Subject: I & E Inspection Report 84-12
Notice of Violations
Inadequate Airborne Monitoring Procedures
R. E. Ginna Nuclear Power Plant, Unit No. 1
Docket No. 50-244

Dear Dr. Murley:

In accordance with the above subject which stated

"As a result of the inspection conducted on May 7-11, 1984, and in accordance with the revised NRC Enforcement Policy (10 CFR 2, Appendix C), published in the Federal Register Notice (49 FR 8583) dated March 8, 1984, the following violation was identified:

Technical Specification 6.11 and 6.8.1, requires, in part, the licensee to develop written radiation monitoring procedures consistent with 10 CFR 20. 10 CFR 20.103(a)3 requires suitable measurements of concentrations of radioactive materials in air.

Contrary to the above, the licensees procedures were inadequate in that procedures HP-4.3, HP-6.1 and HP-6.2, which require airborne monitoring, did not specify the technique to be used to monitor area and breathing zone concentrations and to provide suitable measurements of such concentrations."

the following is submitted in response.

Corrective action to address this violation is as follows:

We agree with the finding as stated. Our current procedures do not describe specifically how various air samplers should be utilized to obtain area and/or breathing zone samples. This could cause confusion for technicians and workers as to the proper placement of different types of samplers.

DATE July 27, 1984

TO Dr. Thomas E. Murley

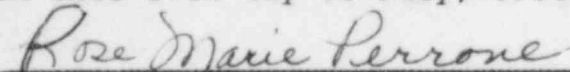

We are currently developing a procedure to cover the overall use of air samplers at the station. This procedure should be completed by September 1, 1984.

Note: This procedure was being developed as a result of our investigation of an incident reported in a previous inspection #50-244/80-02.

Very truly yours,

Roger W. Kober
