Walter A. Paulson, Acting Chief  
 Operating Reactors Branch No. 5  
 Division of Licensing  
 U.S. Nuclear Regulatory Commission  
 Washington, DC 20555

Dear Mr. Paulson:

Subject: Oyster Creek Nuclear Generating Station  
 Docket No. 50-219  
 Isolation Condenser System Piping Cracked Welds-  
 Repair and Failure Analysis

Reference: Letter dated June 28, 1984, D.M. Crutchfield, US-NRC to  
 P.B. Fiedler, GPUN, Safety Evaluation of the Implementation  
 of NUREG-0313 Rev. 1

The purpose of this submittal is to respond to your request stated in the above referenced letter. In that letter, the NRC stated that prior to startup from our current Cycle 10 refueling outage, the staff expects to review and approve repairs and replacements made to the isolation condenser system piping. In response to this request we are submitting Technical Data Report (TDR) 580 which includes repair and failure analysis data. Additionally, the TDR will supply you with the corrective action we have implemented as a result of Licensee Event Report 84-005 dated May 1, 1984. GPUN will also be supplying you with this information in the form of a supplemental LER.

Should you require any further information please contact Mr. Drew Holland, Oyster Creek Licensing Manager at (609)971-4643.

Very truly yours,

Peter B. Fiedler  
 Vice President and Director  
 Oyster Creek
