46N, Maintenance lockout alarm and verify:
/

4.2.11.1 Relay R35 is energized.
/

4.2.11.2 Maintenance Lockout alarm is energized.
/

4.2.12 Push return to operational pushbutton and verify:

4.2.12.1 Engine shutdown cylinder is retracted.
/

4.2.12.2 Group I pressure gauge indicates 60 psi.
/

4.2.12.3 Maintenance lockout alarm is de-energized.
/

4.2.12.4 Unit available emergency status light is energized.
/

4.2.12.5 The engine barring device lockout pin is in the locked position.
/

4.2.12.6 The stopping light is de-energized.
/

4.2.12.7 Ensure barring device is retracted.
/

4.2.12.8 Locking pin is installed.
/

4.2.13 Push engine roll pushbutton and verify:

4.2.13.1 No voltage across terminals E4 (2) and E5 (4), "A" side starting air valve.
/

4.2.14 Open circuit breakers CB-1 and CB-2 and verify:

4.2.14.1 No voltage across solenoid valve Sol 202-6A ("A" circuit DC Power Solenoid), wires 1 and 2.
/

4.2.14.2 "A" power available light is de-energized.
/

4.2.14.3 */* Engine control panel "A" failure (pos 8-2) alarm is energized.

4.2.14.4 */* Contact closure across terminals A17 (466) and A18 (467).

4.2.15 */* Remove timer TD-1B from relay socket, field flash timer.

4.2.16 Push normal start push button and verify:

4.2.16.1 */* 125 vdc across terminals L4 (102) and L5 (105), starting air valve for 5 seconds.

4.2.16.2 */* Failure to start alarm is energized after 5 seconds.

4.2.16.3 */* Relay R1 is de-energized.

4.2.16.4 */* Contact closure across terminals H7 (281) and H8 (282).

4.2.16.5 */* Contact closure across terminals K33 (581) and K34 (582).

4.2.16.6 */* Relay R35 is energized.

4.2.16.7 */* Horn is energized.

4.2.17 Push the annunciator silent, acknowledge and reset pushbutton and verify:

4.2.17.1 */* Horn is de-energized.

4.2.17.2 */* Open contact across terminals H7 (281) and H8 (282).

4.2.17.3 */* Relay R35 is de-energized.

4.2.17.4 */* Failed to start alarm is de-energized.

4.2.18 Connect frequency generator to terminals L7 (118) and L8 (119). Push normal start pushbutton again and within 5 seconds turn on generator to 490 Hz (450 RPM) and verify:

4.2.18.1 Contact closure across terminals L35 (175) and L36 (176) after approx. 60 sec delay.
/

4.2.18.2 Contact closure across terminals L32 (172) and L33 (173) after approx. 60 sec delay.
/

4.2.18.3 No voltage across terminal L4 (102) and L5 (105), starting air valve.
/

4.2.18.4 Contact closure across terminals L55 (166) and L56 (167).
/

4.2.18.5 Open contact across terminals L57 (168) and L58 (169).
/

4.2.18.6 Unit running light is energized.
/

4.2.18.7 Failed to start alarm remains de-energized.
/

4.2.18.8 Closure across terminals L23 (153) and L21 (144), field flash pressure switch.
/

4.2.18.9 Open circuit across terminal L24 (155) and L23 (153), exciter reg enamble.
/

4.2.18.10 Contact closure across terminals L49 (S4B1) and L50 (S4B2), ERF computer.
/

4.2.18.11 Relays R1, R1AUX1, R2, R2AUX2 and R8 are energized.
/

4.2.18.12 Contact closure across terminals C3 (244) and C9 (245), CC Fan #1.
/

4.2.18.13 Contact closure across terminals C5 (246) and C11 (247), CC Fan #2.
/

4.2.18.14 Contact closure across terminals G3 (253) and G4 (254).
/

4.2.18.15 Contact closure across terminals G5 (255) and G6 (256).
/

4.2.18.16 Open contact across terminals G7 (257) and G8 (258).
/

4.2.18.17 Open contact across terminals G9 (259) and G10 (260).
/

4.2.18.18 Open contact across terminals G11 (261) and G12 (262).
/

4.2.18.19 Contact closure across terminals G13 (263) and G14 (264).
/

4.2.18.20 Contact closure across terminals G15 (265) and G16 (266).
/

4.2.18.21 Contact closure across terminals G17 (267) and G18 (268).
/

4.2.18.22 Open contact across terminals G19 (269) and G20 (270).
/

4.2.18.23 Open contact across terminals G21 (271) and G22 (272).
/

4.2.18.24 Open contact across terminals G23 (273) and G24 (274).
/

4.2.19 Push Maintenance Pushbutton and verify:
/

4.2.19.1 Maintenance mode alarm remains de-energized.
/

4.2.20 Push local stop push button and turn off frequency generstor and verify:

4.2.20.1 Open circuit across terminals L23 (153) and L21 (144), field flash pressure switch.
/

4.2.20.2 Engine shutdown cylinder is extended and verify that there is no air leakage at the pneumatic cylinder.
/

4.2.20.3 After approx. 120 sec, verify engine shutdown cylinder is retracted and vented.
/

4.2.20.4 Open contact across terminals L55 (166) and L56 (167).
/

4.2.20.5 Contact closure across terminals L57 (168) and L58 (169).
/

4.2.20.6 Unit running light is de-energized.
/

4.2.20.7 Open contact across terminals L35 (175) and L36 (176).
/

4.2.20.8 */* Open contact across terminals L32 (172) and L33 (173).

4.2.20.9 */* Open contact across terminals L49 (S4B1) and L50 (S4B2), ERF computer.

4.2.21 Push maintenance pushbutton and verify:

4.2.21.1 */* Maintenance mode alarm is energized.

4.2.22 Push return to operational pushbutton and verify:

4.2.22.1 */* Maintenance mode alarm is de-energized.

4.2.23 Install timer TD-1B into Relay Socket, field flash timer.

4.2.24 Momentarily jumper terminals L37 (106) and L43 (104), remote emergency start and verify:

4.2.24.1 */* 125 VDC across terminals L4 (102) and L5 (105), starting air solenoid.

4.2.24.2 Push maintenance mode pushbutton and verify:

4.2.24.2.1 */* Maintenance mode alarm indication remains de-energized.

4.2.24.3 */* Contact closure across terminals L23 (153) and L21 (144), field flash.

4.2.24.4 */* Turn on frequency generator (setting should be at 490 Hz). Check that relays R1, R1A and R2 are energized, if not, manually set relays.

4.2.24.5 */* Closure across Terminals L23 (153) and L21 (144), field flash pressure switch.

4.2.24.6 */* Safety injection signal light is energized.

4.2.24.7 */* Shutdown system active light de-energized.

4.2.24.8 */* No voltage across terminal L4 (102) and L5 (105), starting air solenoid.

4.2.24.9	*/*	Verify jumper across terminals L37 (106) and L43 (104)is removed.
4.2.24.10	*/*	Emergency start alarm is energized.
4.2.24.11	*/*	Contact closure across terminals B33 (601) and B34 (602), emergency start remote annunciator.
4.2.24.12	*/*	Contact closure across terminals L22 (151) and L24 (155), exciter reg enable.
4.2.25		Push normal stop push button and verify:
4.2.25.1	*/*	The stopping light remains de-energized.
4.2.26		Disconnect incoming tubing at bulkhead fitting E-18, high temp lube oil shutdown, after 60 seconds from completing step 24 above and verify:
4.2.26.1	*/*	Group I pressure gauge reads below 25 psi.
4.2.26.2	*/*	Engine shutdown cylinder is not extended.
4.2.26.3	*/*	Trip high temp lube oil alarm is energized.
4.2.26.4	*/*	The stopping light is not energized.
4.2.26.5	*/*	Contact closure across terminals J9 (426) and J10 (427), trip high temp lube oil remote annunciator.
4.2.26.6	*/*	Contact closure across terminals 6 and 7 at annunciator pos 5-1, trip high temp lube oil, spare contact.
4.2.27	*/*	Re-connect incoming tubing at bulkhead fitting E-18, high temp lube oil shutdown and verify:
4.2.27.1	*/*	Group I pressure gauge reads 60 PSI.
4.2.27.2	*/*	Trip high temp lube oil alarm is de-energized.
4.2.27.3	*/*	Open contact across terminals J9 (426) and J10 (427), trip high temp lube oil remote annunciator.

4.2.27.4 */* Open contact across terminals 6 and 7 at annunciator pos 5-1.

4.2.28 Push reset from loca pushbutton. Remove plug from bulkhead fitting E-92, trip low pressure turbo oil and turn off frequency generator and verify:

4.2.28.1 */* The stopping light is energized.

4.2.28.2 */* Trip low Pressure turbo oil alarm is energized.

4.2.28.3 */* Contact closure across terminals J21 (457) and J22 (458). Trip low press turbo oil remote annunciator.

4.2.28.4 */* Contact closure across terminals 10 and 11 at annunciator pos 5-2, trip low press turbo oil spare contact.

4.2.28.5 */* Engine shutdown cylinder is extended.

4.2.29 Manually transfer R10B relay contacts at the same time, push maintenance pushbutton and verify:

4.2.29.1 */* Maintenance mode alarm indication remains de-energized.

4.2.30 */* Reinstall plug on bulkhead fitting E-92. Trip low pressure turbo oil and jumper contact SS3B wires 101 and 123, ready to load, at "B: side speed transmitter and jumper wires 123 and 124 at relay UVR1B, under voltage relay and verify:

4.2.30.1 */* Relay R-11B is energized.

4.2.30.1.1 */* Contact closure across terminals L9 (137) and L10 (138), running-HVAC system.

4.2.30.1.2 */* Contact closure across terminals L11 (139) and L12 (140), running-spare.

4.2.30.1.3 */* Contact closure across terminals F5 (77) and F6 (78), ready to load - DG breaker.

4.2.30.1.4 */* Ready to load light is energized.

4.2.30.2 */* Remove jumper at SS3B contact, wires 101 and 123, ready to load at "B: side speed transmitter and remove jumper across wires 123 and 124 and verify:

4.2.30.2.1 */* Open contact across terminals L9 (137) and L10 (138), running-HVAC system.

4.2.30.2.2 */* Open contact across terminals L11 (139) and L12 (140), running-spare.

4.2.30.2.3 */* Open contact across terminals F5 (77) and F6 (78), ready to load-DG breaker.

4.2.30.2.4 */* Ready to load light is de-energized.

4.2.31 Release Emergency Start Button and turn on frequency generator and verify:

4.2.31.1 */* No voltage across terminal L4 (102) and L5 (105), starting air solenoid.

4.2.31.2 */* Relay R5B is energized.

4.2.32 Trip overspeed trip valves on engine and then turn off frequency generator and verify:

4.2.32.1 */* Relay R23B is energized.

4.2.32.2 */* Contact closure across terminals L51 (159) and L52 (160), trip 52G.

4.2.32.3 */* Contact closure across terminals L53 (164) and L54 (165), emergency stop.

4.2.32.4 */* Contact closure across terminals L59 (179) and L60 (180), overspeed-spare.

4.2 32.5 */* Contact closure across terminals L14 (336) and L15 (337), emergency stop.

4.2.32.6 */* Emergency stop light energized.

4.2.32.7 */* The stopping light energized.

4.2.32.8 */* Pressure at cylinder port of solenoid 3B.

4.2.32.9 */* Unit available emergency status light is de-energized.

4.2.32.9.1 */* Momentarily jumper pressure switch PS-23N, wires 225 and 226 and note no change in light status.

4.2.32.10 */* Overspeed trip alarm is energized.

4.2.32.11 */* Contact closure across terminal A9 (442) and A10 (443), overspeed remote annunciator.

4.2.32.12 */* Relay R35 is energized, locked out alarm.

4.2.32.12.1 Momentarily open sliding link F11 (79) and reset annunciator and verify:

4.3.32.12.1.1 */* Relay R35 remains energized, locked out alarm.

4.2.32.12.1.2 */* Disabled non-reset of emergency trip alarm is de-energized.

4.2.32.13 Push normal start pushbutton and verify:

4.2.32.13.1 */* No voltage across terminals E5 (4) and E4 (2), A-Bank starting air valve.

4.2.32.13.2 */* No voltage across terminals L5 (105) and L4 (102), B-Bank starting air valve.

4.2.33 */* Verify that break glass cover is reinstalled on emergency start pushbutton.

4.2.34 Depress reset from LOCA pushbutton.

4.2.35 Reset overspeed trip valves located on engine and verify:

4.2.35.1 */* Open contact across terminals L59 (179) and L60 (180), overspeed-spare.

4.2.35.2 */* Overspeed Trip alarm is de-energized.

4.2.35.3 */* Open contact across terminals A9 (442) and A10 (443).

4.2.36 Push emergency stop reset pushbutton and verify:

4.2.36.1 */* Relay R23B is de-energized.

4.2.36.2 */* Open contact across terminals L51 (159) and L52 (160), trip 52G.

4.2.36.3 */* Open contact across terminals L53 (164) and L54 (165), emergency stop.

4.2.36.4 */* Open contact across terminals L14 (336) and L15 (337), emergency stop.

4.2.36.5 */* Emergency stop light light de-energized.

4.2.36.6 The stopping light de-energized.

4.2.36.7 */* Relay R35 is de-energized, locked out alarm.

4.2.37 Jumper across terminals L39 (101) and L38 (113), loss of offsite power and verify:

4.2.37.1 */* 125 VDC across terminals L4 (102) and L5 (105), starting air solenoid.

4.2.37.2 */* DG auto start signal light is energized.

4.2.38 Remove jumper across terminals L39 (101) and L38 (113), loss of offsite power and verify:

4.2.38.1 */* No voltage across terminals L4 (102) and L5 (105), starting air solenoid.

4.2.38.2 */* DG auto start singal light is de-energized.

4.2.39 Manually transfer R6B relay contacts and at the same time push emergency stop reset button and verify:

4.2.39.1 */*	Contact closure across terminals L51 (159) and L52 (160).
4.2.39.2 */*	Release emergency stop reset button and then R6B relay contacts and verify:
4.2.39.2.1 */*	Relay R23B is energized.
4.2.39.2.2 */*	Contact closure across terminals L51 (159) and L52 (160).
4.2.39.2.3 */*	Contact closure across terminals L53 (164) and L54 (165).
4.2.40	Push emergency stop reset button to reset relay R23B.
4.2.41	Push emergency stop pushbutton and verify:
4.2.41.1 */*	Disabled non-reset of emergency trip alarm is energized.
4.2.41.2 */*	Contact closure across terminals A33 (503) and A34 (504), emergency trip-remote annunciator.
4.2.41.3 */*	Relay R35 is energized, locked out alarm.
4.2.42	Push emergency stop reset pushbutton and verify:
4.2.42.1 */*	Disabled non-reset of emergency trip alarm is de-energized.
4.2.42.2 */*	Open contact across terminals A33 (503) and A34 (504), emergency trip-remote annunciator.
4.2.42.3 */*	Relay R35 is de-energized, locked out alarm.
4.2.43	Disconnect frequency generator from terminals L7 (118) and L8 (119).
4.2.44 */*	Disconnect jumper across terminals L45 (101) and L48 (129), control room permissive for maintenance mode:
4.2.45	Close Circuit Breakers CB-1 and CB-2, and verify:

4.2.45.1	*/*	125 vdc across solenoid valve Sol 202-6A, "A" circuit DC power, wires 1 and 2.
4.2.45.2	*/*	"A" power available light is energized.
4.2.45.3	*/*	Reset annunciator and verify at engine control power A failure (pos 8-2) alarm is de-energized.
4.2.45.4	*/*	Open contact across terminals A17 (466) and A18 (467).
4.2.46		Open circuit breakers CB-3 and CB-4 and verify:
4.2.46.1	*/*	No voltage across solenoid valve Sol 202-6B, "B" circuit DC power, wires 101 and 102.
4.2.46.2	*/*	"B" power available light is de-energized.
4.2.46.3	*/*	Engine control power B Failure (pos 9-2) alarm is energized.
4.2.46.4	*/*	Contact closure across terminals A19 (469) and A 20 (470).
4.2.47		Remove timer TD-1A from socket, field flash timer:
4.2.48		Push normal start pushbutton and verify:
4.2.48.1	*/*	125 vdc across terminal E4 (2) and E5 (4), solenoid for 5 seconds.
4.2.48.2	*/*	Failure to start alarm is energized after 5 seconds.
4.2.49		Connect frequency generator to terminals E7 (20) and E8 (21). Push normal start pushbutton again and within 5 sec turn on generator to 490 Hz (450 RPM) and verify:
4.2.49.1	*/*	No voltage across terminal E4 (2) and E5 (4), starting air solenoid.
4.2.49.2	*/*	Closure across panel terminals E19 (53) and E17 (51), field flash pressure switch.
4.2.49.3	*/*	Open circuit across terminals E21 (55) and E19 (53), exciter reg enable.

4.2.49.4 */* Contact closure across terminals F1 (73) and F2 (74), start singal for customer's use.

4.2.49.5 */* Starting light is energized, for 5 seconds.

4.2.49.6 */* Relay R1 is energized, run/stop relay.

4.2.49.7 */* The running light is energized.

4.2.50 Disconnect incoming tubing line E-19, high temperature main bearing shutdown, to allow the system to shutdown, then turn off frequency generator and verify:

4.2.50.1 */* Engine shutdown cylinder is extended for approximately 2 minutes.

4.2.50.2 */* Closure across terminals E21 (55) and E19 (53), exciter reg enable after approx 2 minutes.

4.2.50.3 */* Trip high temperature engine main bearing alarm is energized.

4.2.50.4 */* Open circuit across terminals E19 (53) and E17 (51), field flash pressure switch.

4.2.50.5 */* Relays R1, R1 aux, and R2 are reset.

4.2.50.6 */* Contact closure across terminals L30 (170) and L31 (171) for approximately 2 minutes, pre-position gov and V.R.

4.2.50.7 */* Contact closure across terminals F3 (75) and F4 (76) for approximately 2 minutes, stop signal.

4.2.50.8 */* Unit running light is de-energized.

4.2.50.9 */* Unit stopping light is energized for approximately 2 minutes.

4.2.50.10 */* Contact closure across terminals A3 (432) and A4 (433), main bearing trip-remote annunciator.

4.2.50.11 */* Contact closure across terminals 6 and 7 at annunciator pos. 7-1, main bearing Trip.

4.2.51	After reconnecting line E-19, main bearing trip, verify:
4.2.51.1 */*	Trip high temp engine bearings alarm is de-energized.
4.2.51.2 */*	Contact is open across terminals A3 (432) and A4 (433), main bearing trip-remote annunciator.
4.2.51.3 */*	Contact is open across terminals 6 and 7 at annunciator pos 7-1, main bearing trip.
4.2.52	Install timer TD-1A into relay socket, field flash timer.
4.2.53	Momentarily jumper terminals E49 (3) and E51 (7) for remote emergency start and verify:
4.2.53.1 */*	125 vdc across terminals E4 (2) and E5 (4), starting air solenoid.
4.2.53.2 */*	Closure across terminals E19 (53) and E17 (51), field flash pressure switch.
4.2.53.3 */*	Turn on frequency generator (setting should still be at 490 Hz). Check that relays R1, R1A, and R2 are energized, if not , manually set relay.
4.2.53.4 */*	Shutdown system active light is de-energized.
4.2.53.5 */*	No voltage across terminals E4 (2) and E5 (4), starting air solenoid.
4.2.53.6 */*	Verify jumper across terminals E49 (3) and E51 (7) is removed.
4.2.53.7 */*	Contact closure across terminals E23 (57) and E18 (52), preset V.R. and gov.
4.2.54	Disconnect incoming tubing line E68, trip high pressure crankcase and verify:
4.2.54.1 */*	Trip high pressure crankcase alarm is energized.
4.2.54.2 */*	The engine shutdown cylinder is not extended.

4.2.54.3	*/*	Contact closure across terminals A5 (435) and A6 (436), high pressure crankcase remote annunciator.
4.2.54.4	*/*	Contact closure across terminals 6 and 7 at annunciator pos 8-1, high pressure crankcase spare contact.
4.2.55	*/*	Reconnect incoming tubing line E-68, trip high pressure crankcase shutdown and verify:
4.2.55.1	*/*	Trip high pressure crankcase alarm is de-energized.
4.2.55.2	*/*	Open contact across terminals A5 (435) and A6 (436) high pressure crankcase remove annunciator.
4.2.55.3	*/*	Open contact across terminals 6 and 7 at annunciator pos 8-1, high pressure crankcase spare contact.
4.2.55.4	*/*	Engine shutdown cylinder is not extended.
4.2.56		Push reset from loca pushbutton and disconnect incoming tubing line E-23H, high engine vibration shutdown. Turn off frequency generator and verify:
4.2.56.1	*/*	No voltage across terminals E4 (2) and E5 (4), starting air solenoid.
4.2.56.2	*/*	Closure across terminals E21 (55) and E19 (53, exciter reg. enable, after approximately 2 minutes.
4.2.56.3	*/*	Engine shutdown cylinder is extended for approx 2 minutes.
4.2.56.4	*/*	Trip vibration alarm is energized.
4.2.56.5	*/*	Contact closure across terminals A7 (439) and A8 (440), trip vibration remote annunciator.
4.2.56.6	*/*	Contact closure across terminals 6 and 7 and annunciator pos 9-1, trip vibration spare contact.
4.2.56.7	*/*	Open contact across terminals E23 (57) and E18 (52), preset V.R. and gov.

4.2.57 */*	Reconnect incoming tubing line E-23-H, trip engine vibration and verify	
4.2.57.1 */*	Trip vibration alarm is de-energized.	
4.2.57.2 */*	Open contact across terminals A7 (439) and A8 (440), trip vibration remote annunciator.	
4.2.57 3 */*	Open contact across terminals 6 and 7 at annunciator pos 9-1, trip vibration spare contact.	
4.2.58	Release emergency start pushbutton and turn on frequency generator. After 60 seconds, depress and install glass in the emergency start pushbutton push reset from loca pushbutton and disconnect plugged tubing line E-14, low pressure jacket water shutdown, and verify:	
4.2.58.1 */*	Trip low pressure jacket water alarm is energized.	
4.2.58.2 */*	Engine shutdown cylinder is extended for approximately 2 minutes.	
4.2.58.3 */*	Contact closure across terminals A27 (494) and A28 (495), trip low pressure jacket water remote annunciator.	
4.2.58.4 */*	Contact closure across terminals 6 and 7 at annunciator pos 17-1, low pressure jacket water spare contact.	
4.2.58.5 */*	Contact closure across terminals L51 (159) and L52 (160), for approximately 2 minutes.	
4.2.58.6 */*	Contact closure across terminals L23 (153) and L20 (141), exciter reg lockout, for approximately 2 minutes.	
4.2.58.7 */*	Contact closure across terminals E19 (53) and E22 (56), exciter reg lockout, for approximately 2 minutes.	
4.2.59 */*	Reconnect plug to panel tubing line E14, trip low pressure jacket water. Turn off frequency generator and verify:	

4.2.59.1	*/*	Trip low pressure jacket water alarm is de-energized.
4.2.59.2	*/*	Open contact across terminals A27 (494) and A28 (495), trip low pressure jacket water remote annunciator.
4.2.59.3	*/*	Open contact across terminals 6 and 7 at annunciator pos 17-1, low pressure jacket water spare contact
4.2.60		Jumper contact SS3A, wires 1 and 27, ready to load, at "A" side speed transmitter, jumper wires 27 and 28 at relay UVR1A, under voltage relay and verify:
4.2.60.1	*/*	Relay R-11A is energized and remove jumper after verification of R-11A and completion of steps 60.2, 3 and 4.
4.2.60.2	*/*	Contact closure across terminals E57 (46) and E58 (47), ready to load, HVAC system.
4.2.60.3	*/*	Contact closure across terminals E59 (48) and E60 (49), ready to load-spare.
4.2.60.4	*/*	Ready to load lights energized.
4.2.60.5	*/*	Open contact across terminals E57 (46) and E58 (47) ready to load - HVAC system.
4.2.60.6	*/*	Open contact across terminal E59 (48) and E60 (49) ready to load - HVAC system.
4.2.60.7	*/*	Ready to load light is de-energized.
4.2.60.8	*/*	Remove Jumper contact SS-3A, wires 1 and 27, ready to load, at "A: side speed transmitter and jumper at wires 27 and 28 at relay UVR1A, under voltage relay.
4.2.61		Jumper across terminals E54 (1) and E52 (15), loss of Off-site power.
4.2.61.1	*/*	125 VDC Across terminals E4 (2) and E5 (4), starting air solenoid.
4.2.61.2	*/*	Contact closure across terminals E23 (57) and E18 (52), preset V.R. and gov.

4.2.61.3 */*	DG auto start signal light is energized.
4.2.62 */*	Remove jumper across terminals E54 (1) and E52 (15), loss of Off-site power and verify:
4.2.62.1 */*	No voltage across terminals E4 (2) and E5 (4), starting air solenoid.
4.2.62.2 */*	Open contact across terminals E23 (57) and E18 (52), preset V.R. and gov.
4.2.62.3 */*	DG auto start singal light is de-energized.
4.2.63	Open circuit breakers CB-1 and CB-2 and verify:
4.2.63.1 */*	Unit available emergency status light is de-energized.
4.2.63.2 */*	Disabled D.C. start power failure alarm energized, energized, pos 24-2.
4.2.63.3 */*	Contact closure across terminals K31 (578) and K32 (579), disabled D.C. start power failure-remote annunciation.
4.2.64	Close circuit breakers CB-1, 2, 3, and 4 and verify:
4.2.64.1 */*	Unit available emergency status light is energized.
4.2.64.2 */*	Disabled D.C. start power failure alarm de-energized, pos. 24-2.
4.2.64.3 */*	Open contact across terminals K31 (578) and K32(79), disabled DC start power failure-remote annunciation.
4.2.65	Release emergency start pushbutton and turn on frequency generator. After approx 60 seconds, disconnect plug at tubing line E-10A and verify:
4.2.65.1 */*	Low oil pressure sensor malfunction alarm energized.
4.2.65.2 */*	Contact closure across terminals A15 (463) and A16 (464), low oil pressure sensor malfunction, remote annunciator.

4.2.65.3 */* Disconnect plug at tubing line E-10B.

4.2.65.4 */* Trip low pressure lube oil alarm is energized.

4.2.65.5 */* Low oil pressure sensor malfunction alarm de-energized.

4.2.65.6 */* Contact closure across terminals J15 (448) and J16 (449), low pressure lube oil trip-remote annunciator.

4.2.65.7 */* Contact closure across terminals 10 and 11 at annunciator pos 2-2, pressure lube oil trip spare contact.

4.2.65.8 */* Open contact across terminals A15 (463) and A16 (464), low oil pressure sensor malfunction remote annunciator.

4.2.65.9 */* Relay R23B is energized - emergency stop.

4.2.66 Depress emergency start pushbutton and install glass, push reset from loca, turn off frequency generator and reconnect plugs to tubing line E-10A and B, trip low pressure lube oil, depress emergency stop reset and verify:

4.2.66.1 */* Emergency stop relay R-23B is de-energized.

4.2.66.2 */* Open contact across terminals J15 (448) and J16 (449), low press lube oil trip - remote annunciator.

4.2.66.3 */* Open contact across terminals 10 and 11 at annunciator pos 2-2, pressure lube oil trip - spare contact.

4.2.67 Push normal start pushbutton and turn on frequency generator. After approx 60 seconds, disconnect plug from tubing line E10-B and verify:

4.2.67.1 */* Low oil pressure sensor malfunction alarm energized.

4.2.67.2 */* Disconnect plug from tubing line E10-C and verify.

4.2.67.2.1	*/*	Low oil pressure sensor malfunction alarm de-energized.
4.2.67.2.2	*/*	Trip low pressure lube oil shutdown alarm energized.
4.2.67.2.3	*/*	Contact closure across terminals L51 (159) and L52 (160), trip 52G, for approximately 2 minutes.
4.2.68		Turn off frequency generator and reconnect plugs to tubing lines E-10B and C.
4.2.69		Push normal start pushbutton and turn on frequency generator. After approx 60 seconds, disconnect plug from tubing line E10-C and verify:
4.2.69.1	*/*	Low oil pressure sensor malfunction alarm energized.
4.2.69.2	*/*	Disconnect plug from tubing line E10-A and verify.
4.2.69.2.1	*/*	Low oil pressure lube oil shutdown alarm energized.
4.2.70	*/*	Turn off frequency generator and reconnect plugs to tubing lines E10-A and C.
4.2.71		Push normal start pushbutton and turn on frequency generator. After approx 60 seconds, disconnect tubing line E16-A and verify:
4.2.71.1	*/*	High jacket water temp sensor malfunction alarm light is energized.
4.2.71.2	*/*	Contact closure across terminals A31 (500) and A32 (501), high jacket water temp sensor malfunction remote annunciator.
4.2.71.3	*/*	Disconnect tubing line E16-B, high temp jacket water and verify:
4.2.71.3.1	*/*	High jacket water temp sensor malfunction alarm de-energized.
4.2.71.3.2	*/*	High jacket water temp shutdown alarm energized.
4.2.71.3.3	*/*	Contact closure across terminals J33 (488) and J34 (489), high temp jacket water remote annunicator.

4.2.71.3.4	*/*	Contact closure across terminals 6 and 7 at annunciator pos 15-1, high temp jacket water - spare contact.
4.2.72	*/*	Turn off frequency generator and reconnect tubing lines E16-A and B and verify:
4.2.73	*/*	Push normal start pushbutton and turn on frequency generator. After approx 60 seconds, disconnect tubing line E16-B and verify:
4.2.73.1	*/*	Trip high temp jacket water alarm is de-energized.
4.2.73.2	*/*	Open contact across terminals J33 (488) and J34 (489), trip high temp jacket water - remote annunciator.
4.2.73.3	*/*	Open contact across terminals 6 and 7 at annunciator pos 15-1, high temp jacket water - spare contact.
4.2.73.4	*/*	High jacket water temp sensor malfunction alarm.
4.2.73.5	*/*	Disconnect tubing line E16-C and verify:
4.2.73.5.1	*/*	High temp jacket water shutdown alarm energized.
4.2.74	*/*	Turn off frequency generator and reconnect tubing lines E16-B and C.
4.2.75	*/*	Push normal start pushbutton and turn on frequency generator. After approximately 60 seconds, disconnect tubing line E16-C and verify.
4.2.75.1	*/*	High jacketwater temp sensor malfunction alarm.
4.2.75.2	*/*	Disconnect tubing line E16-A and verify.
4.2.75.2.1	*/*	High jacketwater temp shutdown alarm.
4.2.76	*/*	Turn off frequency generator and reconnect tubing line E16-A and C.

4.2.77	Test bypass. Release emergency start pushbutton after 60 seconds, and then push the test bypass pushbutton to verify.
4.2.77.1 */*	Group I pressure gauge is less than 25 PSI.
4.2.77.2 */*	Bypass test failure light is de-energized.
4.2.77.3	After Group I pressure gauge pressure returns to 60 PSI, depress emergency start pushbutton and install glass, push reset from loca and then push the test bypass pushbutton and verify.
4.2.77.3.1 */*	Bypass test failure light is energized.
4.2.78	Lube oil sump tank level. Push lube oil sump tank level pushbutton and verify:
4.2.78.1 */*	Sump tank level indicator is reading correctly by comparing it with the sump tank dip stick. Acceptance criteria: Indicator reading plus or minus 1/8 of full scale.
4.2.79	Day tank level. Push day tank level pushbutton and verify:
4.2.79.1 */*	Day tank level indicator is reading correctly by comparing it with the day tank dip stick. Acceptance criteria: indicator reading plus or minus 1/8 of full scale.
4.2.80	Annunciator. Push annunciator test button and verify:
4.2.80.1 */*	All alarm indicators are energized.
4.2.80.2 */*	Disconnect horn by disconnecting wire No. 402 at relay R-15 and tape wire end.
4.2.81	Push silence, back and Reset to reset annunciator.

4.2.82 Latch R2 relay, Group II Lockout, manually. Observe the annunciator board and determine if conditions displayed are valid. If conditions, either alarmed or cleared, are in the opposite state from what they should be, advise foreman for document and disposition. Then energize each individual alarm as listed below by momentarily either jumpering the sensor, pressure switch, relay or terminal, or disconnect the wire. Remove relays R16, R17, R18 and R20, also lift wire 437 at PS 22N and tape wire end.

4.2.82.1 Lube oil filter differential high, PS-4N, pos 6-2.
/

4.2.82.1.1 Contact closure across terminals A13 (460) and A14 (461) when alarm is energized and contact open when alarm is de-energized.
/

4.2.82.1.2 Relay R38, mechanical trouble alarm is energized at the same time as alarm.
/

4.2.82.1.3 Contact closure across terminals H19 (298) and H20 (299), mechanical trouble alarm at the same time as alarm is energized.
/

4.2.82.2 Turbo oil pressure low, right, PS 43N, pos 3-2.

4.2.82.2.1 Contact closure across terminals J17 (451) and J18 (452) when alarm is energized and contact open when alarm is de-energized.
/

4.2.82.2.2 Relay R38, mechanical trouble alarm is energized at the same time as alarm.
/

4.2.82.3 Turbo oil pressure low, left, PS 20N, pos 4-2.

4.2.82.3.1 Contact closure across terminals J19 (454) and J20 (455), when alarm is energized and contact open when alarm is de-energized.
/

4.2.82.3.2 Relay R38, mechanical trouble alarm is energized at the same time as alarm.
/

4.2.82.4 Lube oil pressure low, PS-25N, pos 1-2.

4.2.82.4.1 Contact closure across terminals J13 (445) and J14 (466) when alarm is energized and contact open when alarm is de-energized.
/

4.2.82.4.2 */*	Relay R38, mechanical trouble alarm is energized at the same time as alarm.
4.2.82.5	Loss of generator DC control power, terminals F11 (79) and F10 (89).
4.2.82.5.1 */*	Contact closure across terminals A21 (472) and A22 (473) when alarm is energized and contact open when alarm is de-energized.
4.2.82.6	High F.O. leak tank alarm, terminals C29 (411) and C30 (512) pos 13-2.
4.2.82.6.1 */*	Contact closure across terminals K5 (513) and K6 (514) when alarm is energized and contact open when alarm is de-energized.
4.2.82.7	Lube oil tank level low, terminal C25 (411) and C26 (428) pos 6-1.
4.2.82.7.1 */*	Contact closure across terminals A1 (429) and A2 (430) when alarm is energized and contact open when alarm is de-energized.
4.2.82.8	High level main tank, terminal C31 (411) and C32 (515) pos 14-2.
4.2.82.8.1 */*	Contact closure across terminals K7 (516) and K8 (517) when alarm is energized and contact open when alarm is de-energized.
4.2.82.9	Lube oil inlet temperature low, R16, pins 10 (411) and 9 (412) pos 1-1.
4.2.82.9.1 */*	Contact closure across terminals J1 (414) and J2 (415) when alarm is energized and contact open when alarm is de-energized.
4.2.82.9.2 */*	Relay R38, mechanical trouble alarm is energized at the same time as alarm.
4.2.82.10	Lube oil outlet temperature low, R17, pins 10 (411) and 9 (416) pos 2-1.
4.2.82.10.1 */*	Contact closure across terminals J3 (417) and J4 (418) when alarm is energized and contact open when alarm is de-energized.
4.2.82.10.2 */*	Relay R38, mechanical trouble alarm is energized at the same time as alarm.

4.2.82.11		Lube oil outlet temperature low, R16, pins 6 (419) and 7 (437) pos 3-1.
4.2.82.11.1	*/*	Contact closure across terminals J5 (420) and J6 (421) when alarm is energized and contact open when alarm is de-energized.
4.2.82.11.2	*/*	Relay R38, mechanical trouble alarm is energized at the same time as alarm.
4.2.82.12		Lube oil outlet temperature high, R17, pins 6 (422) and 7 (437) pos 4-1.
4.2.82.12.1	*/*	Contact closure across terminals J7 (423) and J8 (424) when alarm is energized and contact open when alarm is de-energized.
4.2.82.12.2	*/*	Relay R38, mechanical trouble alarm is energized at the same time as alarm.
4.2.82.13		Low level main tank, terminals D13 (411) and D14 (518) pos 15-2.
4.2.82.13.1	*/*	Contact closure across terminals K9 (519) and K10 (520) when alarm is energized and contact open when alarm is de-energized.
4.2.82.14		Generator under frequency, terminals F7 (79) and F9 (81) pos 16-2.
4.2.82.14.1	*/*	Contact closure across terminals B1 (522) and B2 (523) when alarm is energized and contact open when alarm is de-energized.
4.2.82.15		Spare alarm, terminals D19 (411) and D20 (527) pos 18-2.
4.2.82.15.1	*/*	Contact closure across terminals B5 (528) and B6 (529) when alarm is energized and contact open when alarm is de-energized.
4.2.82.16		Spare alarm, terminals D21 (411) and D22 (530) pos 19-2.
4.2.82.16.1	*/*	Contact closure across terminals B7 (531) and B8 (532) when alarm is energized and contact open when alarm is de-energized.
4.2.82.17		Disabled D.G. circuit breaker inoperable, terminals F7 (79) and F8 (80) pos 20-2.

4.2.82.17.1	*/*	Contact closure across terminals B9 (534) and B10 (535) when alarm is energized and contact open when alarm is de-energized.
4.2.82.17.2	*/*	Relay R35, locked out alarm is energized at the same time as alarm is energized.
4.2.82.18		Fuel oil day tank level high/low, terminals D17 (411) and D18 (524) pos 17-2.
4.2.82.18.1	*/*	Contact closure across terminals B3 (525) and B4 (526) when alarm is energized and contact open when alarm is de-energized.
4.2.82.19		Generator trouble, terminals E28 (79) and E29 (82) pos 21-1.
4.2.82.19.1	*/*	Contact closure across terminals K13 (538) and K14 (539) when alarm is energized and contact open when alarm is de-energized.
4.2.82.20		Fuel filter differential pressure high, PS-5N, pos 12-1.
4.2.82.20.1	*/*	Contact closure across terminals K3 (510) and K4 (511) when alarm is energized and contact open when alarm is de-energized.
4.2.82.20.2	*/*	Relay R38, mechanical trouble alarm is energized at the same time as alarm.
4.2.82.21		Low voltage, terminals E28 (79) and E30 (83) pos 22-1.
4.2.82.21.1	*/*	Contact closure across terminals K15 (541) and K16 (542) when alarm is energized and contact open when alarm is de-energized.
4.2.82.22		Fuel oil pressure low, PS-28N, pos 11-2.
4.2.82.22.1	*/*	Contact closure across terminals K1 (507) and K2 (508) when alarm is energized and contact open when alarm is de-energized.
4.2.82.22.2	*/*	Relay R38, mechanical trouble alarm is energized at the same time as alarm.
4.2.82.23		Jacket water pressure low, PS-22N, pos 16-1.

4.2.82.23.1 */* Contact closure across terminals A25 (491) and A26 (492) when alarm is energized and contact open when alarm is de-energized.

4.2.82.23.2 */* Relay R38, mechanical trouble alarm is energized at the same time as alarm.

4.2.82.24 High temperature gen control panel, terminals E28 (79) and E31 (84) pos 23-1.

4.2.82.24.1 */* Contact closure across terminals K17 (544) and K18 (545) when alarm is energized and contact open when alarm is de-energized.

4.2.82.25 Jacket water level low, terminals C27 (411) and C28 (496) pos 18-1.

4.2.82.25.1 */* Contact closure across terminals A29 (497) and A30 (498) when alarm is energized and contact open when alarm is de-energized.

4.2.82.26 Jacket water in temperature low, R18, pins 10 (411) and 9 (474) pos 11-1.

4.2.82.26.1 */* Contact closure across terminals J25 (476) and J26 (477) when alarm is energized and contact open when alarm is de-energized.

4.2.82.26.2 */* Relay R38, mechanical trouble alarm is energized at the same time as alarm.

4.2.82.27 Jacket water out temperature low, R21, pins 10 (411) and 9 (478) pos 12-1.

4.2.82.27.1 */* Contact closure across terminals J27 (479) and J28 (480) when alarm is energized and contact open when alarm is de-energized.

4.2.82.27.2 */* Relay R38, mechanical trouble alarm is energized at the same time as alarm.

4.2.82.28 Jacket water in temperature high, R18, pins 6 (481) and 7 (437) pos 13-1.

4.2.82.28.1 */* Contact closure across terminals J29 (482) and J30 (483) when alarm is energized and contact open when alarm is de-energized.

4.2.82.28.2 */* Relay R38, mechanical trouble alarm is energized at the same time as alarm.

4.2.82.29	Jacket water out temperature low, R21, pins 6 (484) and 7 (437) pos 14-1.
4.2.82.29.1 */*	Contact closure across terminals J31 (485) and J32 (486) when alarm is energized and contact open when alarm is de-energized.
4.2.82.29.2 */*	Relay R38, mechanical trouble alarm is energized at the same time as alarm.
4.2.82.30	Low excitation, terminals E28 (79) and E32 (85) pos 24-1.
4.2.82.30.1 */*	Contact closure across terminals K19 (547) and K20 (548) when alarm is energized and contact open when alarm is de-energized.
4.2.82.31	Engine control in local, terminals E28 (79) and E33 (86) pos 25-1.
4.2.82.31.1 */*	Contact closure across terminals K21 (550) and K22 (551) when alarm is energized and contact open when alarm is de-energized.
4.2.82.31.2 */*	With R-20 relay energized, verify contact closure across terminals H9 (283) and H10 (284) as long as alarm is energized.
4.2.82.32	Control air pressure low, PS-39N. Pos 21-2.
4.2.82.32.1 */*	Contact closure across terminals K25 (568) and K26 (569) when alarm is energized and contact open when alarm is de-energized.
4.2.82.33	Diesel start air pressure low, PS-3N1, and PS-4N1, pos 22-2.
4.2.82.33.1 */*	Contact closure across terminals K27 (572) and K28 (573) when alarm is energized and contact open when alarm is de-energized.
4.2.82.33.2 */*	Unit available emergency status light de-energized as long as alarm is energized.
4.2.82.34	Diesel start air pressure high, PS-3N2, and PS-4N2, pos 22-2.
4.2.82.34.1 */*	Contact closure across terminals K29 (575) and K30 (576) when alarm is energized and contact open when alarm is de-energized.

4.2.82.35	Generator fault, terminals E28 (79) and E34 (87) pos 26-1.
4.2.82.35.1 */*	Contact closure across terminals B13 (553) and B14 (554) when alarm is energized and contact open when alarm is de-energized.
4.2.82.35.2 */*	Contact closure across terminals 6 and 7 at annunciator pos 26-1 as long as alarm is energized.
4.2.82.36	Trip generator diff, terminals E28 (79) and E35 (88) pos 27-1.
4.2.82.36.1 */*	Contact closure across terminals B15 (556) and B16 (557) when alarm is energized and contact open when alarm is de-energized.
4.2.82.36.2 */*	Contact closure across terminals 6 and 7 at annunciator pos 27-1 as long as alarm is energized.
4.2.82.37	High generator bearing temp, terminals D31 (411) and D32 (558) pos 28-1.
4.2.82.37.1 */*	Contact closure across terminals B17 (559) and B18 (560) when alarm is energized and contact open when alarm is de-energized.
4.2.82.38	Spare alarm, terminals D33 (411) and D34 (561) pos 29-1.
4.2.82.38.1 */*	Contact closure across terminals B19 (562) and B20 (563) when alarm is energized and contact open when alarm is de-energized.
4.2.82.39	Switch not in auto, terminals D11 (411) and D12 (586) also E55 (79) and E56 (91) pos 26-2.
4.2.82.39.1 */*	Contact closure across terminals B25 (587) and B26 (588) when alarm is energized and contact open when alarm is de-energized.
4.2.82.40	Panel intrusion, pos 28-2.
4.2.82.40.1 */*	Contact closure across terminals B29 (595) and B30 (596) when alarm is energized and contact open when alarm is de-energized.
4.2.82.41	High temp engine control panel, pos 29-2.

4.2.82.41.1 */*	Contact closure across terminals B31 (598) and B32 (599) when alarm is energized and contact open when alarm is de-energized.
4.2.82.42 */*	Install relays R16, R17, R18 and R20. Also reconnect lifted wire 437 to PS22N.
4.2.83 */*	Reset R2 relay, Group II lockout, manually.
4.2.84	Close shutoff valve tubing connection E31L and vent pressure, starting air pressure L.B. and verify: Trip low pressure lube oil -
4.2.84.1 */*	No pressure at starting air pressure L.B. gauge.
4.2.84.2	Momentarily jumper terminals L37 (106) and L43 (104), remote emergency start and verify.
4.2.84.2.1 */*	120 volt D.C. across terminal L4 (102) and L5 (105), starting air solenoid.
4.2.84.3	Momentarily jumper terminals E49 (3) and E51 (7), remote emergency start and verify.
4.2.84.3.1 */*	120 volt A.C. across terminal E5 (4) and E4 (2) starting air solenoid.
4.2.85	Close shutoff valve tubing connection E31R and vent Pressure Below 150 PSIG starting air pressure R.B. and verify:
4.2.85.1 */*	Pressure Below 150 PSIG at starting air pressure R.B. gauge.
4.2.85.2 */*	No pressure at starting air pressure L.B. gauge.
4.2.85.3	Momentarily jumper terminals L37 (106) and L43 (104), remote emergency start and verify:
4.2.85.3.1 */*	No voltage across terminals L4 (102) and L5 (105), starting air solenoid.
4.2.85.4	Momentarily jumper terminals E49 (3) and E51 (7) remote emergency start and verify:
4.2.85.4.1 */*	No voltage across terminals E5 (4) and E4 (2), starting air solenoid.

4.2.86	Open shutoff valve E31R and E31L and verify jumpers are removed across terminals L37 (106) and L43 (104) and L4 (102) and L5 (105).
4.2.87	Open circuit breaker CB-9 and CB-10 and verify:
4.2.87.1 */*	Contact closure across terminals H1 (275) and H2 (276).
4.2.87.2 */*	Contact closure across terminals A35 (612) and A36 (613).
4.2.88	Close circuit breaker CB-9 and CB-10 and verify:
4.2.88.1 */*	Open contact closure across terminals H1 (275) and H2 (276).
4.2.88.2 */*	Open contact closure across terminals A35 (612) and A36 (613).
4.2.89	Trip low pressure lube oil.
4.2.89.1 */*	Trip low pressure lube oil - remove plug at bulkhead fitting E-10A and connect incoming tubing line.
4.2.89.2 */*	Trip low pressure lube oil - remove plug at bulkhead fitting E-10B and connect incoming tubing line.
4.2.89.3 */*	Trip low pressure lube oil - remove plug at bulkhead fitting E-10C and connect incoming tubing line.
4.2.90 */*	Trip - low pressure turbo oil. Remove plug at bulkhead fitting E92 and connect incoming tubing line.
4.2.91 */*	Trip - low pressure jacket water. Remove plug at bulkhead fitting E-14 and connect incoming tubing line.
4.2.92	Close the following sliding link terminals:
4.2.92.1 */*	A-Bank starting air valve. Terminals E5 (4) and E4 (2).
4.2.92.2 */*	B-Bank starting air valve. Terminals L5 (105) and L4 (102).

4.2.92.3 */* Field flash, exciter reg enable. Terminals E19 (53), E22 (56), E17 (51), and E21 (55).

4.2.92.4 * Preset V.R. and Gov. Terminals E23 (57), E18 (52), and E24 (59).

4.2.92.5 */* Ready to load, DG brkr. Terminals F5 (77) and F6 (78).

4.2.92.6 */* Ready to load, HVAC sys. Terminals E57 (46) and E58 (47).

4.2.92.7 */* Ready to load, spare. Terminals E59 (48) and E60 (49).

4.2.92.8 */* Start, spare. Terminals F1 (73) and F2 (74).

4.2.92.9 Stop, spare. Terminals F3 (75) and F4 (76).

4.2.92.10 */* Pre-position Gov and V.R. Terminals L30 (172) and L32 (171).

4.2.92.11 */* 186C Trip delay. Terminals L32 (172) and L33 (173).

4.2.92.12 */* Field flash, exciter reg enable. Terminals L23 (153), L20 (141), L21 (144), and L24 (155).

4.2.92.13 */* Trip 52G. Terminals L51 (159) and L52 (160).

4.2.92.14 */* Emergency stop. Terminals L53 (164) and L54 (165).

4.2.92.15 */* Running, spare. Terminals L55 (166) and L56 (167).

4.2.92.16 */* Running, spare. Terminals L57 (168) and L58 (169).

4.2.92.17 */* Overspeed, spare. Terminals L59 (179) and L60 (180).

4.2.92.18 */* Running W/Delay. Terminals L35 (175) and L36 (176).

4.2.92.19 */* Ready to load - HVAC system. Terminals L9 (137) and L10 (138).

4.2.92.20 */* Ready to load - spares. Terminals L11 (139) and L12 (140).

4.2.92.21 */* Emergency stop Terminals L14 (336) and L15 (337).

4.2.92.22 */* ERF computer. Terminals L49 (S4B1) and L50 (S4B2).

4.2.92.23 */* Emergency stop annunciation. Terminals L25 (no wire number) and L26 (no wire number).

4.2.92.24 */* CC Fan #1. Terminals C3 (244) and C9 (245).

4.2.92.25 */* CC Fan #2. Terminals C5 (246) and C11 (242).

4.2.92.26 */* Generator space heater control. Terminals C7 (239) and C8 (240).

4.2.92.27 */* Running contacts. Terminals G3 (253), G4 (254), G5 (255), G6 (256), G7 (257), G8 (258), G9 (259), G10 (260), G11 (161), and G12 (162).

4.2.92.28 */* Running W/Delay contacts. Terminals G13 (263), G14 (264), G15 (265), G16 (266), G17 (267), G18 (268), G19 (269), G20 (270), G21 (271), G22 (272), G23 (273), and G24 (274).

4.2.92.29 */* Loss of DC annunciation. Terminals H1 (275) and H2 (276).

4.2.92.30 */* Mechanical trouble alarm. Terminals H19 (298) and H20 (299).

4.2.92.31 */* Lockout alarm. Terminals H3 (277) and H4 (278).

4.2.92.32 */* Failed to start. Terminals H7 (281) and H8 (282).

4.2.92.33 */* Unit available local control. Terminals H9 (283) and H10 (284).

4.2.92.3 */* Unit available. Terminals H11 (285), H12 (286), H13 (287), H14 (288), H15 (289), and H16 (290).

4.2.92.35 */* Alarm. Terminals H17 (296) and H18 (297).

4.2.92.36 */* Loss of DC power. Terminals A35 (612) and A36 (613).

4.2.92.37 */* DG Brkr inop. Terminals F7 (75) and F8 (80).

4.2.93 */* Open toggle switches to allow hourmeter to be energized.

4.2.94 */* A-Bank starting air valve. Reconnect engine wire number 4 at engine "EJBA" junction box.

4.2.95 */* B-Bank starting air valve. Reconnect engine wire number 105 at engine "EJBB" junction box.

4.2.96 */* Reconnect the horn by reconnecting wire No. 402 at relay R-15, connection is across from wire No. 401A.

4.2.97 */* Manual permissive start "A" side, remove jumper across terminals E49 (3) and E50 (11).

4.2.98 */* Manual permissive start "B" side, remove jumper across terminals L37 (106) and L42 (110).

4.2.99 */* Disconnect frequency generator from terminals E7 (20) and E8 (21).

4.2.100 */* Panel check. Check for disconnected/plugged tubing or fittings. Check for any jumper/disconnected wires. Check for any open terminal links. Control panel should now be operational for engine start.

4.2.101 */* Notify Shift Supervisor that required maintenance is complete.

5.0 ACCEPTANCE CRITERIA

5.1 Maintenance performed using this procedure is acceptable when:

5.1 1 The "Completion" Sheet is properly filled out.

5.1.2 Deviations from the Procedure data and recommended settings have been reviewed on a case-by-case basis with the Maintenance Foreman.

5.1.3 Divations have been identified in the "Comments" section of the "Completion" Sheet.

5.1.4 The "Completion" Sheet has been approved.

5.1.5 Maintenance Work Orders have been written and submitted for conditions evaluated as needing attention.

POWER AND SIGNAL REMOVAL/REPLACEMENT DATA SHEET

[ ] Safety Related/QC Holdpoints [ ] Non-Safety Related

NOTES

a. To install jumpers and/or lift wires, other than those directly associated with the equipment tag(s)/scheme number(s) listed on the Work Order, notify the Shift Supervisor and comply with his instructions.

b. Ensure that each lead (wire) is marked so it can be uniquely identified with its termination point.

c. Independent verification is only required on safety related equipment. Place N/A in independent verification block for non-safety related equipment.

d. If the worker leaves the immediate proximity of the work or the work is interrupted, complete and install a "Jumper and Lifted Wire" tag per 00306-C, "Temporary Jumper And Lifted Wire Control". Instead of Control Number use the Procedure number on the tag.

e. If holdpoints do not apply, NA QC Verification block.

f. If applicable, tags shall remain intact and will only be removed by the independent verifier.

EMERGENCY DIRECTOR CHECKLIST

SUBSEQUENT ACTIONS

Transfer of Responsibilities

1. Review with the ED:

   a. Summary of events

   b. Plant status

   c. Equipment status

   d. Emergency classification

   e. Status of notifications of offsite authorities

   f. Protective and corrective actions

   g. Completed checklist items

   h. Status of facilities activation

   i. Any noted deficiencies

   j. Status of assembly and accountability, if initiated

   k. Outstanding orders

   l. Recovery plan of action, if known

CAUTION

Assure that initial actions in Procedure 91001-C, "Emergency Classification And Implementing Instructions", have been completed as necessary prior to proceeding with this checklist.

2. Review facility readiness with facility managers.

3. Assure that logkeeper maintains a log of ED actions and records any transfer of responsibility.

4. Formally assume from the OSOS the position of ED, using the following message format:

AT 1822 (Central Time) ON 8/23/90 (Date) I AM ASSUMING THE EMERGENCY DIRECTOR POSITION AND HEREBY RELIEVE YOU OF ALL EMERGENCY DIRECTOR RESPONSIBILITIES.

CHECKLIST 1

EMERGENCY DIRECTOR NOTIFICATION CHECKLIST

RESPONSIBILITIES

NOTE
Ensure NOUE, Alert, or Site Area/General Emergency Classification check list in Procedure 91001-C has been initiated.

1. This checklist must be completed by the Emergency Director (1) upon the declaration of any emergency condition (NOUE., ALERT, SITE AREA EMERGENCY, or GENERAL EMERGENCY), (2) the change in the level of classification of the emergency condition declared, or (3) a change in protective action recommendations.

2. The Emergency Director will complete Checklist 2 and sign the completed form.

3. The Emergency Director will supervise completion of notification and insure completion within the time limits.

4. When the notification responsibilities have been transferred to the EOF or TSC, the EOF Support Coordinator or the TSC Support Coordinator will supervise the preparation and transmission of Notification Messages.

5. The assigned Communicator will perform the notification.

IMMEDIATE ACTIONS

1. Direct the ENN Communicator (Shift Clerk in the Control Room) to establish communications and complete roll call in accordance with Step 8 of Checklist 2.

2. Complete the Notification Form Checklist 2, for Initial Notification.

3. Direct the designated ENN Communicator to make the notification in accordance with Checklist 2 within 15 minutes of the declaration.

CHECKLIST 1

EMERGENCY DIRECTOR NOTIFICATION CHECKLIST

✓ 5. Supervise completion of the notifications to state and local agencies insuring that notification is made within 15 minutes of the emergency declaration.

✓ 6. Complete the Event Notification Worksheet, Checklist 3, and direct a plant knowledgeable individual to notify the NRC.

✓ 7. Direct a Communicator to perform the Georgia Power Company Notification per Checklist 4.

✓ 8. Direct VEGP Security to notify the Visitor Center, Training Center, Recreation Park, GPC Vogtle Co .rol Warehouse, Corporate Garage, Administrat've Support Building, and Projects and Facility Services.

✓ 9. After normal working hours, for an ALERT or higher classification, direct Security to recall Emergency Response Personnel per EPIP 91704-C, "Actions For Security During A Radiological Emergency". On Shift Supervisory personnel in the maintenance, operations and security departments shall recall additional personnel as needed since these departments are not included in the plant recall system.

FOLLOW-UP ACTIONS

✓ 1. For Alert and higher classifications maintain communications with offsite agencies (Georgia, South Carolina, Savannah River Site, Burke County, Allendale County, Barnwell County, and Aiken County). Shift to alternate state and county notification locations, as requested.

✓ 2. Provide emergency follow-up status messages every 30-minutes incorporating new information as available. All follow-up messages are made utilizing Checklist 2. Follow-up status is not required for a NOUE.

✓ 3. Complete and transmit an Emergency Notification Message whenever the emergency classification or the protective action recommendation is changed utilizing Checklist 2.

✓ 4. Keep the NRC updated with all changes. Inform the NRC immediately of any further degradation in the plant conditions, any change from one emergency class to another, or of the termination of an emergency utilizing the Event Notification Worksheet (Checklist 3). Upon activation of the TSC, the TSC Manager assumes the responsibility of communicating with the NRC.

CHECKLIST 1

EMERGENCY DIRECTOR NOTIFICATION CHECKLIST

TERMINATION ACTIONS

1. At Alert or higher classification, reduce a classification or terminate an emergency after coordination with offsite authorities followed by a written summary within 8 hours of termination or class reduction.

2. For a NOUE close out with verbal summary to offsite authorities; followed by written summary within 24 hours.

3. Complete and transmit termination messages in accordance with Checklist 2 for Georgia and South Carolina, and Checklist 3 of this procedure for the NRC.

Sheet 1 of 1

NOTIFICATION OF UNUSUAL EVENT CHECKLIST

1. Maintain a log of the incident (this may be delegated to other personnel, as available).

2. Make an announcement over the public address system for all areas as follows:

NOTE
Wording in [ ] may not be applicable in all situations.

"ATTENTION ALL PERSONNEL - THIS IS NOT A DRILL - A NOTIFICATION OF UNUSUAL EVENT HAS BEEN DECLARED [FOR UNIT 1]."

(Include brief description of the event)

~~Shutdown required by Tech Spec due to 3 of 3 entry on Lock Loop 4 reactor trip~~ JW 4/22/16

(Repeat Announcement)

3. Implement notifications in accordance with Checklist 1, Emergency Director Notification Checklist, in Procedure 91002-C, Emergency Notifications".

4. If a radiological release is involved, request offsite dose projections be performed (see Procedure 91304-C, "Computerized And Manual Back-Up Methods For Release Rate And Dose Calculations").

5. As necessary, make protective action recommendations per Procedure 91305-C, "Protective Action Guidelines".

6. Continue with subsequent actions per the Emergency Director Checklist in Procedure 91102-C, "Duties Of The Emergency Director".

Signature _____
Emergency Director

Date/Central Time 4/22/16 1655

Sheet 1 of 1

DATA SHEET 1

CLASSIFICATION DETERMINATION

1. Evaluate status of fission product barriers:

		Breached/Challenged	
a.	Fuel Cladding Integrity (See Figure 1)	YES ____	NO ✓
b.	Reactor Coolant System Integrity (See Figure 2)	YES ____	NO ✓
c.	Containment Integrity (See Figure 3)	YES ____	NO ✓

2. Determine the highest emergency classification level for present plant conditions (See Figure 4).

Check One:

✓ Notification of Unusual Event

____ Alert

____ Site Area Emergency

____ General Emergency

Comments: Shift town required by Tech Spec + Extend 30's time to both trains if 18 outstanding

3. Assume the position of Emergency Director.

Signature _____
Emergency Director

Date 2/23/90

Central Time 1455

4. Proceed to Notification of Unusual Event, Alert, Site Area Emergency/General Emergency Checklist of this procedure.

CHECKLIST 2

EMERGENCY NOTIFICATION MESSAGE FOR STATE AND LOCAL RESPONSE AGENCIES

A. INSTRUCTIONS:

1. Complete as much of the information on this form as possible.
2. Have the Emergency Director sign the form to authorize release.
3. These notifications MUST be made within 15 minutes of event classification.
4. Use communication circuits in the following order of priority:
   a. ENN (broadcast to all stations simultaneously)
   b. SC Backup ENN (Two digit phone numbers found in VEGP Emergency Response Telephone Directory)
   c. Commercial telephones (Phone numbers in VEGP Emergency Response Telephone Directory)
   d. Radios:
      1. Use SRS radio in TSC (Freq. 1, ask SRS to notify other South Carolina agencies).
      2. Use Burke County radio in TSC (ask Burke County to notify the Georgia Emergency Management Agency).

B. INITIAL ROLL CALL: State the following:

THIS ~~IS~~/IS NOT A DRILL! (Cross out one)
HELLO, THIS IS (Name) Teresa Jones AT THE VOGTLE ELECTRIC GENERATING PLANT. PLEASE OBTAIN A COPY OF THE EMERGENCY NOTIFICATION FORM. STANDBY TO RECEIVE A MESSAGE. (Proceed with roll call in the following order, check box for responding agencies)

- ☑ Savannah River Site
- ☑ State of South Carolina
- ☑ Georgia Emergency Management Agency
- ☑ Burke County
- ☑ Aiken County
- ☑ Allendale County Notified by Commercial Phone
- ☑ Barnwell County

C. NOTIFICATION MESSAGE TRANSMISSION: Transmit complete notification form, obtain roll call and record acknowledgements.

NOTE
The Emergency Notification Message for State and Local Response Agencies (Sheet 2 and 3 of 3) Checklist 2, of this procedure is a reproduction of the actual form. The actual form should be used, although reproduction of the form in this procedure is authorized.

NRC FORM 361 (6-89)

CHECKLIST 4

GEORGIA POWER COMPANY NOTIFICATION CHECKLIST

NOTE

This checklist to be completed by a Control Room Communicator following completion of initial notifications to State and Local authorities.

IMMEDIATE ACTION

1. Obtain the latest approved version of Checklist 2.

2. If any individual cannot be reached, proceed to the next person and repeat notification steps later.

3. Make the notifications below and inform the Emergency Director of any problems encountered.

   (1) Notify each individual below when any emergency class is declared or changed. Inform each of the:

   (a) time of classification
   (b) the emergency classification
   (c) the description of the event

   Utilize the information in the latest version of Checklist 2.

	Primary Number	Alternate Number	Beeper	Central Time/Initials
Security (PESB)	3737	4111	312	1706
VEGP General Manager	3118	3119	001	1705
Plant Wilson Manager	8-526-3140	8-526-3129		/

NOTE

Request Vogtle Duty Manager to notify the On Call Project Manager

Vogtle Duty Manager	[see PLAN OF THE DAY]	1708

CHECKLIST 4

GEORGIA POWER COMPANY NOTIFICATION CHECKLIST

	Primary Number	Alternate Number	Beeper	Central Time/Initials
NRC Resident Inspector(s) VEGP	4116	4249	293 009 303	1201 [illegible]

CHECKLIST 2

EMERGENCY NOTIFICATION MESSAGE FOR STATE AND LOCAL RESPONSE AGENCIES

A. INSTRUCTIONS:

1. Complete as much of the information on this form as possible.
2. Have the Emergency Director sign the form to authorize release.
3. These notifications MUST be made within 15 minutes of event classification.
4. Use communication circuits in the following order of priority:
   a. ENN (broadcast to all stations simultaneously)
   b. SC Backup ENN (Two digit phone numbers found in VEGP Emergency Response Telephone Directory)
   c. Commercial telephones (Phone numbers in VEGP Emergency Response Telephone Directory)
   d. Radios:
      1. Use SRS radio in TSC (Freq. 1, ask SRS to notify other South Carolina agencies).
      2. Use Burke County radio in TSC (ask Burke County to notify the Georgia Emergency Management Agency).

B. INITIAL ROLL CALL: State the following:

THIS ~~IS~~/IS NOT A DRILL! (Cross out one)
HELLO, THIS IS (Name) _____ AT THE VOGTLE ELECTRIC GENERATING PLANT. PLEASE OBTAIN A COPY OF THE EMERGENCY NOTIFICATION FORM. STANDBY TO RECEIVE A MESSAGE. (Proceed with roll call in the following order, check box for responding agencies)

- [x] Savannah River Site
- [x] State of South Carolina
- [x] Georgia Emergency Management Agency
- [x] Burke County
- [x] Aiken County
- [x] Allendale County 304 306
- [x] Barnwell County

C. NOTIFICATION MESSAGE TRANSMISSION: Transmit complete notification form, obtain roll call and record acknowledgements.

NOTE
The Emergency Notification Message for State and Local Response Agencies (Sheet 2 and 3 of 3) Checklist 2, of this procedure is a reproduction of the actual form. The actual form should be used, although reproduction of the form in this procedure is authorized.

2354, 2304

EMERGENCY NOTIFICATION

Number CC2

1. [A] THIS IS A DRILL [X] THIS IS AN ACTUAL EMERGENCY

2. AUTHENTICATION: 92 (Number) SAILOR (Codeword)

3. TIME/DATE: 2354 (Eastern) / 2 mm / 23 dd / 90 yy REPORTED BY: Mary Morris (Name)

4. SITE: VOGTLE UNIT: 1 CONFIRMATION PHONE NUMBER: 1-404-554-6762

5. EMERGENCY CLASSIFICATION:
[X] NOTIFICATION OF UNUSUAL EVENT [B] ALERT [C] SITE AREA EMERGENCY [D] GENERAL EMERGENCY

6. [A] EMERGENCY DECLARATION AT: TIME/DATE: ____ (Eastern) / ____ mm / ____ dd / ____ yy

[X] EMERGENCY TERMINATION AT: TIME/DATE: 2353 (Eastern) / 2 mm / 23 dd / 90 yy (If B, go to item 16.)

7. EMERGENCY DESCRIPTION: _____

8. PLANT CONDITION: [A] IMPROVING [B] STABLE [C] DEGRADING [D] UNDETERMINED

9. EMERGENCY INVOLVES:

[A] NO RELEASE (If A, go to item 14.)
[B] POTENTIAL RELEASE
[C] A RELEASE IS OCCURRING: Started ____ Expected Duration ____
[D] A RELEASE HAS OCCURRED: Started ____ Stopped ____

10. TYPE OF RELEASE: [ ] ELEVATED [X] GROUND LEVEL

TABLE 1

GUIDELINES FOR RECOMMENDED PROTECTIVE ACTIONS FOR GASEOUS PLUME EXPOSURE

CONDITION	RECOMMENDED ACTION*
NON-ESSENTIAL STATION PERSONNEL AND GENERAL POPULATION	
1. A General Emergency has been declared.	Recommend a 2-mile precautionary evacuation in all sectors and out to 5 miles in potentially affected sectors. Shelter the remainder of the plume EPZ.
2. A General Emergency has been declared and large amounts of fission products are in the reactor coolant but not in containment atmosphere.	Recommend a 2-mile precautionary evacuation in all sectors and out to 5-miles in potentially affected sectors. Shelter the remainder of the plume EPZ.
3a. A General Emergency has been declared and large amounts of fission products in addition to noble gases are in the containment atmosphere.	Recommend a precautionary evacuation to 5 miles in all sectors and a downwind evacuation to 10 miles in potentially affected sectors. Shelter the remainder of the plume EPZ.
3b. A General Emergency has been declared and substantial core damage has occurred or is likely and containment failure is judged imminent or has occurred.	Recommend precautionary evacuation to 5 miles in all sectors and evacuation to 10 miles in potentially affected sectors. Shelter the remainder of the plume EPZ.

NOTE: References for this table are a combination of Table 5.1, page 5.31, Rev. 6/79 - Manual of Protective Actions for Nuclear Incidents and NUREG-0654, dated 1/80. Affected sectors include, as a minimum, the downwind sector(s) and adjacent sectors.

*Use enclosed EPZ Map (Figure 1) to identify potentially affected sectors for Georgia and zones for South Carolina.

TABLE 1 (Cont'd.)

GUIDELINES FOR RECOMMENDED PROTECTIVE ACTIONS FOR GASEOUS PLUME EXPOSURE

CONDITION		RECOMMENDED ACTION*
NON-ESSENTIAL STATION PERSONNEL AND GENERAL POPULATION		
4. An actual release has occurred or is imminent and the projected dose to individuals in the population is calculated to be:		
a. Whole Body: b. Thyroid:	0.2 rem to 1 rem 1 rem to 5 rem	No planned protective action necessary. Consider sheltering as precautionary measure for all affected sectors.
c. Whole Body: d. Thyroid:	0.005 rem to 0.2 rem 0.025 rem to 1 rem	Continue field monitoring.
e. Whole Body: f. Thyroid:	Less than 0.005 rem Less than 0.025 rem	Increase frequency of environmental monitoring.
5. An actual release has occurred or is imminent and the projected dose to individuals in the population is calculated to be:		Recommend evacuation to 5 miles in all sectors and evacuation to 10 miles in potentially affected sectors. Shelter the remainder of the plume EPZ.
a. Whole Body: b. Thyroid:	Greater than 1 rem Greater than 5 rem	

*Use enclosed EPZ (Figure 1) Map to identify potentially affected sectors for Georgia and zones for South Carolina.

TABLE 1 (Cont'd.)

GUIDELINES FOR RECOMMENDED PROTECTIVE ACTIONS FOR GASEOUS PLUME EXPOSURE

CONDITION	RECOMMENDED ACTION*
EMERGENCY TEAM PERSONNEL	
6. An actual release has occurred or is imminent and the projected dose to Emergency Team workers is calculated to be: a. Whole Body: 5 rem to 25 rem b. Thyroid: 25 rem to 125 rem	Control exposure of Emergency Team members to ensure doses will be less than 25 rem whole body and 125 rem thyroid except for lifesaving missions. (Appropriate controls for Emergency Team workers include time limitations and respiratory protection and potassium iodide.)
7. An actual release has occurred or is imminent and the projected dose to Emergency Team workers performing lifesaving missions is calculated to be: a. Whole Body: 25 rem to 75 rem b. Thyroid: greater than 125 rem	Control exposures of Emergency Emergency Team members performing lifesaving missions to ensure whole body dose is less than 75 rem. (Control of time of exposure will be most effective.) Although respiratory protection and potassium iodide should be used where effective to control dose to Emergency Team workers, thyroid dose may not be a limiting factor for lifesaving missions.

*Use enclosed EPZ (Figure 1) Map to identify potentially affected sectors for Georgia and zones for South Carolina.
