SUBJECT: NRC INSPECTION REPORT 50-483/95-13

This refers to the inspection conducted by Messrs. D. Passehl, F. Brush, and L. Ellershaw of this office on October 1 through November 11, 1995, at the Callaway Nuclear Plant facility. The purpose of the inspection was to determine whether activities authorized by the license were conducted safely and in accordance with NRC requirements. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress.

During this inspection an inadequate procedure resulted in an inadvertent transfer of approximately 700 gallons of reactor coolant water. In addition, the inspectors noted that your staff had identified problems with misalignment of systems due to inadequate communications or lack of attention to detail. Although the consequences and safety significance for these events were minor, there is potential for a more serious event to occur. We recognize that you identified an adverse trend in this area at an early stage. However, there continue to be scattered problems indicating that your corrective and preventive actions have not been fully effective.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter, its enclosure(s), and your response will be placed in the NRC Public Document Room (PDR).

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

J. E. Dyer, Director
Division of Reactor Projects
