Subject: Catawba Nuclear Station
Docket Nos. 50-413 and 50-414
Personnel Exposure Report - 1989 and 1990 REVISIONS

In a letter dated March 12, 1992, Duke Power informed the NRC of an error in the computer codes that compile the Personnel Exposure Report pursuant to Technical Specification 6.9.1.5 (a). This report provides a tabulation of the number of station, utility, and other personnel receiving exposure greater than 100 mrem/year, followed by the total dose for each respective worker classification and job function. A revision to the 1991 report was included in the March 12, 1992 letter along with a commitment to review the 1988, 1989, and 1990 reports and resubmit them as appropriate.

A review of the 1988, 1989, and 1990 Personnel Exposure Reports found discrepancies in the 1989 and 1990 reports. Although all of the total dose figures were correct, the distribution of the dose by the five Technical Specification designated job functions did not accurately reflect the breakdown as Duke Power would like to see it reported. No discrepancies were found in the 1988 report.

Accordingly, find attached the revised 1989 and 1990 Personnel Exposure Reports.

Very truly yours,

M. S. Tuckman
