T. Ivan Selin nairman nuclear Regulatory Commission 1717 H Street, NW Washington, D.C. 20555

Dear Mr. Chairman:

I would like to take this opportunity to relay to you some recently noted concerns of the Toledo Coalition for Safe Fnergy regarding the Davis-Besse Nuclear Power Plant.

The Coalition has pointed to a report published last December by the Nuclear Regulatory Commission (NRC) on the status of our nation's nuclear power plants. According to the Coalition, this report cited six safety violations on the part of the Davis-Besse plant. According to the enclosed Toledo Blade article dated February 27th, Jan Strasma, a Nuclear Regulatory Commission spokesman, stated that the problems are not exclusive to Davis-Besse and are not serious enough to shut the plant down.

I would like to request a written response as to the safety violations cited in the NRC report and the status of efforts to correct any outstanding problems at Davis-Besse. I would also ask that you respond to me regarding the Toledo Coalition for Safe Energy's call to shut down Davis Besse until any safety violations are corrected.

Thank you for your prompt attention to this matter. I look forward to hearing from you soon.

Sincerely,

MARCY KAPTUR X yetur Member of Congress

## Group cites six 39 safety violations at Davis-Besse

BY TOM TROY

2/27/92

A local anti-nuclear group is calling for Toledo Edison's Davis-Besse Nuclear Power Station to be shut down until six alleged safety problems are corrected.

"Until the plant is closed and an independent assessment of safet; factors is conducted, the health and safety of northwest Ohioans cannot be guaranteed," Dini Schul, a spokesman for the Toledo Coalition for Safe Energy, said this week.

The problems were cited in a Nuclear Regulatory Commission report on the nation's nuclear plants, which was published in December.

But an NRC official disagrees.
The shortcomings are not serious enough to warrant pulling the plug on the 860-megawatt generator, which provides electricity to about half of Toledo Edism's 283,000 customers, said NRC spokesman Jun

Mr. Stasms said yesterday the problems affect "virtually all plants," and that the reactors operators are supposed to have plans to fix them.

"It's not as if they're being ignored. And it's not something we feel is of sufficient magnitude that we require the plant to be shut down." Mr. Strasma said.

One of the safety lastes dited is a potential for Davis-Besse's normal and emergency power supplies to fail simultaneously, causing a station blackout.

Toledo Edison snokesman Rick Kelly said the utility has acquired a third backup diesel generator to satisfy the NRC's concerns.

"It is now in the process of being tested. We're probably one of the first plants in the country to [add a third generator]." Mr. Kelly said.

The NRC also had called for improved quality assurance and maintenance of Davis-Be use's power-operated relief vs'vcs. These

Three Mile Island, contributing to the 1979 accident there. Mr. Streems said the valve correction at Davis-Besse was to be completed last November.

Mr. Kelly said last night that officials were not aware of any uncorrected problems involving the valves.

During a visit to the plant last October, NRC Chairman Ivan Selin praised improvements of the motoroperated valves.

Mr. Kelly said that NRC noted improvements in the plant's overall operations in its most recent 10-month evaluation, giving Davis-Besse the highest possible marks for emergency preparedness and security and for maintenance and sur-configures.

The Toledo Coelition for Safe Energy, in the past an outspoken critic of the plant, has been quiet for several years.

Ms. Schut attributed the inactivity to the departure of founder blike Ferner to become a Toledo city councilman and to the fact that "Davis-Bease has been . . operating very weil lately."

But she said the organization is worried about President Bush's national energy policy, which savocates a new generation of Juciear power pls—and "one-step licensing," under which the site and the plant would be licensed simultaneously.

Nuclear power also has become an issue between two Democratic presidential candidates. Former California Gov. Jerry Brown opposes nuclear power, while former Massachusetts Sen. Paul Taongas favors nuclear power.

"I'm very concerned that if Tsongas were to be our next president that he is pro-nuclear," Ms. Schut said, adding, "I'm probably not as afraid of Tsongas as I was of [former White House Chief of Staff John] Sunun. He is so pro-nuclear."
