Subject: McGuire Nuclear Station
Docket Nos. 50-369 and 50-370
Supplement to Replacement SG Proposed TS Amendment

Pursuant to 10 CFR 50.90, attached are proposed revisions to Table 2.2-1, Reactor Trip System Instrumentation Trip Setpoints. These changes reflect the change in programmed T_{AVG} from 588.2 °F to 585.1 °F upon replacement of the steam generators at McGuire Units 1 and 2. These changes were inadvertently omitted from my September 30, 1994 submittal.

Duke power is requesting that the change requested for the steam line safety valve lift settings in Table 3.7-3, which was requested in my September 30, 1994 submittal, be withdrawn. It has been determined that these changes are no longer needed.

Duke Power is requesting review and approval of these changes by May 25, 1996, which reflects the beginning of the Catawba steam generator replacement outage. Duke is asking that these changes be reviewed and approved concurrently with the Catawba changes (submitted under separate cover 9/18/95), and that the McGuire and Catawba Unit 1 changes become effective upon replacement of their steam generators. This requested date reflects the current replacement outage schedule. Duke will keep the staff informed of any changes in the desired approval dates.

Also attached to this submittal is the Replacement Steam Generator Topical Report, Rev. 4. This updated report (originally submitted September 30, 1994), is included for information during the review of the steam generator replacement license amendment.

The following are attached: Attachment 1, marked up pages to the Technical Specifications, Attachment 2, Technical Justification and No Significant Hazards Analysis, and Attachment 3, Replacement Steam Generator Topical Report, Rev. 4.
