Transfer of Very Low-Level Waste to Exempt Persons for Disposal

**Document:** NRC-2020-0065-DRAFT-0053

Comment on FR Doc # 2020-04506

## Submitter Information

**Name:** David Bezanson

## General Comment

Transfer of Very Low Level Waste.

5 Public Feedback Questions:

1. no
2. prohibit interstate transfer. Require owner of reactor to store in steel/concrete containers on the reactor site - and to pay the costs of this until the fissile waste has no measurable radiation.
3. no
4. Defer enacting these rules until the Linear No Threshold model has been proven fallacious.
5. Yes - the hazards of fissile refuse transport and dumping in landfill without leak-proof storage containers. Also, do not make storage/disposal rule changes until science proves an effective method for safe long-term (centuries) of geologic storage and the nuclear power industry has deposited, in the US Treasury, a sum sufficient to create the storage sites and maintain these for at least a century. Prohibit interstate transfers, thus requiring a storage site in each state that has reactors.
