Mr. John T. Collins, Regional Administrator U. S. Nuclear Regulatory Commission Region IV, Office of Inspection and Enforcement 611 Ryan Plaza Drive, Suite 1000 Arlington, Texas 76011

Dear Mr. Collins:

River Bend Station Unit 1 Docket No. 50-458 Final Report/DR-121

Gulf States Utilities Company (GSU) has completed its evaluation of DR-121 concerning Gould, Incorporated supplied Motor Control Center (MCC) equipment wiring and intermittent 49% relay contact and has determined that the wiring differences found impact status indicating lights only and would not affect the safe operations of the MCC. The safe operation of the motor operated valve is not affected by the 49% relay contacts. These problems have been corrected. GSU concludes that this condition is not reportable under 10CFR 50.55(e).

Sincerely,

J. A. Lyland m.
