Gentlemen:

**REVISED TECHNICAL SPECIFICATION PAGES FOR LCR 94-01  
FACILITY OPERATING LICENSE NPP-57  
HOPE CREEK GENERATING STATION  
DOCKET NO. 50-354**

Enclosed are revised Technical Specification pages for Public Service Electric & Gas Company's (PSE&G) License Change Request 94-01 pertaining to High and Low Pressure Emergency Core Cooling Systems. These pages have been modified to incorporate comments previously communicated to our Licensing staff. The pages differ from the original marked up pages in PSE&G's submittal of March 31, 1994, in the following manner:

Page 3/4 5-3 - The abbreviation for Core Spray System has been changed from CS to CSS for consistency.

Page B3/4 5-2 - Reference to the Bases of NUREG 1433 has been deleted and replaced with the portion of the NUREG 1433 bases applicable to the requested change.

These changes do not impact the conclusions of the significant hazards determination previously submitted.

We appreciate your support in processing this request and apologize for any delays that this may have caused.

Sincerely,

J. A. Benjamin  
Director -  
QA/Nuclear Safety Review
