SUBJECT: NRC INSPECTION REPORT 50-445/95-18; 50-446/95-18

This refers to the safety assessment and quality verification inspection conducted by Messrs. James A. Sloan, David B. Pereira, and Gregory E. Werner of this office on September 19-28, 1995, at the Comanche Peak Steam Electric Station, Units 1 and 2, facility. At the conclusion of the inspection, the inspectors discussed the findings with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress. The purpose of the inspection was to determine the effectiveness of your controls in identifying, resolving, and preventing problems that could degrade the quality of plant operations or safety.

The inspection confirmed that you have implemented a well-structured corrective action program, which provides an effective process for identifying, resolving, and preventing plant problems. The inspectors concluded that all personnel understood the primary method for reporting deficiencies and generally reported deficiencies at a low threshold, consistent with well-documented management expectations. In addition, the inspection identified that your staff had implemented effective, comprehensive, corrective actions for deficiencies, which addressed the identified root causes, and appropriately considered generic impact of the deficient conditions. Although the inspectors found some of the documentation to be unclear or incomplete, the implementation of the corrective actions was unaffected.

The inspection also concluded that your staff had performed comprehensive Nuclear Overview Department and external audits, and had tracked all corrective actions to completion. In addition, the Onsite and Offsite Safety Review Committees appeared to be effective forums for discussing and reviewing site activities with an apparent focus on safety.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be placed in the NRC Public Document Room (PDR).
