SUBJECT: NRC INSPECTION REPORT 50-498/95-21; 50-499/95-21

This refers to the special inspection conducted by Messrs. L. E. Ellershaw, J. M. Keeton, and Ms. K. D. Weaver of this office on August 28 through September 1, with in-office inspection through September 14, 1995. The inspection included a review of activities authorized for the South Texas Project Electric Generating Station, Units 1 and 2, facility. The purpose of the inspection was to determine whether activities authorized by the license were conducted safely and in accordance with NRC requirements. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report, and pertained to a followup assessment of your response to the Unit 2 spent fuel pool loss of water inventory on July 18, 1995. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress. The results of this inspection are documented in the enclosed report.

It is our understanding that, during the telephonic exit conducted on September 14, 1995, Mr. Scott Head committed to having an evaluation performed to determine if any change to the Updated Safety Analysis Report would be necessary regarding the stated radiation limits and the conditions under which those limits were to be achieved with respect to spent fuel pool shielding and fuel transfer shielding. If your understanding of this commitment differs from ours, please contact me immediately.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.
