Docket No. 50-293  
License No. DPR-35

Revised Bases Page

Reference: BECo Letter 95-074, dated July 14, 1995, "Proposed Technical Specification Change to Section 2.1, Bases: Safety Limits; Section 3.3.C, Scram Insertion Times; and Section 4.11.C, Minimum Critical Power Ratio"

Attached is a revised Bases page to the referenced proposed Pilgrim Station Technical Specification change. Please replace page B2-2 in the referenced package with the attached revised page B2-2.

The revised page B2-2 includes the GE11 GEXL correlation axial power profile and R-factor ranges which were inadvertently omitted from the GE design reference, NEDE-31152-P, "GE Fuel Bundle Designs."

The revised page also corrects an error in GE11 GEXL correlation mass flux range that is present in the GE design reference, NEDE-31152-P, "GE Fuel Bundle Designs."

These changes are administrative and do not impact the No Significant Hazards Determination analysis provided in the referenced submittal.
