Docket No. 50-424

U. S. Nuclear Regulatory Commission
ATTN: Document Control Desk
Washington, D. C. 20555

Gentlemen:

VOGTLE ELECTRIC GENERATING PLANT
INSERVICE INSPECTION SUMMARY REPORT

Enclosed are Volumes 1 and 2 of the Vogtle Electric Generating Plant, Unit 1 (VEGP-1) Inservice Inspection (ISI) Final Report which constitute the "Owner's Report for Inservice Inspection (Form NIS-1)" required by Subsubarticle IWA-6230 of the American Society of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code, Section XI, 1983 Edition with Addenda through Summer 1983. Inservice inspection activities which were conducted at VEGP-1 during the Fall 1991 maintenance/refueling outage are discussed therein. Also included therein are "Owner's Reports for Repairs or Replacements (Form NIS-2)" for repairs and/or replacements documented at VEGP-1 from the end of the previous maintenance/refueling outage through the Fall 1991 maintenance/refueling outage. In addition, several NIS-2 reports on repairs and/or replacements which were inadvertently omitted from the previous VEGP-1 inservice inspection summary reports are specifically identified in the enclosed Volume 2. Volumes 3 through 7 of the ISI Final Report contain information not typically provided in the "Owner's Report for Inservice Inspection (Form NIS-1)"; e.g., personnel certifications, nondestructive examination procedures, etc., and are not included herein. Volumes 3 through 7, however, are available for review upon request at the plant site.

With regard to the NIS-2 reports on repairs and/or replacements, only the completed NIS-2 forms are being submitted. Any attachments, e.g., code data reports, etc., that are referenced in the completed NIS-2 forms will be made available for review upon request at the plant site.

Contained in the VEGP-1 "Owner's Report for Inservice Inspection (Form NIS-1)" is a discussion on the inspection of steam generator tubes performed during the Fall 1991 maintenance/refueling outage. That discussion constitutes the Special Report required by VEGP Technical Specification 4.4.5.5.b to be submitted to the U. S. Nuclear Regulatory Commission (USNRC) within 12 months following completion of the steam generator tube inspection. Accordingly, there will not be a separate submittal made to the USNRC on the inspection of the steam generator tubes performed during the subject outage. By copy of this letter, the appropriate USNRC Regional Administrator is being provided copies of the

U. S. Nuclear Regulatory Commission

enclosed report volumes; thus, compliance with the requirements of VEGP Technical Specification 6.8.2 for submittal of Special Reports to the appropriate Regional Administrator is met.

Five copies of Volumes 1 and 2 of the ISI Final Report for the Fall 1991 maintenance/refueling outage are provided for your review. Two copies of the subject report volumes are being provided to the Regional Administrator for USNRC Region I.

Should there be any questions in this regard, please contact this office.

Sincerely,

C. K. McCoy

CKM/JAE/gb
