PHILADELPHIA ELECTRIC COMPANY 2301 MARKET STREET P.O. BOX 8699 PHILADELPHIA, PA. 19101 (215) 841-5001 SHIELDS L DALTROFF VICE PRESIDENT June 28, 1984 Docket No. 50-277 50-278 Mr. John F. Stolz, Chief Operating Reactors Branch #4 Division of Licensing U.S. Nuclear Regulatory Commission Washington, D.C. 20555 Inservice Inspection (ISI) Program Peach Bottom Atomic Power Station -Units 2 and 3 Dear Mr. Stolz: Enclosed for your review are six copies of the pump and valve testing portion for the next 120-month ISI interval which has been developed in accordance with ASME Section XI 1980 Edition through Winter 1981 addenda. The non-destructive examination (NDE) portion for Class 1, 2 and 3 components for the next interval was forwarded to you on May 24, 1984. However, the cover letter for that submittal apparently became separated from the six NDE program manuals in the mailing process. NRC receipt of the NDE program, in a timely manner, has been confirmed via telephone conversations between Gerald A. Gears of your staff and the Philadelphia Electric Company Licensing Section Staff. The second 120-month ISI intervals begin on July 6, 1984, and December 13, 1984, for Peach Bottom Units 2 and 3, respectively. In accordance with 10 CFR 50.55a(g), the program has been revised to reflect the requirements of the 1980 Edition of ASME Section XI with addenda through Winter 1981 and your letter dated May 2, 1983. We recognize that the first 120-month interval for Unit 2 expires during the end of cycle #6 outage for that unit. All inspections required during the first interval will be completed 8407090094 840628 PDR ADOCK 0500027

during this outage. If any second interval inspections are completed during this outage, a separate inservice inspection report will be submitted to the Commission in accordance with Technical Specifications 6.9.3.b, 4.6.G, and Table 4.6.1.

If you have any questions or require additional information, please do not hesitate to contact us.
