Subject: Core Operating Limits Report
Cooper Nuclear Station
NRC Docket No. 50-298, DPR-46

Gentlemen:

Cooper Nuclear Station (CNS) Technical Specification 6.5.1.G requires that core operating limits be documented in the Core Operating Limits Report (COLR) and be submitted to the NRC prior to each reload cycle for changes to the following cycle specific parameters:

1. The Average Planar Linear Heat Generation Rate (APLHGR)
2. The Linear Heat Generation Rate (LHGR)
3. The K_f core flow Minimum Critical Power Ratio (MCPR) adjustment factor
4. The MCPR
5. The rod block monitor upscale setpoint

For Cycle 17 operations at CNS, a change has been made to the operating limits for MCPR and consequently, the COLR has been updated and it is being submitted as an attachment to this letter.

In accordance with 10 CFR 50.4 (b) (1), we are enclosing one original of the revised COLR for your use, and are transmitting one copy to the Regional Office, and one copy to the NRC Resident Inspector for CNS.
