

**New York Power
Authority**

J. Phillip Bayne
Executive Vice President
Nuclear Generation

August 2, 1984
JPN-84-53

Director of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Attention: Mr. Domenic B. Vassallo, Chief
Operating Reactors Branch No. 2
Division of Licensing

Subject: James A. FitzPatrick Nuclear Power Plant
Docket No. 50-333
Correction to Response to Request
for Additional Information Regarding
Containment Vent and Purge Valves

- References:
1. NRC letter, T. A. Ippolito to G. T. Berry, dated July 18, 1980, "Containment Purging and Venting During Normal Operation."
 2. PASNY letter, J. P. Bayne to T. A. Ippolito, dated May 12, 1981 (JPN-81-34), "Containment Purging and Venting During Normal Operation."

Dear Sir:

In Reference 1, the NRC requested additional information regarding containment purging and venting during normal operation. The Authority responded to these questions via Reference 2.

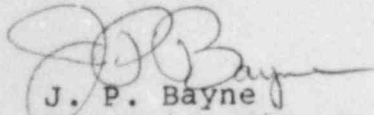

As a result of this request for additional information and subsequent discussions with the NRC staff members, the Authority initiated an in-depth study of these valves and their operability during DBA conditions. Detailed information and valve drawings were requested from the valve supplier, Fisher Controls, Inc.

The purpose of this letter is to inform you of an incorrect statement contained in our response. Recently, the Authority received information from Fisher Controls that confirms that the valves in question have off-set discs. Contrary to this fact, the Authority erroneously stated in Reference 2 (response to Question 4 on page 3) that these valves do not have off-set discs.

The information included in our May 12, 1981 response was the best available at that time. We are further investigating this issue with Fisher Controls.

If you have any questions, please contact Mr. J. A. Gray, Jr. of my staff.

Very truly yours,

J. P. Bayne
Executive Vice President
Nuclear Generation
