Gentlemen:

SUBJECT: NRC INSPECTION REPORT NO. 50-382/92-02

This refers to the inspection conducted by a team of NRC inspectors and a consultant on January 27-31, 1992. The inspection included a review of activities authorized for your Waterford Steam Electric Station, Unit 3, facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

We examined your program for implementing your commitments to Generic Letter (GL) 89-10, "Safety-Related Motor-Operated Valve Testing and Surveillance." We considered the development of your program to be a strength and generally consistent with your commitments to GL 89-10. Some weaknesses were identified and are discussed in the enclosed report which included some ambiguity within your program plan. We would continue to encourage strong management support to ensure the successful implementation of your motor-operated valve testing and surveillance programs.

We have also examined actions you have taken with regard to previously identified inspection findings. The status of these items is identified in paragraph 2 of the enclosed report.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

15/

A. Bill Beach, Director
Division of Reactor Projects
