Gentlemen:

**VOGTLE ELECTRIC GENERATING PLANT
UPDATED FINAL SAFETY ANALYSIS REPORT**

In accordance with the 10 CFR 50.4 (b) and 50.71 (e) Georgia Power Company (GPC) hereby submits one signed original and ten copies of Revision 5 to the Vogtle Electric Generating Plant Updated Final Safety Analysis Report (UFSAR). This submittal is provided on a replacement page basis and is accompanied by an effective page list that identifies the current pages of the UFSAR. This Revision 5 reflects changes through March 31, 1995.

Revision 5 reflects the removal of figures that are reproductions of controlled engineering drawings. The UFSAR text now refers to these controlled drawings by their plant identification numbers in lieu of the figure numbers that previously appeared in the text. In accordance with 10 CFR 50.59, a safety evaluation was prepared which determined that no unreviewed safety question exists regarding this change to the UFSAR.

The controlled drawings reflected in figures that were previously included in a UFSAR have quickly become outdated, in some instances prior to submittal to the NRC. This occurs because 10 CFR 50.71(e) allows the revision to reflect plant changes up to a maximum of 6 months prior to the date of submittal. Also, considering 18-month UFSAR revision schedule, the figures in the UFSAR may be as much as 24 months out of date. Incorporating the controlled drawings by reference encourages the document user to obtain the current drawing revision. The level of detail contained in the UFSAR is not reduced since the same information continues to be included by reference.
