Three (3) of the circuits are associated with smoke detectors and have overcurrent protection devices. The required surveillance test was performed on these circuits and found to be satisfactory. Four (4) circuits are associated with lighting inside the personnel airlock and personnel escape airlock. These circuits do not have overcurrent protection and, as such, the electrical circuit breakers have been open in accordance with T/S 3.8.4. A plant modification is being processed to install overcurrent protection. The Licensee will submit a Technical Specification change no later than November 15, 1984, requesting that the seven (7) circuits be added to Table 3.8-1.
