

DEC 13 1991

Docket Nos. 50-317
50-318

Baltimore Gas and Electric Company
Calvert Cliffs Nuclear Power Plant
ATTN: Mr. George C. Creel
Vice President, Nuclear Energy
MD Rts 2 & 4, P.O. Box 1535
Lusby, Maryland 20657

Dear Mr. Creel:

SUBJECT: COMBINED ROUTINE SAFETY INSPECTION NOS. 50-317/91-22 AND
50-318/91-22

This refers to the safety inspection conducted by A. Finkel of this office on September 23 - 27, 1991, at Calvert Cliffs Nuclear Power Plant Units 1 and 2, Lusby, Maryland, and to the discussion of our findings held by A. Finkel with members of your staff at the conclusion of the inspection.

Programmatic weaknesses are identified in the enclosed report which concern methods and procedures used in the receipt, handling and storage of safety-related materials. These concerns included the identification of procedures which required updating, the need to improve training for warehouse personnel, and the need to verify implementation of QA policy commitments in the material management and procurement areas. It is our understanding that, based on these program concerns, a commitment has been made to develop a Warehouse Upgrade Plan. Based on a verbal commitment made at the exit meeting, we understand that the upgrade will be included in your management tracking system.

Areas examined during this inspection are described in the NRC Region I Inspection Report which is enclosed with this letter. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector.

Within the scope of this inspection, no violations were observed.

No reply to this letter is required. Your cooperation with us in this matter is appreciated.

Sincerely,

Original Signed BYA

Lee H. Bettenhausen, Chief
Operations Branch
Division of Reactor Safety
