Docket No. 50-329  
Docket No. 50-330

MEMORANDUM FOR: Region III File  
FROM: R. B. Landsman, Reactor Inspector, OSC  
SUBJECT: UAT APPROVAL

Mr. Darl Hood during a conference call including Mr. J. Harrison and myself on September 29, 1983, gave verbal approval to allow the licensee to proceed with underpinning through the UATs. This allows access to control tower piers CT1 and CT12 without tunneling under the turbine building from W8 and E8. This change is actually an improvement in that a smaller portion of the structure will be unsupported during construction of CT1 and CT12.
