Nuclear Service Cooling Water Supply and Return Piping

Attention: Mr. James P. O'Reilly

Gentlemen:

On May 3, 1984, Mr. R. E. Folker of Georgia Power Company notified Mr. John Rogge of the USNRC of a potentially reportable condition involving a suspected difference in the settlement of foundations of nuclear service cooling water tower and nearby valve houses. This suspected settlement difference may lead to an overstressed condition in the piping systems connecting the nuclear service cooling water towers.

At this time, the evaluation for the reportability of this subject is continuing. Based upon information and schedules supplied by our architect engineers, Georgia Power Company expects to submit a final report to the NRC on this subject by September 14, 1984.

This response contains no proprietary information and may be placed in the NRC Public Document Room upon receipt.

Yours truly,

D. O. Foster
