General Comment

The nuclear industry is outdated, ineffective, and detrimental at every stage of the process. There is no excuse to pursue nuclear energy in the current state of our climate/planet, especially when there are literally dozens of alternative energy sources available and continuing to be developed by passionate, creative individuals around the world.

But to simply dump the toxic aftereffects of this disgusting process as though it's mere garbage?

It's irresponsible. Sneaky. And all around despicable.

Landfills already leach into and pollute our groundwater, irreparably damaging ecosystems for generations to come. They're a blight on the landscape, and a heaping, visible sign of mankind's misuse of natural resources and lack of care for the future of our planet. Adding nuclear waste to the mix is a monumental step backwards.

We're decades beyond the short-sighted, poorly-researched nuclear boom of the 50s. Let's learn from the mistakes of the past, and from the mistakes of our international counterparts.

NO NUCLEAR WASTE IN LANDFILLS.
