Docket No. 50-346

Toledo Edison Company  
ATTN: Mr. Donald Shelton  
Vice President  
Nuclear  
Edison Plaza  
300 Madison Avenue  
Toledo, OH 43652

Gentlemen:

This refers to the special safety inspection conducted by Mr. J. M. Jacobson of this office and members of the NRR staff on August 23 through October 19, 1989, of activities at Davis-Besse Nuclear Power Station authorized by NRC Operating License No. NPF-3 and to the discussion of our findings with Mr. S. C. Jain and others of your staff at the conclusion of the inspection.

The enclosed copy of our inspection report identifies areas examined during the inspection. Within these areas, the inspection consisted of a selective examination of procedures and representative records, observations, and interviews with personnel. The focus of this inspection was the review of allegations concerning alternative testing activities performed in lieu of the ASME Code required hydrostatic pressure test.

During this inspection, certain of your activities appeared to be in violation of NRC requirements, as specified in the enclosed Notice. A written response is required.

In accordance with our letter to you dated November 2, 1989, addressing this issue, operability determinations on affected systems should be made available and a plan for corrective actions established.

In accordance with 10 CFR 2.790 of the Commission's regulations, a copy of this letter, the enclosures, and your response to this letter will be placed in the NRC Public Document Room.

The responses directed by this letter and the accompanying Notice are not subject to the clearance procedures of the Office of Management and Budget as required by the Paperwork Reduction Act of 1980, PL 96-511.
