June 15, 1984

Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Subject: LaSalle County Station Units 1 and 2
Updated FSAR (UFSAR) Use In 10 CFR
50.59 Reviews
NRC Docket Nos. 50-373 and 50-374

Reference (a): March 30, 1984 letter to H. R. Denton
from Cordell Reed.

Dear Mr. Denton:

In accordance with 10 CFR 50.71 (e) an updated FSAR (UFSAR) was
submitted to NRR (reference A). This document was prepared using the
original FSAR through Amendment 64 (the last amendment) as the base
document. This document was updated to include facility and license
changes made to the plant as of a maximum of six months prior to
submittal. The changes from the original FSAR as well as all facility
changes and license changes were reviewed and documented in accordance
with 10 CFR 50.59. All changes requiring NRC approval have been reviewed
by the NRC and all others have 50.59 reviews on site to document the
station's determination that prior approval was not required.

Therefore, Commonwealth Edison Company believes that the LaSalle
County Station UFSAR accurately reflects the as-built condition of Unit 1
through at least October 30, 1983 and Unit 2 through Amendment 64, and
should therefore be used to perform future 10 CFR 50.59 reviews. All
future UFSAR Annual updates will also receive the same level of review to
meet the requirements of 10 CFR 50.59.

It was LaSalle's intent to pursue this approach from the
beginning of the UFSAR project and the update was reviewed to a level to
ensure that it would be usable for 10 CFR 50.59 reviews.

This letter is submitted at the request of Dr. A. Bournia of
your staff to inform you of our intent to use the LaSalle UFSAR for that
purpose.
