Vol. 4, No. 8

OPERATING REACTORS LICENSING ACTIONS SUMMARY

Date Completed: August 1984
Date Published: October 1984

Prepared for: OFFICE OF NUCLEAR REACTOR REGULATION

Prepared by: OFFICE OF RESOURCE MANAGEMENT
U.S. NUCLEAR REGULATORY COMMISSION
WASHINGTON, D.C. 20555

FOREWORD

THE OPERATING REACTORS LICENSING ACTIONS SUMMARY IS DESIGNED TO PROVIDE THE MANAGEMENT OF THE NUCLEAR REGULATORY COMMISSION (NRC) WITH AN OVERVIEW OF LICENSING ACTIONS DEALING WITH OPERATING POWER AND NONPOWER REACTORS. THESE REPORTS UTILIZE DATA COLLECTED FROM THE DIVISION OF LICENSING IN THE OFFICE OF NUCLEAR REACTOR REGULATION AND ARE PREPARED BY THE OFFICE OF RESOURCE MANAGEMENT.

THIS SUMMARY REPORT IS PUBLISHED PRIMARILY FOR INTERNAL NRC USE IN MANAGING THE OPERATING REACTORS LICENSING ACTIONS PROGRAM. ITS CONTENT WILL CHANGE BASED ON NRC MANAGEMENT INFORMATIONAL REQUIREMENTS.

TABLE OF CONTENTS

Definitions	I-III
<u>Section 1</u> Management Overview Report	Table
A. Plot Showing Historical Summary of Active Licensing Actions	A
B. Plot Showing Licensing Actions Completed Vs. FY83 Operating Plan	B
C. Plot Showing Total Active Licensing Actions Per Month in FY83	C
D. Fiscal Year to Date Licensing Action Summary	D
E. Completed Licensing Actions by Fee Class	E
F. Manpower Summary by Facility	F
G. Operating Power Reactors Hearing Summary	G
H. Requests for NRR Assistance - Status Report	H
<u>Section 2</u> Multiplant Action Overview	
I. Plot Showing MPA Completions Vs. Operating Plan	I
J. Multiplant Issues Summary Report	J
K. Multiplant Action Completion Schedule	K
L. Multiplant Actions - Lead Assignments and Contract Information	L
M. Implementation of Resolved USIs	M
N. DOL Points of Contact for USIs	N
<u>Section 3</u> Routine (Non-NUREG-0737) Licensing Action Summary	
O. Plot of Total Active Routine Actions by Month	O
P. Plot of New Routine Licensing Actions by Month	P

Table

- | | |
|---|---|
| Q. Plot of Routine Licensing Actions Completed by Month | Q |
| R. Table of Routine Licensing Actions By Month and by Facility | R |
| S. Table of Routine Licensing Actions (Incoming and Completions) by Facility for Power Reactors | S |

Section 4 NUREG-0737 Licensing Actions

- | | |
|---|---|
| T. Plot of NUREG-0737 Active Licensing Actions by Month | T |
| U. Plot of New TAC(s) Opened for NUREG-0737 Licensing Actions by Month | U |
| V. Plot of Completed NUREG-0737 Licensing Actions by Month | V |
| W. Table of NUREG-0737 Licensing Actions by Month and Facility | W |
| X. Table of NUREG-0737 Licensing Actions (Completed and New TACS) by Facility | X |
| Y. Detail Status of NUREG-0737 Requirements Schedule | Y |
| Z. Overview of NUREG-0737 Implementation Schedule | Z |

Section 5 Condensed Management Report of Licensing Actions by Power Reactors

Section 6 Multiplant Action Descriptions for Selected Active Issues

Definitions

I. Licensing Actions

A. Active Licensing Action - an item which has been initiated but not completed.

1. Multi-Plant Licensing Action - a licensing action topic that applies to a class of reactors.
2. Plant Specific Licensing Action - a licensing action associated with a certain facility because of the uniqueness of the technical specifications or situation, e.g., reduce the number of incore detectors.

B. Types of Licensing Actions

1. Amendment - action that results in changes to facility licenses including technical specification changes.
2. Letters to Licensees - letters sent to licensee requesting information that will resolve or aid in the resolution of technical issues. Examples of letters sent to licensees are: fuel handling inside containment, assymetric loads or reactor vessel materials surveillance.
3. Orders/Exemptions - actions on operating plant that result in an Order for Modification of a License or an exemption to the regulation.

C. Categories of Multiplant Actions

1. A-Series: actions directly attributed to a specific regulation requirement, e.g., inservice inspection/testing requirements 10 CFR 50.55a(g). (Related to Regulations).
2. B-Series: action directly attributed to an occurrence of accumulative experience at licensed reactors, e.g., fire protection. (Related to Operating Experience).

3. C-Series: action resulting from NRC staff reviews of license applications, generic topics and operating reactor licensing actions, e.g., reporting requirements, fuel handling accidents, or filter tech spec requirements. (A result of internal review.)
4. D-Series: action required as a result of current data which shows that previously accepted requirements are no longer acceptable or are overly restrictive, e.g., ECCS input errors, asymmetric loads, equipment qualification. This new information may result from technological advancements, research or advanced analytical studies. (A result of new information.)
5. E-Series: action requested by the licensee that does not fit any of the other sources of licensing actions. Usually these actions are requested because of the licensee's desire to improve operational performance, e.g., core reloads, spent fuel pool modifications, or (N-1) loop operation. (A result of licensee requests.)
6. F-Series: multiplant functions which are the direct result of NUREG-0737 concerning TMI Lessons Learned.
7. G-Series: multiplant actions which are a direct result of NUREG-0660, a precursor to NUREG-0737.

II. Significant Dates

- A. Initiation - This is the date an action was actually started or implementation was begun on a plant. It is the date that a letter was issued to the licensee initiating the action, the date of an amendment request, or the date a TAC was issued for an item arising out of an operating experience or new information event.
- B. PM-Target - project manager's anticipated completion date for active items.
- C. Licensing Action Complete - date on which all work, both technical and administrative was completed and sent out of the agency.

III. Definition of Priorities (Applicable to Multi-Plants or Plant Specific Actions)

A. High (1)

1. Required by Rule, Order or NRC Letter
2. Safety-related items that use definite improvements in safety or would reduce the likelihood of transients or accidents.
3. Hearing-related matters.
4. High public interest in issue.
5. Actions which, if not completed, will affect power level or scheduled restart of a facility.
6. §2.206 petitions.

B. Medium (2)

1. Items which, if not completed could result in an otherwise unnecessary IE enforcement action.
2. Spent fuel pool expansions.
3. Task should be completed within six months.

C. Low (3)

1. Licensee requests for amendments that have low safety significance.
2. Licensee requests for amendments which may have safety significance but for which NRC action is not required during the next six months (e.g., in early submittal of a core reload).

SECTION I

OPERATING POWER REACTORS HEARING

Facility	Project Manager	Hearing Attorney	Subject	Initiation Date	Status
Big Rock Point	R. Emch	M. Karman	Mixed Oxide Fuel	8/75	In indefinite suspension as a result of GESMO decision.
Big Rock Point	R. Emch	R. Goddard R. Bachman	Spent Fuel Pool Expansion	9/25/79	Evidentiary hearings held 6/7/82-6/12/82 and 10/25/83-11/4/83 covering all contentions - emergency preparedness, criticality, pool structural integrity, crane seismic capability, cask drop, aircraft overflights, shielding, EIA, and reliability of pool make-up line. NRC's proposed findings of fact and conclusions of law filed on Feb. 3, 1984. NRC and Licensee are being deposed by Intervenors. Deposition on High Range Stack Gas Monitor on 6/4/84. Favorable Board decision issued on August 29, 1984 for most issues, a few issues remain before Board for decision.
Ginna	G. Dick	M. Young	Provisional Operating License Conversion to a Full Term Operating License	6/8/73	FTL SER issued October 1983; ACRS letter issued April 9, 1984, ASLB issued notice on 12/2/83. There were no new petitions to intervene and no new contentions filed. Prehearing conference scheduled

Facility	Project Manager	Hearing Attorney	Subject	Initiation Date	Status
Humboldt Bay	P. Erickson	M. Young	Deletion of Seismic Conditions	7/29/77	<p>for June 13, 1984. On May 29, 1984, the ASLB ordered that the prehearing conference be cancelled since there was no new or revised contentions. On July 26, 1984, the intervenor informed the ASLB that all outstanding contentions were being withdrawn. On August 30, 1984 the ASLB terminated the hearing proceeding.</p> <p>Licensee submitted decommissioning plan on July 30, 1984. ACRS Subcommittee meeting held in Eureka California on September 10, 1984 to discuss decommissioning.</p>

Facility	Project Manager	Hearing Attorney	Subject	Initiation Date	Status
Indian Point 2/3	P. Polk	J. Moore	Risk Assessment of Plant		Comments from interested parties received 2/7/84. Comments on Board findings have been received by Commission. Commission has received comments and NRR is awaiting Commission direction. Commission holding meetings to discuss Probabilistic Risk Assessment. Commission review is ongoing.
LaCrosse	R. Dudley	C. Woodhead	Full Term Operating License (with seismic considerations)	6/23/78	The FTOL proceeding is contingent upon the completion of the SEP for the facility. Seismic considerations were resolved by ASLB Decision dated 4/21/83; affirmed by Appeal Board on 7/13/83 and finalized by Commission decision on September 15, 1983.
North Anna 1/2	L. Engle	D. Swanson	Turbine Missile Risk	2/27/78	On June 2, 1982, the ASLAB issued ASAB-676 wherein the Appeal Board delineated its decision resolving the North Anna Turbine Missile issue. All issues in this proceeding are terminated other than the radon emissions in the milling & mining of uranium fuel. The radon issues will be addressed following resolution in other hearings which are contested.

Facility	Project Manager	Hearing Attorney	Subject	Initiation Date	Status
North Anna 1/2	L. Engle	D. Swanson	Spent Fuel Pool Capacity Expansion	12/8/82	A prehearing conference was held February 16, 1983 to consider VEPCO's proposed amendments to the NA 1/2 Operating License regarding the transfer and storage of Surry spent fuel at NA and the expansion of the NA spent fuel storage capacity. By Order dated June 10, 1983 the ASLB ruled that it had jurisdiction to consider the health and safety as well as environmental impact regarding the transshipment of spent fuel from Surry to North Anna. On 4/27/84, the County of Louisa filed a Notice of Withdrawal from the proceeding. The staff's SER and EIA regarding VEPCO's proposed amendments were issued on July 2, 1984. A prehearing conference was held on September 7, 1984 to address the advisability of the contentions of Concerned Citizens at Louisa County (CCLC). The Board requested additional briefs from the NRC staff, the licensee and CCLC on the legal background of Tables S4-2 within two weeks from hearing (9/7/84).

Facility	Project Manager	Hearing Attorney	Subject	Initiation Date	Status
Robinson 2	G. Requa	S. Treby	Radon	11/30/82	Partial Initial Decision issued on ASLB; affirmed by ASAB on 10/31/79 (ASAL-569). Pending before ASLAB on radon only.
Robinson 2	G. Requa	M. Karman	Steam Generator Repair	1/5/83	Hearing held 2/7/84. Hearing concluded 2/9/84. Board issued Decision 2/10/84. Hearing completed since interver.or withdrew all contentions.
Salem 1/2	D. Fischer	J. Moore	Integrated Leak Rate	10/21/83	State of Delaware filed motion to withdraw on 1/20/84. Withdrawal granted on 1/25/84.
Three Mile Island 1	J. VanVliet	R. Rawson J. Goldberg M. Wagner	TMI-1 Restart	8/79	All ASLB Partial Initial Decisions have been issued in favor of restart; ASLAB has found in favor of restart on all issues except management which is has remanded to the ASLB. The Commission has completed final agency action on emergency planning and design issues and is reviewing whether it may proceed with its immediate effectiveness decision in light of the reworded management issues.

Facility	Project Manager	Hearing Attorney	Subject	Initiation Date	Status
Three Mile Island 1	J. VanVliet	M. Wagner	TMI-1 Steam Generator Repair	8/83	Evidentiary hearing cancelled 7/18/84. Staff proposed findings are due 8/20 with a possible Board decision in the fall.
Trojan	C. Trammell	J. Goldberg	Spent Fuel Pool Expansion	1/5/84	Portland General Electric Co. requested an amendment to authorize increased storage capacity of the spent fuel pool (second rerack). The amendment request was noticed in the Federal Register on 12/5/83 as a proposed "no significant hazards consideration". Hearing requests were received from the State of Oregon and the Coalition for Safe Power. No comments were received on the staff's proposed NSHC determination. Both were admitted as parties in the Licensing Board's order of 4/23/84. On 6/8/84 the proposed NSHC determination was made final and the amendment was issued. On 6/12/84 a prehearing conference was held. The Coalition did not attend, but sent a letter to the board announcing its withdrawal from the proceeding. In an order dated 6/25/84 following the prehearing conference, two contentions of the State of Oregon were admitted and the hearing set for October 10 and 11, 1984, in Portland.

Facility	Project Manager	Hearing Attorney	Subject	Initiation Date	Status
Turkey Pt. 3/4	D. McDonald	M. Young	Reload	11/7/83	Board established. Prehearing conference held 2/28/84. Issued Prehearing Order dated 5/17/84. Hearing will be held and discovery initiated.
Turkey Pt. 3/4	D. McDonald	M. Young	Spent Fuel Pool Expansion	7/9/84	Board established.
Turkey Pt. 3/4	D. McDonald	M. Young	Fuel Enrichment	7/12/84	Board established. Amendment issued 9/5/84.
Zion 1/2	J. Norris		Containment Leakage Testing	2/13/84	Notice of Withdrawal of Application signed April 18, 1984.

IMPLEMENTATION OF RESOLVED USIs

M-1

Resolved USIs which result in changes on operating reactors become multiplant actions (MPAs). The progress can be readily tracked by referring to the appropriate MPA. Below is a correlation between USI numbers and MPA numbers.

<u>USI #</u>	<u>MPA #</u>	<u>Title</u>
A-2	D-10	Asymmetric LOCA Loads
A-7	D-01	GE Mark I Containment Evaluation - Long Term
A-10	B-25	BWR Feedwater Nozzle Cracking
A-24	B-60	Environmental Qualification
A-26	B-04	Reactor Vessel Overpressure Protection
A-36	C-10	Control of Heavy Loads Over Spent Fuel Pool
A-42	B-05	Stress Corrosion Cracking - BWR RCSPB

The following USIs have been resolved but not backfitted on operating reactors:

A-9	ATWS - Involved in rulemaking
A-31	Residual Heat Removal Requirements

DIVISION OF LICENSING POINTS OF CONTACT

SECTION VI
MULTIPLANT ACTION DESCRIPTION
FOR
SELECTED ACTIVE ISSUES

Multi-Plant Action No. A-02

Title: Appendix A - ALARA

Priority: 1

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: J. F. Stolz

Lead Project Manager: G. Gears

Lead Technical Review Branch: Effluent Treatment Systems Branch

Problem:

Implementation of Technical Specifications (TSs) called for in 50.36a and Appendix I to 10 CFR 50.

Background:

Appendix I was published in 1975 and Model TSs were sent to all licensees on 7/78, 11/78 and 7/79.

Current Status:

Action has been completed on 31 operating plants: Prairie Island (2), Cook (2), Monticello (1), Yankee Rowe (1), Beaver Valley (1), North Anna (2), Ginna (1), Brunswick (2), Fort St. Vrain (1), Oconee (3), Rancho Seco (1), St. Lucie (1), Turkey Point (2), Indian Point (2), Quad Cities (2), Surry (2), Crystal River (1), Peach Bottom (2), Farley (1), and TMI (1).

Fifty TERs and SERs have been received from FRC and EG&G to date. Forthcoming actions will primarily involve completion of TERs, updated SERs, negotiated TSs and DL issuance of license amendments. DL is proceeding to expedite issuance of 19 TS packages it has already received. The remaining sixteen licensing actions will be scheduled for completion in the early part of FY85.

Actions Remaining:

1. Licensee to submit final TS packages, ODCM and PCP.
2. Contractor provide NRR with updated SERs and negotiated TS.
3. DL issue license amendment.

Status Updated: September 14, 1984

Multi-Plant Action No. A-04

Title: Containment Leak Testing - Appendix J

Priority: 1

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: W. Paulson

Lead Project Manager: G. Dick

Lead Technical Review Branch: CSB

Problem:

Some operating plants may not be in full compliance with Appendix J to 10 CFR Part 50.

Background:

Appendix J to 10 CFR Part 50 was published after many nuclear power plants had either received their operating license or their containments had reached an advanced state of design or construction. Accordingly, some plants may not be in full compliance with Appendix J. Licensee submittals, including exemption requests and proposed Technical Specifications need to be reviewed.

Current Status:

Franklin Research Center performed the review of the 47 remaining plants in this program under contract. All 46 TERs have been received from Franklin Research Institute. No TER is expected for Dresden 1 which is on hold. All 46 SERs have been forwarded to DL by CSB. Licensing actions have been completed for all except four sites (6 plants).

CSB review may be required for revised submittal for Hatch 1.

MPA A-04 (continued)

- 2 -

Actions Remaining:

ORPMs are working on the remaining SERs in preparation for issuance.

Status Updated: September 11, 1984.

Multi-Plant Action No. A-14

Title: 10 CFR 50.55a(g) Inservice Testing

Priority: 1

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: S. Varga

Lead Project Manager: P. Tam

Lead Technical Review Branch: MEB, R-I, R-II, R-III, R-IV, R-V

Problem:

Licensees for boiling or pressurized water-cooled nuclear power facilities are required by 10 CFR 50.55a(g) to have an inservice testing program that meets the requirements of Section XI of the ASME Boiler and Pressure Vessel Code and Addenda (the Code). If the licensee determines that it is impractical to meet certain requirements of the Code, justification must be provided to the Commission, which can grant relief from specific Code requirements or impose alternate requirements. MPA A-14 is only concerned with these relief requests.

Background:

Staff review is currently several years behind originally planned schedules. The staff has previously given interim implementation guidance to the licensees by letter. In general, this guidance authorized the licensees to implement their IST plans as proposed pending completion of review by the staff. In some cases the period for which the proposed plans and interim implementation authorization would apply has expired and the licensees have made subsequent submittals before the staff completed review of the original plan.

Current Status:

The backlog of IST relief requests is being reviewed by the above named organizations. After the current backlog is cleared, reviews of requests for relief from Code requirements will be conducted on a plant-specific basis with a schedule keyed to testing program update requirements.

Actions Remaining:

SERs to be written - 6; licensing actions to be completed - 11.

Status Updated: September 12, 1984.

Multi-Plant Action No. A-17

Title: Instrumentation to Follow the Course of an Accident (R.G. 1.97)

Priority: _____

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: W. Paulson

Lead Project Manager: J. Shea

Lead Technical Review Branch: ICSB, RSB, AEB, ASB, ETSB, CPS, CSB, HFEB, RAB

Statement of Problem:

A lesson learned from the TMI-2 accident is that better information to aid the operators in preventing and mitigating the consequences of reactor accidents is needed. Regulatory Guide 1.97, Rev. 2 deals with this subject area, and its implementation is included in Supplement 1 to NUREG-0737.

Background:

Regulatory Guide 1.97 provides the minimum design criteria for permanently installed instrumentation used to provide the operator with information that may be necessary to perform his role in bringing the plant to and maintaining it in a safe condition following the accidents identified in the Design Basis. Regulatory Guide 1.97 describes methods acceptable to the staff for complying with the Commission's regulations to provide instrumentation to monitor plant variables and systems during and following an accident in a light-water cooled nuclear power plant. Involved are General Design Criteria (10 CFR 50):

- No. 13 "Instrumentation and Control"
- No. 16 "Monitoring Radioactive Releases"
- No. 19 "Control Room"

Current Status:

Operating reactor licensees, operating license applicants and holders of construction permits were requested by Generic Letter 82-33 to submit a report describing how R.G. 1.97 is met at Millstone 1 and provide schedules for implementing the basic requirements of Rev. 2 R.G. 1.97. Nearly 60% of these reports have been received by NRC. The staff has issued interim SERs for nearly 25% of the reports received.

MPA A-17 (continued)

- 2 -

Actions Required:

Confirmatory Orders have been issued for all plants except Fort St. Vrain, committing the utilities to firm implementation dates.

Status Updated: September 11, 1984.

Multi-Plant Action No. B-04

Title: Reactor Vessel Overpressure Protection

Priority: 2

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: J. F. Stolz

Lead Project Manager: A. W. DeAgazio

Lead Technical Review Branch: RSB*

Problem:

Prevent overpressurizing the reactor vessel when at low temperature. Applicable to PWRs only.

Background:

A number of events have demonstrated that administrative controls alone are not adequate to prevent low-temperature overpressure events at PWRs. All PWRs were requested to provide an overpressure protection system that is to be used when the plant is in a low-temperature shutdown condition.

Current Status:

All plants implemented their system with preliminary NRC approval followed by post implementation review of (a) electrical aspects; (b) reactor system aspects; and (c) Technical Specifications. One plant remains for which licensing action is required. Technical reviews for all plants are complete however open issues remain to be resolved for one plant.

Actions Remaining:

PM to resolve open issues on the one plant. PM to issue SER and close out remaining actions.

Status Updated: September 17, 1984.

Multi-Plant Action No. B-05 (USI A-42)

Title: Stress Corrosion Cracking - Implementation Of NUREG-0313, Rev. 1

Priority: High

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: D. Vassallo

Lead Project Manager: R. J. Clark

Lead Technical Review Branch: ORAB, MTEB

Problem:

Leaks and cracks in the heat-affected zones (HAZs) of welds in BWR austenitic stainless steel piping and components have been observed since the mid-1960's. All the cracks have been attributed to intergranular stress corrosion cracking (IGSCC). The revised purpose of this task is to ensure that all BWRs have adequate programs - as defined in NUREG-0313, Rev. 1 - to: (1) design systems constituting the reactor coolant system pressure boundary (RCSPB) to minimize the potential for IGSCC, (2) select materials for the RCSPB resistant to IGSCC, (3) control the water chemistry environment so as to reduce the potential for intergranular corrosion, (4) detect potential cracking through augmented inspections before it develops into a through-wall leak, and (5) detect possible RCSPB leakage before it becomes significant by adopting more stringent limits on allowable unidentified leakage.

Background:

In 1975, NRC (AEC) formed a Pipe Cracking Study Group (PCSG) to investigate the cause of cracking in BWR piping. In July 1977 the staff issued an implementation document, NUREG-0313, based on recommendations of the PCSG. As a result of cracking in large diameter pipes and in nozzles which had not been observed prior to 1975, a new PCSG was activated in September 1978. In October 1979 Revision 1 to NUREG-0313 was issued for comment; this contained the latest recommendations of the Study Group. Based on industry comments, the document was modified and reissued. In view of the revised staff acceptance criteria, the previous reviews were terminated (TACs 08207 through 08230 plus 11263). New TACs were issued (TACs 46651-46674) to cover the revised review effort.

Current Status:

In February 1981, NUREG-0313, Rev. 1 was issued to all holders of BWR operating licenses or construction permits and to all applicants for operating licenses. By July 1, 1981 the applicants/licensees were to provide their program for replacement of service sensitive lines and welds, their program for augmented inservice inspection, their program for improving the water chemistry environment and incorporation of adequate leak detection capability. These submittals were reviewed by EG&G Idaho under a technical assistance contract. While these reviews were underway, extensive cracks were found in the summer of 1982 in the large diameter recirculation system piping at Nine Mile Point Unit No. 1. This led to issuance of IE Bulletin 82-03 and 83 02, as well as some orders, requiring extensive inspections of service-sensitive welds in RCSPB piping. These inspection requirements were more extensive than the requirements in NUREG-0313, Rev. 1. Also, licensees of BWRs that found indications of cracks were required by amendments or orders to adopt more stringent limits on unidentified leakage. In effect, the requirements in NUREG-0313, Rev. 1 have been superseded by more recent NRC requirements. To close out this multiplant action, Safety Evaluations are scheduled to be issued in the third quarter of FY84 documenting the reviews that were performed and how the requirements of NUREG-0313, Rev. 1 have been implemented for each plant.

Actions Remaining:

MTEB provided Safety Evaluations for the 24 BWRs covered by this MPA to DL in May 1984. Letters have been or will be issued with the Safety Evaluations to utilities in June 1984 closing out action.

Status Updated: September 11, 1984

Multi-Plant Action No. B-17

Title: Tech Spec Surveillance for Hydraulic Snubbers

Priority: 1

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: J. R. Miller

Lead Project Manager: Leon B. Engle

Lead Technical Review Branch: See Current Status Below

Problem:

Operability of snubbers for LWRs is required to provide assurance that the structural integrity of the reactor coolant system and all other related systems is maintained during and following a seismic or other event initiating dynamic loads. OPERABILITY is verified by an Inservice Inspection and Testing Surveillance program specified in plant Technical Specifications (TSs). Recent operating experience has indicated the need for changes, clarifications and improvements in the Inservice Surveillance Requirements for hydraulic snubbers.

Background:

By letter dated November 20, 1981, the NRC requested that all power reactor licensee's (except SEP) incorporate the model NRC TS in plant specific Appendix A TS. A similar request was sent to SFP operating licensees on March 23, 1981. The NRC TS require that the visual inspection frequency be based upon maintaining a constant level of snubber protection to systems. In order to provide assurance of hydraulic snubber functional reliability, a representative sampling of plant installed snubbers must be functionally tested during plant shutdowns at 18 month intervals. The required sampling provides a confidence level of 95% that 90% to 100% of plant specific snubbers will be OPERABLE within acceptance limits.

Current Status:

In October 1982, management decided to transfer the remaining B-17 actions to the Regions.

The official transfer package to the Regions for B-17 was completed on March 1983. Region I and V contracted the initial review to outside consultants. Completion dates for FY83 slipped into FY84. To date Turkey Point 3&4 and Fort St. Vrain have been completed. SERs have been received for Peach Bottom 2&3 and Millstone Unit 2. Final action for Peach Bottom 2&3 has slipped but should be completed by June 30, 1984. An SER has been received for Millstone Unit 2. Amendment requests have been received for Arkansas Units 1&2 and Region IV is scheduled to produce SER no later than July 30, 1984. Twenty eight reactor units need to be completed before B-17 is complete. The Regions are being requested to expedite reviews.

Status Updated: September 11, 1984

Multi-Plant Action No. B-22

Title: Tech Spec Surveillance for Mechanical Snubbers

Priority: 1

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: J. R. Miller

Lead Project Manager: Leon B. Engle

Lead Technical Review Branch: See Current Status Below

Problem:

OPERABILITY of snubbers for LWRs is required to provide assurance that the structural integrity of the reactor coolant system and all other related systems is maintained during and following a seismic or other event initiating dynamic loads. Operability is verified by an Inservice Inspection and Testing Surveillance program specified in plant Technical Specifications (TS). Prior to initiation of MB-22, mechanical snubbers had not been included in operating plant surveillance programs. Recent operating experience has indicated that mechanical snubbers require OPERABILITY requirements similar to those required for hydraulic snubbers.

Background:

By letter dated November 20, 1981, the NRC requested that all power reactor licensee's (except SEP) incorporate the model NRC TS for mechanical snubbers in plant specific Appendix A TS. A similar request was sent to SEP operating licensees on March 23, 1981. The NRC TS require that the visual inspection frequency be based upon maintaining a constant level of snubbers protection to systems. In order to provide assurance of mechanical snubber functional reliability, a representative sampling of plant installed snubbers must be functionally tested during plant shutdowns at 18 month intervals. The required sampling provides a confidence level of 95% that 90% to 100% of plant specific snubbers will be OPERABLE within acceptance limits.

Current Status:

In October 1982, management decided to transfer the remaining B-22 actions to the Regions.

The official transfer package to the Regions for B-22 was completed in March, 1983. Region I and V contracted the initial review to an outside consultant. The additional time required for this review impacted scheduled completion dates for FY83 and FY84. To date Big Rock Point, Brunswick 1&2, Fort St. Vrain, and Turkey Point 3&4 have been completed. Final action for PeachBottom 2&3 should be completed by June 30, 1984. An SER has been received for Millstone Unit 2. Arkansas 1&2 SERs are scheduled no later than July 30, 1984. Twenty one reactor units need to be completed before B-22 is complete. The Regions are being requested to expedite reviews.

Status Updated: September 11, 1984

Multi-Plant Action No. B-23

Title: Potential Equipment Failures Associated with Degraded Grid Voltage

Priority: 1

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: W. Paulson

Lead Project Manager: R. Dudley

Lead Technical Review Branch: Power Systems Branch

Problem:

Potential exists for supplying safety and non-safety equipment with voltage outside the range for which it was designed for longer than transient periods. Such conditions could result in safety-related equipment being unavailable to mitigate the consequences of an accident.

Background:

On July 20, 1976, Northeast Nuclear Energy Company (NNECo) reported that, following a trip of Millstone Unit no. 2 on July 5, 1976, several motors powered from 480 volt (v) motor control centers failed to start as required. The failure of the 480 v motors to start was traced to blown control power fuses on the individual motor controllers. These controllers received control power through 480 v/120 v transformers within the controller.

NNECo's investigation disclosed that, as a result of the plant trip, the grid voltage dropped from 352 kv to 333 kv. This voltage drop, in conjunction with additional voltage drops associated with the transformers involved, reduced the control power and voltage within individual 480 v controllers to a voltage which was insufficient to actuate the main line controller contactors. As a result, when the motors were signalled to start, the control power fuses were blown. Subsequent testing by NNECo showed that the contactors required at least 410 v to function properly.

NNECo concluded that under similar low voltage conditions, the operability of 480 v Engineered Safety Feature equipment could not be assured.

NNECO's immediate corrective action was to raise the setpoint of the Engineered Safeguards Actuation System (ESAS) "loss of power" under-voltage relays to assure that the plant would be separated from the grid and that emergency power system (dual) operation would be initiated before the control voltage fell below that required for contactor operation. A trip of the under-voltage relays causes the emergency buses to be de-energized and a load shed signal to strip the emergency buses, the diesel generators to start and power the emergency buses, and required safety related loads to sequence start on the buses.

On July 21, 1976, NNECO reported that the earlier correction action taken was no longer considered appropriate because during starting of a circulating water pump, the voltage dropped below the new ESAS undervoltage relay setting. This de-energized the emergency buses, caused load shedding to occur, started the diesel generators and began sequencing loads on the emergency buses in accordance with the design. However, during sequencing of the loads onto the buses the voltage again dropped below the undervoltage relay setting which caused the load shed signal to strip the buses. The result was energized emergency buses with no loads supplied.

Current Status:

All utilities operating plants (BWR, PWR, HTGR) licensed prior to 1976 must provide under-voltage relays which separate the plant from the grid (in case of degraded grid voltage) and activate the plant emergency power system. Technical review is provided by the Power Systems Branch, with contractor technical support from Lawrence Livermore Lab and EG&G.

- 67 - operating plants covered by B-23
- 67 - SERs completed (2 of which have open items)
- 64 - Licensing Actions completed

Actions Remaining:

Complete the 2 remaining SERs. Complete the 3 remaining licensing actions.

Status Updated: September 13, 1984

Multi-Plant Action No. B-24*
*B-20 integrated into B-24 on 8/25/80

Title: Venting and Purging Containment While At Full Power and Effect of LOCA

Priority: High

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: Steven A. Varga

Lead Project Manager: Edward A. Reeves

Lead Technical Review Branch: CSB/DSI, M. Fields

Problem:

Purging and/or venting of reactor containment buildings with reactor coolant temperature above 200°F may result in site boundary doses exceeding 10 CFR 50 Part 100 limits if purge or vent valves fail to shut during a LOCA. The lead technical review branch is CSB, assisted by EQB/DE - R. Wright, RAB/DSI - K. Dempsey, and ORAB/DL - T. Alexion.

Background:

Events at Millstone 1 and Salem 1 (where the automatic high radiation closure of purge valves was overridden by operators) resulted in a generic letter being sent to all licensees of operating reactors in November 1978 and a report to Congress (#78-05). NRC advised licensees to take action to minimize purge and vent operations and to review and respond to SRP 6.2.4 and BTP CSB 6-4. In October 1979 a Staff Interim Position was developed. Licensees were requested to conform to it pending completion of our long-term review. In August 1980 generic item B-20 Leakage of Resilient Seals for purge and vent valves was integrated into the B-24 issue. During 1981 Technical Specifications (e.g., lock closed inoperable valves, only purge for safety related reasons, and seal leakage tests) were developed and included in guidance to the licensees.

Current Status:

1. Based on EQB/DE initial safety evaluations, requests were made for valve qualification data to thirty licensees and thirteen 50.54(f) letters. Insufficient data had been provided. Ten of the licensees closed the valves; others provided data for which EQB/DE provided nineteen additional memoranda or SEs to DL. The Quarterly Review Meeting schedules of July 1984 indicate only five EQB/DE supplementary reviews to be completed in the fourth quarter. DL action is required for seven licensees as EQB/DE supplementary SEs are received.

2. Technical reviews are completed for the electrical override concerns, for the radiological consequences concerns and for compliance with BTP CSB 6-4. Valve operability reviews are near completion as noted above. Plant specific reviews of the few remaining open issues and completion of Technical Specifications are underway. A total of 258 plant safety evaluations by four technical review branches and 25 supplementary EQB/DE evaluations have been issued for this MPA alone.
3. Most of remaining action is with DL Project Managers who should expedite closeout actions and finalize Technical Specifications per lead PM memoranda of June 19, 1981, January 4, 1984, and MPA Quarterly Review memorandum dated April 20, 1984.

Status Updated: September 12, 1984.

Multi-Plant Action No. B-41

Title: Fire Protection - Appendix R, 10 CFR 50 Compliance

Priority: High

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: W. Paulsen

Lead Project Manager: T. Wambach

Lead Technical Review Branch: CEB

Problem:

Protection of safe, shutdown capability from the adverse effects of fire in any area of the plant. During the OL review of plants licensed prior to July 1976, no in-depth review was performed in this area.

Background:

Fire at Browns Ferry Nuclear Plant in March 1975 disabled redundant safety divisions and normal safe shutdown equipment. NUREG-0050.

Current Status:

10 CFR 50.48 and Appendix R to 10 CFR 50 became effective February 17, 1981. The licensees for 69 units licensed prior to January 1, 1979 have made submittals describing (1) plans and schedules to meet Appendix R including requests for exemption from the schedules of 10 CFR 50.48, (2) design descriptions of alternative, safe shutdown modifications, where those have been proposed, and (3) exemption requests from the technical requirements of Appendix R. We have completed the review and licensing actions for the exemption requests on 59 of the units. There were no exemption requests from 5 of the units. Technical review for 7 units is ongoing for second round submittals resulting from the denial of the original exemption requests. The technical review of exemption requests for 2 units have been completed and are awaiting licensing action in DL. Design descriptions of modifications for alternative, safe shutdown were submitted for all but 5 units. The modifications for 64 units have been approved. Revised proposals have been received for 9 units. These are being reviewed as plant specific items and are not included under this MPA.

Actions Remaining:

CMEB must complete the review of exemption requests for the 7 units which are not yet completed. DL must complete the licensing act! for the 2 units for which the technical review has been completed and for the 7 units above when the technical review is completed. ASB is completed with this MPA.

Status Updated: September 11, 1984.

Multi-Plant Action No. B-48

Title: Adequacy of Station Electric Distribution Voltage

Priority: 2

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: W. Paulson

Lead Project Manager: R. Dudley

Lead Technical Review Branch: Power Systems Branch

Problem:

This review is intended to determine if the onsite distribution system in conjunction with the offsite power sources has sufficient capacity and capability to automatically start and operate all required safety loads within the equipment voltage rating.

Background:

At Arkansas Nuclear 1, loss of offsite power indicated that the electric distribution systems were inadequate for two unit operation. All utilities were asked to review their distribution systems to see if voltages were adequate.

Current Status:

69 - operating plants covered by B-48
69 - SERs completed (3 of which have open items)
61 - Licensing Actions completed

Actions Remaining:

Complete the remaining 3 SERs. Complete the remaining 5 licensing actions

Status Updated: September 13, 1984.

Multi-Plant Action No. B-57

Title: Decay Heat Removal Capability

Priority: 2

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: J. F. Stolz

Lead Project Manager: A. DeAgazio

Lead Technical Review Branch: RSB for six plants

Problem:

To assure redundancy in decay heat removal capability by incorporation of requirements into the Technical Specification.

Background:

Various events at PWRs that have occurred during shutdown conditions have indicated that administrative controls to assure decay heat removal capability have been inadequate. All PWR licensees were requested (in a letter dated June 11, 1980) to incorporate requirements for redundancy into their TSs.

Current Status:

Acceptance criteria are: (1) redundancy in decay heat removal capability must be provided for all modes or temperature ranges of operation, particularly in Modes 4, 5 and 6, and (2) adequate surveillance requirements must be provided. A total of 6 plants remain to be reviewed.

Actions Remaining:

Questions have been issued to licensees for 5 plants. Review responses and resolve outstanding issues. Issue SER for remaining plant.

Status Updated: September 17, 1984.

Multi-Plant Action No. B-59

Title: Masonry Wall Design

Priority: 2

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: J. R. Miller

Lead Project Manager: C. Trammell

Lead Technical Review Branch: SGEB

Problem:

Inadequate design criteria for masonry walls. Applies to all plants.

Background:

Problem was discovered at Trojan during reviews associated with IEB 79-02 (anchor bolts) and IEB 79-14 (as-built verification). A masonry wall was found which supported numerous safety-related pipes which was not adequate to resist seismic forces. This resulted in the issuance of IE Bulletin 80-11 on May 8, 1980. NRR (SGEB) has been assigned the responsibility to review licensee's responses to this Bulletin.

Current Status:

Franklin Research Center has been contracted to review most licensee submittals. Trojan is being reviewed by SGEB. Dresden 1 and Humboldt Bay are currently in a shutdown status, and will be reviewed by SGEB if/when needed. Review schedule and acceptance criteria for review have been established.

Actions Remaining:

42 plants remain to be completed. 28 finished to date. FRC review is active. Q-1s issued to all licensees.

Status Updated: September 11, 1984.

Multi-Plant Action No. B-60

Title: Environmental Qualification of Electric Equipment for Nuclear Power Plants

Priority: 1

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: G. Holahan

Lead Project Manager: Rudy O. Karsch

Lead Technical Review Branch: Equipment Qualification Branch

Problem:

All plants are required to meet 10 CFR 50.49 concerning 10 CFR 50, Appendix A, GDC 4.

Background:

The issue originated from a 1977 petition from the Union of Concerned Scientists on fire protection and equipment qualification. The multiplant action arose from the Commission Memorandum and Order CLI 80-21. Technical resolution of acceptance criteria were produced from Unresolved Safety Issue A-24.

Current Status:

Technical Evaluation Reports (TERs) for all of the seventy-one (71) operating plants have been issued by Franklin Research Center.

The Equipment Qualification Branch has issued all seventy-one (71) Safety Evaluation Reports. The Division of Licensing has issued all of the seventy-one (71) attached with TERs to the licensees.

The equipment qualification rule, 10 CFR 50.49, was issued on January 21, 1983, Federal Register Volume 48, No. 15, pp 2729-2734, and has been effective since February 22, 1983. The rule requires that each holder of an operating license issued prior to February 22, 1983, shall, by May 20, 1983, identify the electrical equipment important to safety within the scope of the rule already qualified and complete final equipment qualification for the remaining electrical equipment important to safety within the scope of the rule by the end of the second refueling outage after March 31, 1983, or by March 31, 1985, whichever is earlier.

The staff has completed a series of meetings with the licensee to discuss their responses to the SERs including the information for items in various categories for which justification for continued operation was not previously submitted to the NRC. SERs closing out the remaining open items are currently in preparation.

Actions Remaining:

Future actions required to complete the MPA will be predicated on the responses by the licensees to the SERs. The licensees are being requested (1) to provide, within ten (10) days of the receipt of the SER from the NRC, the resolution for the unqualified equipment if any, (2) to reaffirm the justification for continued operation, and within thirty (30) days of the receipt of the SER, submit information for equipment items neither considered qualified nor unqualified for which justification for continued operation was not previously submitted to the NRC, and (3) to provide the schedule for accomplishing proposed corrective action by May 20, 1983 as required by Paragraph (g) of 10 CFR 50.49.

An inspection module is being developed by IE and NRR. A trial inspection is tentatively scheduled for Calvert Cliffs 1 in late October 1985.

Status Updated: September 21, 1984.

Multi-Plant Action No. B-65

Title: Safety Concerns Associated With Pipe Breaks in BWR Scram System

Priority: High

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: D. Vassallo

Lead Project Manager: V. Rooney

Lead Technical Review Branch: ASB

Problem:

Assess the overall risk to long-term core cooling from postulated pipe break in Scram Discharge Volume; investigate the mitigation capability for the postulated event; establish generic recommendations for correcting any deficiencies identified.

Background:

Draft NUREG-0785 issued April 3, 1981 by AEOD described certain safety concerns associated with postulated pipe breaks in the BWR Scram System. NRC letter dated April 10, 1981 to all BWR licensees requested a generic evaluation of the concerns within 45 days and a plant specific review within 120 days. The generic evaluation was submitted by GE on behalf of the BWR owners by letter dated April 30, 1981.

Current Status:

NUREG-0803 was issued to BWR licensees and applicants on 08/31/81. Plant specific licensee responses to concerns identified in this NUREG were evaluated together with a BWROG submittal. In response to a July 25, 1983 letter, the BWROG provided additional information by letter dated November 18, 1983. On February 23, 1984 the staff met with the BWROG and identified information needed to close out this issue generically.

Actions Remaining:

Review BWROG report dated May 10, 1984 and take appropriate closeout action.

Status Updated: September 11, 1984.

Multi-Plant Action No. B-66

Title: Natural Circulation Cooldown

Priority: Medium

Cognizant Assistant Director: G. Lainas

Cognizant Branch Chief: J. Miller

Lead Project Manager: K. Heitner

Lead Technical Review Branch: RSB (R. Jones)

Problem:

All PWRs must review plant cooldown on natural circulation to determine if voiding will occur in the reactor vessel.

Background:

St. Lucie Unit 1, while cooling down on natural circulation due to a component cooling water malfunction, developed a steam space in the upper head of the reactor vessel. Core cooling was not lost, however, complex situation was deemed an undesirable challenge to the operator.

Current Status:

Generic Letter 81-21, issued May 5, 1981, requested:

1. demonstration that natural circulation cooldown by procedure should not result in reactor vessel voiding,
2. verification that supplies of condensate grade aux feedwater are sufficient, and
3. aspects of training and procedures dealing with this subject.

All licensees have responded.

Westinghouse Owners Group Generic Report (OG-57) dated 04-20-81.

Plant specific review for leadcase (St. Lucie) is complete.

Safety Evaluations have been completed for all Westinghouse and Combustion Engineering plants. Licensing action is completed for all but Diablo Canyon.

Actions Remaining:

Review has been completed for TMI-1. The staff must complete the review for remaining 7 B&W plants. A new round of questions was sent to the licensees, in order to resolve the question at the proper cooldown rate for the remaining B&W plants.

Status Updated: September 11, 1984.

Multi-Plant Action No. B-69

Title: PWR Main Steam Line Break with Continued Feedwater Addition

Priority: High (IE Bulletin 80-04)

Cognizant Assistant Director: G. Lainas

Cognizant Branch Chief: J. Miller

Lead Project Manager: E. Tourigny

Lead Technical Review Branch: RSB, ICSB/DSI

Problem:

A licensee submitted a report to NRC identifying a deficiency in the original main steam line break (MSLB) analysis for their plant. They determined that, if the auxiliary feedwater system continued to supply feedwater at runout conditions to the affected steam generator, containment design pressure would be exceeded in about 10 minutes. The long term effect of the water supplied by the auxiliary feedwater system also had not been considered in prior analyses.

Background:

Virginia Electric and Power Company (VEPCO) submitted a report to the Nuclear Regulatory Commission (NRC) dated September 7, 1979, identifying a deficiency in the original main steam line break (MSLB) analysis for North Anna Power Station, Units 3 and 4. Stone and Webster Engineering Corporation re-analyzed the containment pressure response following a MSLB and determined that, if the auxiliary feedwater system continued to supply feedwater at runout conditions to the affected steam generator, containment design pressure would be exceeded in about 10 minutes. The long term effect of the water supplied by the auxiliary feedwater system had not been considered in prior analyses.

On October 1, 1971, IE Information Notice No. 79-24 was sent to all holders of operating licenses and construction permits, informing them of VEPCO's finding. The Consumer Power Company of Michigan (Palisades, Unit 1 facility) conducted an accident analysis review pursuant to the Information Notice and found that with offsite power available, the condensate pumps would feed the affected steam generator at an excessive rate. This was not considered in their analysis of the MSLB accident.

Because of the deficiencies that were identified in the original MSLB analyses, IE Bulletin No. 80-04 was issued on February 8, 1980. The IE Bulletin requested licensees and certain applicants of PWR facilities to assess the effect of continued feedwater or condensate addition on the containment response and reactor core reactivity response to a MSLB accident. The IE Bulletin was sent to all licensed PWR facilities and to those PWR facilities nearing licensing (Diablo Canyon, McGuire, North Anna 2, Salem 2, and Sequoyah).

Current Status:

All reviews are complete except for Indian Point 2 and Rancho Seco. These reviews should be completed by December 31, 1984.

Status Updated: September 12, 1984.

Multi-Plant Action No. B-72

Title: NUREG-0737 Tech. Specs. (Generic Letter 82-16 and 83-02)

Priority: 2

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: G. Holahan

Lead Project Manager: C. Patel

Lead Technical Review Branch: Regions for 82-16 responses, ORAB for
most 83-02 responses

Problem:

To establish Technical Specifications for TMI (NUREG-0737) issues that were originally scheduled for completion by December 31, 1981.

Background:

Generic Letters 82-16 and 83-02 requested that each PWR and BWR licensee review their facilities Technical Specifications (TSs) with respect to the guidance provided. Licensees were requested to propose TSs for the NUREG-0737 issues identified in 82-16 and 83-02. Responses have been received from all licensees.

Current Status:

Regional review of PWR responses to 82-16 is complete except for Yankee Rowe. The regions have also completed reviews of three BWR responses to 83-02. ORAB is reviewing all but the above three BWR responses to 83-02. ORAB has completed their review of 83-02 responses for all plants.

Project Managers have closed out B-72 for 53 plants with the balance scheduled for close out by December 30, 1984 or earlier.

Status Updated: September 20, 1984

Multi-Plant Action No. B-75

Title: Cracking of Core Barrel Bolts In B&W Reactors

Priority: 1

Cognizant Assistant Director: G. Lainas

Cognizant Branch Chief: J. Stolz

Lead Project Manager: N. Prasad Kadambi

Lead Technical Review Branch: MTEB, MEB, RSB

Problem:

Ultrasonic testing and laboratory results indicate that the A-286 core barrel bolts may crack prematurely in the head-to-shank transition area. The B&W Owners Group classified this as a generic problem and have provided justifications for continued operation for reactors indicating bolt failures.

Background:

The core barrel bolts (upper and lower) support the full weight of the core in the B&W reactor design. The main problem appears to exist in the upper core barrel bolts, although a significantly smaller number of lower core barrel bolts also show indications of failure. On May 6, 1983, the B&W Owners Group reported to NRC staff on the results of their efforts to determine the nature, extent, cause and consequences of the bolt cracking problem. The objective of the presentations was to provide justification for continued operation in the cases of the units ANO-1, Oconee 1, 2 and 3, and Davis Besse 1. Also, they sought to provide assurance that a sufficient understanding has been achieved of the problem to assure public health and safety for all B&W units with the introduction of proposed new elements into their ISI and surveillance programs. The staff found the Justifications for Continued Operation to be acceptable as a result of the meeting.

Current Status:

The B&W Owners Group has submitted to NRC a report based on the May 6, 1983 meeting (BAW 1784, May 1983) to formalize the information presented at the meeting and respond to questions posed by the staff. Since then, all the operating B&W reactors have inspected the core barrel bolts. The broken bolts which have been found beyond those reported in BAW 1784 are two upper core barrel bolts in Oconee 3 reported in March 1984. The B&W Owners Group has submitted on August 17, 1984, a report evaluating the bolting concerns in the 177 fuel assembly plants. This completes the action required of the Internal Bolting Task Force set up to the Owners Group.

Actions Remaining:

The remaining action is on the part of NRC staff to review the B&W Owners Group Internal Bolting Task Force report. The report is entitled, "Evaluation of Bolting Concerns in 177 FA Plants". (Non-proprietary version, BAW-1842 and proprietary version, BAW-1843P). The report describes in detail the results of studies performed to determine the causes of bolting failures, the margins available in existing bolted joints, the consequences of major failures of bolting, replacement bolt designs, proper installation procedures, and required inspection programs. The NRC staff will determine if the information presented in the report constitutes a generic resolution of the bolting concerns.

Status Updated: September 18, 1984

Multi-Plant Action No. B-76

Title: Item 1.1 - Post-Trip Review - Program Description and Procedure

Priority: High

Cognizant Assistant Director: T. Novak

Cognizant Branch Chief: A. Schwencer

Lead Project Manager: A. Bournia

Lead Technical Review Branch: LQB

Problem:

Licensees shall describe their program for ensuring that unscheduled reactor shutdowns are analyzed and that a determination is made that the plant can be restarted safely.

Background:

Generic Letter 83-28 was issued on July 8, 1983. The letter identified staff positions stemming from the review of the Salem ATWS Events. These positions are related to reactor trip system reliability and general management capability. The letter requested licensees and applicants to furnish, no later than November 5, 1983 (120 days from July 8, 1983), the status of current conformance with the positions, and the licensees' plans and schedules for any needed improvements for conformance with the positions. Item 1.1 Generic Letter 83-28 concerns post-trip review procedures.

Current Status:

Sixty-one percent of the November 5, 1983 responses are complete and ready for technical review by the staff. The review has been contracted to SAI. TER's for all plants are scheduled to be submitted by December 12, 1984, with SER's from the review branch scheduled to be submitted on all plants by April 1, 1985, and action completed for all plants by May 1, 1985.

Status Updated: September 14, 1984.

Multi-Plant Action No. B-78

Title: Items 3.1.1 and 3.1.2 - Post Maintenance Testing Procedures and Vendor Recommendations - RTS Components

Priority: High

Cognizant Assistant Director: T. Novak

Cognizant Branch Chief: E. Adensam

Lead Project Manager: J. Hopkins

Lead Technical Review Branch: Regions

Problem:

Licensees shall submit the results of their review of test and maintenance procedures and Technical Specifications to assure that post-maintenance operability testing of safety-related components in the reactor trip system is required to be conducted and that the testing demonstrates that the equipment is capable of performing its safety functions before being returned to service. Licensees shall submit the results of their check of vendor and engineering recommendations to ensure that any appropriate test guidance is included in the test and maintenance procedures or the Technical Specifications, where required.

Background:

Generic Letter 83-28 was issued on July 8, 1983. The letter identified staff positions stemming from the review of the Salem ATWS Events. These positions are related to reactor trip system reliability and general management capability. The letter requested licensees and applicants to furnish, no later than November 5, 1983 (120 days from July 8, 1983), the status of current conformance with the positions, and the licensees' plans and schedules for any needed improvements for conformance with the positions. Items 3.1.1 and 3.1.2 of Generic Letter 83-28 concern post-maintenance testing procedures and vendor recommendations for reactor trip system components.

Current Status:

Fifty percent of the November 5, 1983 responses are complete and ready for technical review by the staff.

Status Updated: September 12, 1984

Multi-Plant Action No. B-79

Title: Item 3.1.3 - Post-Maintenance Testing - Changes to Tech Specs - RTS Components

Priority: High

Cognizant Assistant Director: T. Novak

Cognizant Branch Chief: E. Adensam

Lead Project Manager: J. Hopkins

Lead Technical Review Branch: ICSB (J. Calvo)

Problem:

Licensees shall identify, if applicable, any post-maintenance test requirements in existing Technical Specifications which can be demonstrated to degrade rather than enhance safety. Appropriate changes to these test requirements, with supporting justification, shall be submitted for staff approval.

Background:

Generic Letter 83-28 was issued on July 8, 1983. The letter identified staff positions stemming from the review of the Salem ATWS Events. These positions are related to reactor trip system reliability and general management capability. The letter requested licensees and applicants to furnish, no later than November 5, 1983 (120 days from July 8, 1983), the status of current conformance with the positions, and the licensees' plans and schedules for any needed improvements for conformance with the positions. Item 3.1.3 of Generic Letter 83-28 concerns changes to the Technical Specifications regarding post-maintenance testing for reactor trip system components.

Current Status:

Seventy percent of the November 5, 1983 responses are complete and ready for technical review by the staff.

Status Updated: September 12, 1984.

Multi-Plant Action No. B-80

Title: Item 4.1 - Reactor Trip System Reliability - Vendor Related Modifications

Priority: High

Cognizant Assistant Director: T. Novak

Cognizant Branch Chief: E. Adensam

Lead Project Manager: J. Hopkins

Lead Technical Review Branch: Regions

Problem:

Licensees shall review all vendor-recommended reactor trip breaker modifications to verify that either: (1) each modification has, in fact, been implemented; or (2) a written evaluation of the technical reasons for not implementing a modification exists.

Background:

Generic Letter 83-28 was issued on July 8, 1983. The letter identified staff positions stemming from the review of the Salem ATWS Events. These positions are related to reactor trip system reliability and general management capability. The letter requested licensees and applicants to furnish, no later than November 5, 1983 (120 days from July 8, 1983), the status of current conformance with the positions, and the licensees' plans and schedules for any needed improvements for conformance with the positions. Item 4.1 of Generic Letter 83-28 concerns vendor related modifications for reactor trip breakers.

Current Status:

Eighty-one percent of the November 5, 1983 responses are complete and ready for technical review by the staff.

Status Updated: September 12, 1984.

Multi-Plant Action No. B-81

Title: Items 4.2.1 and 4.2.2 - Preventative Maintenance and Trending Program for Reactor Trip Breakers

Priority: High

Cognizant Assistant Director: T. Novak

Cognizant Branch Chief: A. Schwencer

Lead Project Manager: R. Perch

Lead Technical Review Branch: EQB (R. Wright)

Problem:

Licensees shall describe their preventative maintenance and surveillance program to ensure reliable reactor trip breaker operation. The program shall include a planned program of periodic maintenance, including lubrication, housekeeping, and other items recommended by the equipment supplier, and trending of parameters affecting operation and measured during testing to forecast degradation of operability.

Background:

Generic Letter 83-28 was issued on July 8, 1983. The letter identified staff positions stemming from the review of the Salem ATWS Events. These positions are related to reactor trip system reliability and general management capability. The letter requested licensees and applicants to furnish, no later than November 5, 1983 (120 days from July 8, 1983), the status of current conformance with the positions, and the licensees' plans and schedules for any needed improvements for conformance with the positions. Items 4.2.1 and 4.2.2 of Generic Letter 83-28 concern a preventative maintenance and trending program for reactor trip breakers.

Current Status:

Twenty-three percent of the November 5, 1983 responses are complete and ready for technical review by the staff.

Status Updated: September 17, 1984.

Multi-Plant Action No. B-82

Title: Item 4.3 - Automatic Actuation of Shunt Trip Attachment for W and B&W Plants

Priority: High

Cognizant Assistant Director: T. Novak

Cognizant Branch Chief: B. Youngblood

Lead Project Manager: J. Holonich

Lead Technical Review Branch: ICSB (J. Calvo)

Problem:

Licensees of Westinghouse and B&W plants shall modify their reactor trip systems to provide automatic actuation of the breaker shunt trip attachments. The shunt trip attachment shall be considered safety related.

Background:

Generic Letter 83-28 was issued on July 8, 1983. The letter identified staff positions stemming from the review of the Salem ATWS Events. These positions are related to reactor trip system reliability and general management capability. The letter requested licensees and applicants to furnish, no later than November 5, 1983 (120 days from July 8, 1983), the status of current conformance with the positions, and the licensees' plans and schedules for any needed improvements for conformance with the positions. Item 4.3 of Generic Letter 83-28 concerns automatic actuation of the shunt trip attachment for Westinghouse and B&W plants.

Current Status:

Twelve SERs have been issued closing twelve licensing actions. Eighteen other facility responses have been received and are ready for technical review by the staff. There are 42 facilities affected by this MPA.

Status Updated: September 17, 1984.

Multi-Plant Action No. B-83

Title: NUREG-0737 Tech. Specs. (Generic Letter 83-36 and 83-37)

Priority: 2

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: G. Holahan

Lead Project Manager: C. Patel

Lead Technical Review Branch: ORAB

Problem:

To establish Technical Specifications for TMI (NUREG-0737) issues that were originally scheduled for completion after December 31, 1981.

Background:

Generic Letters 83-36 and 83-37 requested that each PWR and BWR licensee review their facilities Technical Specifications (TSs) with respect to the guidance provided. Licensees were requested to propose TSs for the NUREG-0737 issues identified in 83-36 and 83-37. Responses have been received from majority of the licensees.

Current Status:

ORAB is reviewing the responses from licensees. ORAB has completed the review of most of the responses received to date. About 25 licensees have not submitted the response to these generic letters. These licensees have been informally requested to provide the responses as soon as possible.

Status Updated: September 20, 1984

Multi-Plant Action No. C-07

Title: Fuel Handling Accident Inside Containment

Priority: 2

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: W. Paulson

Lead Project Manager: J. Lombardo

Lead Technical Review Branch: _____

Problem:

By letter dated January 3, 1977 to Commissioner Gilinsky, Mr. Robert Pollard recommended that NRR review the potential consequences of a postulated fuel handling accident at each operating plant because this accident had not been considered during licensing of the plants.

Background:

Letters were sent to licensees of 39 operating plants in January 1977 requesting that they provide a detailed evaluation of the potential consequences of this accident. Letters were not sent to licensees of 24 operating plants because this accident had been evaluated in their SER.

Current Status:

There are two plants which are not complete.

Actions Remaining:

The Project Manager is pursuing resolution of the remaining issues.

Status Updated: September 11, 1984.

Multi-Plant Action No. C-10

Title: Control of Heavy Loads At Nuclear Power Plants

Priority: Phase I, High

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: S. Varga

Lead Project Manager: D. Neighbors

Lead Technical Review Branch: ASB

Problem:

Dropped Heavy Loads may impact spent fuel, fuel in the core, or equipment that may be required to achieve safe shutdown and continued decay heat removal for PWRs and BWRs. If sufficient spent fuel or fuel in the core were damaged and if the fuel is highly radioactive, the potential releases of material could result in off-site doses that exceed 10 CFR Part 100 limits.

Background:

USI - Task A-36 was established to examine staff licensing criteria, the adequacy of measures in effect at operating plants, and to recommend necessary changes to assure the safe handling of Heavy Loads. NUREG-0612 provides the results of the review and includes the task groups recommendation.

Current Status:

1. NUREG-0612 was issued to all licensees by letter dated December 22, 1980. The letter requested: interim actions to be completed in 90 days, a Phase I Action (report, confirmation and justification) in six months and Phase II (specific requirements) in nine months.
2. The criteria contained in NUREG-0612 is used for the acceptance criteria. The contractor is Franklin Research Center (FRC). FRC provides the TER's to the lead technical group ASB.
3. Fifty six actions have been closed out at this time.

Actions Remaining:

Project Managers expedite licensees' responses necessary to close out open items as discussed in draft TER issued.

Status Updated: September 11, 1984.

Multi-Plant Action No. C-11

Title: Reactor Protection System (RPS) Power Supplies

Priority: _____

Cognizant Assistant Director: G. Lainas

Cognizant Branch Chief: D. Vascallo

Lead Project Manager: M. Thudani

Lead Technical Review Branch: PSB

Problem:

Design deficiencies have been identified in the BWR RPS MG set regulators that could adversely affect the operability of the RPS if (1) a sequence of undetected single component failures were to occur, or (2) a seismic event occurred that resulted in the postulated component malfunctions.

Background:

The design deficiency was first identified during the Hatch 2 licensing process. By letter dated August 7, 1978, the other BWRs were directed to review their designs and submit a report. That letter also directed that a surveillance program be implemented. By letter dated September 24, 1980 the licensees were requested to: (1) commit to installing a Class 1E system, (2) provide a schedule for completion of the modification, and (3) provide a schedule for submitting design information and proposed Technical Specifications. All licensees responded satisfactorily.

Current Status:

The only remaining action on this MPA involves the review of modifications and Technical Specification changes for Browns Ferry 1, 2 and 3. The licensee's input for this MPA were provided in a letter dated August 9, 1984. The review branch has received the Browns Ferry 1, 2 and 3 inputs and has indicated that the Safety Evaluation will be sent to the Project Manager by October 31, 1984.

Actions Remaining:

1. Review licensee's designs (post-implementation)
2. Review licensee's proposed TS changes
3. Issue license amendment that revises TS

Status Updated: September 11, 1984.

Multi-Plant Action No. C-14

Title: Seismic Qualification of Auxiliary Feedwater Systems

Priority: 1

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: G. Holahan

Lead Project Manager: J. T. Beard

Lead Technical Review Branch: ASB

Problem:

Since TMI-2, great attention has been focused on the ability of PWRs to reliably provide for shutdown decay heat removal at normal system pressure. The steam generator is the preferred and proven choice for accomplishing a safe shutdown of the plant. Therefore, the auxiliary feedwater systems (AFW) should satisfy the seismic design criteria for the Safe Shutdown Earthquake (SSE), consistent with other safety-related systems in the plant. However, only those facilities licensed recently have been reviewed against the NRC Standard Review Plan which treats the AFW as an Engineered Safety Feature.

Background:

In August 1980, the NRC completed a preliminary study of the risk of a seismically induced loss of decay heat removal for plants without a seismically qualified AFW. One of the conclusions was that the increase in risk during the next three years is sufficiently small to allow plant operations to continued. Another conclusion was that plants should be surveyed to confirm the extent of thw BWR plants without seismically qualified AFW.

In February 1981, the NRC developed and embarked on Multi-Plant Action Plan C-14, "Seismic Qualification of Auxiliary Feedwater Systems". An objective to this plan is to increase, to the extent practicable, the capability of those plants without seismically qualified AFW to withstand earthquakes up to the SSE level. This Multi-Plant plan is described in an NRC memorandum to H. Denton dated February 20, 1981. Generic Letter 81-14 requested licensees: (1) to identify, via a walkdown of the AFW system, deficiencies ammenable to simple remedial actions, and (2) to review the plants to determine the extent and areas where significant improvements may be needed. The NRC will then take action to require licensees to make improvements such as re-analysis and/or modifications, for those plants which cannot demonstrate reasonable assurance of the functioning of the AFW system following an earthquake of SSE magnitude.

Current Status:

Under technical assistance contract FIN A-0429, Lawrence Livermore National Laboratory (LLNL) has reviewed the licensees' responses to Generic Letter 81-14 for the 47 PWRs involved. It was then necessary to generate Requests for Additional Information for almost every plant, in order to rectify deficiencies in the responses or to obtain technical clarification of the responses. LLNL documented the seismic capabilities of the AFW's in plant-specific Technical Evaluation Reports (TERs), which serve as the technical basis for NRR licensing actions.

During FY83, LLNL completed all the TERs. In some cases, additional communications with the licensees have been necessary to complete a Safety Evaluation Report (SER). In FY81, SERs for two plants were completed; in FY82, for 20 plants; in FY83 for 16 plants.

LLNL has produced a preliminary draft report for this project which provides a summary and overall evaluation of the seismic capabilities of AFW systems. The project report (NUREG/CR-3271) has been reviewed by the NRC and a final draft developed. LLNL has delivered a camera-ready copy of the overall project report. This action fulfilled the last of the contractual requirements.

Actions Remaining:

The NRC has to continue discussions with licensees for the last seven plants and complete these SERs. These actions are presently scheduled to be completed in the last quarter of FY84.

Status Updated: September 12, 1984.

Multi-Plant Action No. C-15

Title: Control of Heavy Loads At Nuclear Power Plants

Priority: Phase II, Medium

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: S. Varga

Lead Project Manager: D. Neighbors

Lead Technical Review Branch: ASB

Problem:

Dropped Heavy Loads may impact spent fuel, fuel in the core, or equipment that may be required to achieve safe shutdown and continued decay heat removal for PWRs and BWRs. If sufficient spent fuel or fuel in the core were damaged and if the fuel is highly radioactive, the potential releases of radioactive material could result in off-site doses that exceed 10 CFR Part 100 limits.

Background:

USI - Task A-36 was established to examine staff licensing criteria, the adequacy of measures in effect at operating plants, and to recommend necessary changes to assure the safe handling of Heavy Loads. NUREG-0612 provides the results of the review and includes the task groups recommendation.

Current Status:

(See C-10 also)
Twelve sites (20 plants) have been selected as a pilot program to determine if significant problems exist for Phase II. As a result of this program, a determination will be made whether or not to review the remainder.

Actions Remaining:

1. Project Managers expedite licensees' responses necessary to close out open items as discussed in draft TER for 12 sites as they are issued.
2. Two TERs are being issued at this time.

Status Updated: September 11, 1984.

Multi-Plant Action No. D-01

Title: Mark I Containment Program

Priority: 1

Cognizant Assistant Director: G. Lainas

Cognizant Branch Chief: D. Vassallo

Lead Project Manager: B. Siegel

Lead Technical Review Branch: CSB - Load Audit Review
MEB - Structural Audit Review

Problem:

Since the original design of the Mark I containment system additional loading conditions resulting from the dynamic effects of drywell air and steam being rapidly forced into the suppression pool during a postulated LOCA and from suppression pool response to SRV operation generally associated plant transient operating conditions have been identified, the objective of this program is to restore the originally intended design safety margins for each Mark I containment system.

Background:

A Mark I Owners Group (OG) with GE the lead technical organization was formed to quantify the hydrodynamic loads and assess the effects of these loads on the Mark I containment structure. The OG divided this task into a short term (STP) and long term program (LTP).

The objectives of the STP were to verify that each Mark I containment system would maintain its integrity and functional capability when subjected to the most probable loads induced by a postulated design-basis LOCA, and to verify that licensed Mark I BWR facilities would continue to operate safely, without endangering the health and safety of the public, while a methodical, comprehensive LTP was being conducted. The staff in the "Mark I Containment Short-Term Program Safety Evaluation Report", NUREG-0408 concluded that sufficient margin of safety had been demonstrated to assure the functional performance of the containment system and, therefore, any undue risk to the health and safety of the public was precluded.

The objectives of the LTP were to establish design-basis loads that are appropriate for the anticipated life of each Mark I BWR facility (40 years), and to restore the originally intended design-safety margins for each Mark I containment system. The principle thrust of this program has been the development of generic methods for the definition of

suppression pool hydrodynamic loading events and the associated structural assessment techniques for the Mark I configuration. The generic analysis techniques are intended to be used to perform a plant-unique analysis (PUA) for each Mark I facility. The staff in the "Mark I Containment Long-Term Program Safety Evaluation Report", NUREG-0661 concluded that the load definition procedures utilized by the BWR Owners Group, as modified by the staff's requirements provide conservative estimates of these loading conditions and that the structural acceptance criteria are consistent with the requirements of the applicable codes and standards.

Current Status:

The licensees have designed and are in the process of installing modifications to meet the Commission's Order date for each operating plant. More than half of the 22 plants affected have completed these modifications. The licensees have prepared and submitted plant-unique analysis reports which provide the bases for these modifications for staff review. Technical assistance contracts have been awarded to Franklin Research Center (FRC) and Brookhaven National Laboratory (BNL) to perform an audit review of the licensee's PUA. CSB has lead technical review responsibility for the BNL load audit review and MEB for the FRC structure audit review. Technical Evaluation Reports from the contractors have been received for nine of the 22 plants. Some licensees have submitted Technical Specifications which are being reviewed by the staff.

Actions Remaining:

1. Post implementation audit of PUA by Franklin Institute and BNL on Technical Assistance Contracts.
2. Issuance of SER to each licensee on acceptability of Mark I LTP modifications and analyses for their plant.
3. Technical Specification changes resulting from Mark I modifications.

Status Updated: September 17, 1984.

Multi-Plant Action No. D-05

Title: Plant UPI Model Problem

Priority: 3

Cognizant Assistant Director: G. Lainas

Cognizant Branch Chief: J. Miller

Lead Project Manager: D. DiIanni

Lead Technical Review Branch: RSB

Problem:

Only two-loop PWRs are affected. All Westinghouse (W) two-loop plants have a Low Pressure Safety Injection System (LPSI) which injects water directly into the Upper Plenum of the Reactor Vessel (UPI). This is used to counter the consequences of a single failure for two-loop units.

However, the currently approved ECCS evaluation models for two-loop plants are based on an ECCS system in which HPSI is directly to the cold leg of the Reactor Coolant System and because of this may be considered as not meeting the requirements of 10 CFR Appendix K Section II.5.

Background:

This has been an outstanding issue for two-loop plants since the implementation of Regulations for an approved ECCS system. The issue became a MPA during late 1977 and 1978 when an "interim" model was developed to review the potential effect of UPI against the conventional model.

Current Status:

Six facilities are affected. W two-loop UPI plants are presently operating on the bases of a number of approaches being taken to determine allowable peaking coefficients in an interim manner.

A meeting was held with the four utilities involved with the six facilities on July 24, 1984, the purpose of which was to define an NRC acceptable standard for an evaluation model that would satisfy the requirements described in item 5 of paragraph II of appendix K of 10 CFR Part 50. The Westinghouse Owners Group of the four utilities submitted an evaluation model that would be used to determine the margin existing on the peak clad temperature. RSB is preparing a list of comments necessary to clarify various areas of the Westinghouse model in order that the NRC may complete the review. The evaluation model may need major revisions in order to adequately address our concerns. Similar reviews will also be performed for evaluation models developed by other fuel vendors (i.e., Exxon, and Combustion Engineering) before MPA D-05 is considered completed.

Actions Remaining:

Safety evaluations will be prepared for three evaluation models submitted by each of the three fuel vendors (i.e., Westinghouse, Exxon and Combustion Engineering). MPA D-05 will be closed out after these three safety evaluations are issued and the analysis for determining the margins existing on the peak clad temperature for each two-loop units will be handled on a plant specific basis. An estimated completion date for MPA D-05 cannot be established since the magnitude of effort involved in revising the evaluation models is not known at this time.

Status Updated: September 14, 1984.

Multi-Plant Action No. D-10

Title: Asymmetric LOCA Loads On Primary Reactor Coolant System

Priority: Medium

Cognizant Assistant Director: D. Crutchfield

Cognizant Branch Chief: W. Paulson

Lead Project Manager: J. Shea

Lead Technical Review Branch: MEB, MTEB, CPB, CSB

Problem:

Asymmetric loads resulting from rupture of the primary piping could potentially damage reactor vessel support internals and other primary system components. Damage to the reactor internals could impair core coolability.

Background:

In January 1978, all pressurized water reactor (PWR) licensees were required by the NRC to provide an assessment of the adequacy of their reactor vessel supports and other affected structures to withstand combinations of responses to asymmetric loss-of-coolant accident (LOCA) loads and the Safe Shutdown Earthquake (SSE). This potential safety problem was subsequently identified as an unresolved safety issue Task Action Plan A-2.

Current Status:

All PWR plant assessments for asymmetric loads have been received and evaluated by staff and contractor EG&G. As a basis for this evaluation, staff implemented criteria developed as a part of the Task Action Plan A-2. These criteria are included in NUREG-0609. Some PWR licensees have performed a study of "leak before break". The "leak before break" concept was reviewed by CRGR on September 28, 1983 and received written CRGR approval several days later. By Generic Letter 84-04 dated 2/1/84, PWR licensees were informed of the staff evaluation of the WOG "Leak Before Break" concept. The staff concluded that an acceptable technical basis has been provided so that asymmetric blowdown loads resulting from double ended pipe breaks in main coolant loop piping need not be considered as a design basis as long as acceptable leakage detection systems were operable. It is expected that by the end of the first quarter of FY85 SERs will have been issued and the generic issue closed out. Further responses for eight plants may require TACs and assistance from MTEB to evaluate "leak detection before break" if these plants opt for this solution to the Asymmetric LOCA issue.

Actions Remaining:

Complete the 4 CE SERs (4th qtr. FY84). Await responses from 8 remaining non owner group utilities that are expected to opt for the "Leak Before Break" concept.

Status Updated: September 11, 1984.

Multi-Plant Action No. D-17

Title: Definition of Operable

Priority: Medium

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: J. F. Stolz

Lead Project Manager: Sydney Miner

Lead Technical Review Branch: None

Problem:

Clarification of the term "OPERABLE" as it applies to support system outages or multiple outages or redundant components.

Background:

In a letter dated April 10, 1980, an explanation of the problem, plus accompanying illustrate examples of recommended changes contained in the associated bases, were delineated to all licensees. The licensees were required to submit proposed changes to tech specs applicable to their plant and to implement procedures designed to assure compliance with the specifications containing new requirements.

Current Status:

1. Acceptance Criteria

The acceptance criteria that LCO should be incorporated in the Technical Specification which requires that the plants be placed in cold shutdown if redundant ECCS loops become inoperable either due to failures in the ECCS loops or the diesel generators.

2. Important Schedule Considerations

For the remaining 8 licensing actions two are scheduled to be completed this fiscal year and six the next fiscal year.

3. Review Responsibilities

This MPA is being handled completely within the Project Management Organization. Ten reviews were assigned to a contractor. All of the contractor reviews have been completed and final TERs issued.

Actions Required:

Remaining Milestones

- (a) Approval of remaining changes to the Technical Specifications of the remaining plants.
- (b) Issuance of the SER and the License Amendments.

Status Updated: September 17, 1984.

Multi-Plant Action No. E-04

Title: BWR Single Loop Operation

Priority: Low

Cognizant Assistant Director: G. Lainas

Cognizant Branch Chief: D. Vassallo

Lead Project Manager: R. Clark

Lead Technical Review Branch: RSB, CPB

Problem:

The standard BWR Technical Specifications do not permit a plant with two recirculation loops to operate either with one loop or in the natural circulation mode. Fifteen operating BWRs have requested approval to operate at reduced power levels with a single loop if problems develop with a jet pump, valve, seals, flow controller, etc., in the other loop. Most of the potential safety reviews can more appropriately be resolved on a generic basis.

Background:

Single loop operation at limited power levels had previously been authorized for 6 BWRs for short periods of time (one week to two months). During the fall of 1978 while Browns Ferry Unit 1 was operating on a single loop, an increase in instrument noise was noted above 60% power, which could be indicative of flow and flux variations. Based on this operating experience, the staff has concluded that BWRs can safely operate at at least 50% power by natural circulation (i.e., without forced flow from any recirculation loop). Accordingly, as an interim measure, six plants have been authorized to operate, if necessary, at power levels of 50% with a single recirculation loop while the generic concern of flow stability at higher power levels during single loop operation are being resolved.

Current Status:

With respect to operation at power levels above 50% power, a meeting was held October 22, 1981, with all BWR licensees and GE to discuss GE's evaluation of Browns Ferry's and other BWR operating experience with single loop operation. RSB and CPB have prepared a draft list of questions which we discussed in a meeting with GE on January 21, 1982. The issues regarding operation at power levels above 50% are not likely to be resolved in FY83. In the interim, the effort is being directed approving operation at 50% power.

Actions Remaining:

Complete SE inputs by CPB for operation at 50% power and issue revised Technical Specifications.

Status Updated: December 8, 1982

Multi-Plant Action No. E-05

Title: Westinghouse N-1 Loop Operation

Priority: Low

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: S. Varga

Lead Project Manager: D. Wigginton

Lead Technical Review Branch: RSB

Problem:

All Westinghouse plants have a provision in their license that prohibits operation with less than all loops (N) in service.

Background:

It may be desirable to operate plants with one loop out of service. Present restrictions in the license do not permit this type of operation.

Current Status:

Only three Westinghouse plants, Beaver Valley and Zion (1 and 2), have submitted proposed amendments for N-1 loop operation. Beaver Valley is lead plant and most of the review has been completed. Trojan, a plant without loop isolation valves, has expressed an interest in submitting an application.

Actions Remaining:

NRC review completed on Beaver Valley, except for revision to Technical Specifications to be proposed by the utility. Zion reapplication to update analyses will be necessary before NRC review. Other Westinghouse plants will probably submit similar applications if Beaver Valley is approved.

Status Updated: September 13, 1984.

Multi-Plant Action No. G-1

Title: Reactor Coolant Pump Trip

Priority: 1

Cognizant Assistant Director: G. C. Lainas

Cognizant Branch Chief: J. R. Miller

Lead Project Manager: D. H. Jaffe

Lead Technical Review Branch: Reactor Systems Branch

Problem:

The implementation of MPA G-1 involves the selection of a post LOCA RCP operation strategy (auto-trip, manual trip, or no trip) based upon calculations using approved analytic models. This strategy is to be implemented via operator training and procedures.

Background:

The NRC, its licensees, and the PWR vendors have been evaluating the reactor coolant pump (RCP) trip issue since the accident at TMI. The technical understanding of the industry and the requirements of NRC on this issue have changed twice in that period. As a result, there have been extensive studies to better understand the dynamic response of all classes of PWRs to small break LOCAs. Although some confirmatory information is still to be received concerning some models, we conclude that the analytical models are sufficiently reliable to be used by licensees to choose their own best method for RCP operation upon indication that a LOCA has occurred.

Current Status:

Generic Letters 83-10a through 83-10f were issued on February 8, 1983 to licensees and applicants (PWR vendor-specific) providing the NRC's position on reactor coolant pump trip. A 60-day response was requested (50.54f). All responses to GL 83-10 have been received. The members of the CE, Westinghouse and B&W Owners Groups have submitted generic analyses to satisfy the requirements of GL 83-10. Maine Yankee and Yankee Rowe have submitted plant-specific analyses to support their response to GL 83-10. We are presently awaiting endorsements of these reports by the Owners Groups together with implementation plans. We are also awaiting plant specific submittals from Haddam Neck and San Onofre Unit 1 facilities. We have issued requests for additional information to the Owners Group and Yankee.

Actions Remaining:

1. Review generic and plant specific RCP trip calculations.
2. Review licensee's endorsements of Owners Groups' generic reports, including commitments on training and implementation.
3. Receive and review responses to requests for additional information.
4. Issue generic or plant specific SERs with letter indicating approval of training and implementation schedule.

Status Updated: September 14, 1984
