Subject:

Reference: Letter NO 92-001 dated January 6, 1992 from J. A. Bailey, WCNOC, to the NRC Docket No. 50-482: Reactor Containment Building Integrated Leak Rate Test

Gentlemen:

The purpose of this letter is to transmit the results of the second periodic Reactor Containment Building Integrated Leak Rate Test performed during the fifth refueling outage. Attachment 1 provides the Reactor Containment Building Integrated Leak Rate Test report. Attachment 2 provides a summary report of Type "A", "B", and "C" leakage tests which failed to meet the acceptance criteria of 10 CFR 50 Appendix J. Sections III.A.5(b), III.B.3 and III.C.3, respectively. These reports are being provided in accordance with 10 CFR, Appendix J.

The Reference transmitted Licensee Event Report 91-020-01 which discussed the failure of Essential Service Water system valves EF HV-32 and EF HV-34. The failure of the valves caused the Type "A" test "as found" leakage rate to exceed L_. In the "as left" condition the Integrated Leak Rate Test was considered successful. The Reference discussed the actions taken as a result of the valve failures and requested NRC review and approval of the Type "A" test schedule.

If you have any questions concerning this matter, please contact me or Mr. S. G. Wideman of my staff.

Very truly yours,

Bart D. Withers President and Chief Executive Officer
