ABSTRACT (Limit to 1400 spaces, i.e., approximately fifteen single-space typewritten lines) (16)

While performing Type C Leak Rate Testing, MSIV-86B, CRD-412A, PCAC-V16-19-8, FDW-96A and CA-8°C were found to have seat leakage above that permitted by Tech. Spec. section 3.7.A.4. This resulted in the total Appendix J Type B and C limit of 14.75 lbm/Hr. being exceeded which does not meet Tech. Spec. section 3.7.A.3 requirements. (By procedure, VY uses the maximum pathway leakage in calculating total penetration leakage.)

Vermont Yankee has performed maintenance on all of the above valves and re-tested them to ensure that both total penetration and individual valve seat leakages are within Tech. Specs.

TEXT (If more space is required, use additional NRC Form 366A's) (17)

While performing Type C Leak Rate Testing MSIV-86B, CRD-412A, PCAC V16-19-8, FDW-96A and CA-89C were found to have seat leakage above that permitted by Tech. Spec. section 3.7.A.4. This resulted in the total Appendix J Type B and C limit of 14.75 lbm/Hr being exceeded which does not meet Tech. Spec. section 3.7.A.3 requirements. (Note: By procedure, VY uses the maximum pathway leakage in calculating total penetration leakage.)

For MSIV-86B, CRD-412A, PCAC V16-19-8 and CA-89C, a second isolation valve in the applicable system was tested and met the acceptable criteria. For FDW-96A, containment was provided by the water seal on the inboard check valve and the plant's capability to maintain a pressure greater than P_a on the feedwater system.

Total penetration leakage based on the minimum pathway leakage equaled 9.83 lbm/Hr. Minimum pathway leakage in used to determine Appendix J Type A total containment leakage.

Vermont Yankee has performed maintenance on all of the above valves and retested them to ensure that both total penetration and individual valve seat leakages are within Tech. Specs.

Based on the above there were no adverse consequences to the health and safety of the public.

No similar events have been reported on MSIV-86B, CRD-412A, PCAC V16-19-8 or CA-89C in the last five years.

A similar event was reported on FDW-96A as LER 83-10.

Reportable Occurrence No. LER 84-11, Revision 1

Dear Sirs:

As defined by 10CFR50.73, we are reporting the attached Reportable Occurrence as LER 84-11, Revision 1.

Very truly yours,

James P. Pelletier
Plant Manager
