Re: Catawba Nuclear Station units 1 and 2  
Docket Nos. 50-413 and 50-414  
SD 413-414/81-11

Dear Mr. O'Reilly:

My letter of June 13, 1984 stated that all corrective action for this deficiency would be complete for Unit 2 by August 15, 1984. There are nine remaining valves that require testing to assure that they were properly modified by Borg Warner. This entails stroking the valve with the EMO several times.

Several of these valves cannot be tested because the EMO's have been temporarily removed for modification. Testing will be completed as these EMO's are made available. All corrective action for Unit 2 will, therefore, be completed by October 1, 1984.

Very truly yours,

Hal B. Tucker
