FLORIDA POWER CORPORATION
RESPONSE
INSPECTION REPORT 84-17

VIOLATION:

The following violations were identified during an inspection conducted on May 15-18, 1984. The Severity Levels were assigned in accordance with the NRC Enforcement Policy (10 CFR Part 2, Appendix C).

10 CFR 20.203(c)(3) requires in part that each entrance or access point to a high radiation area shall be established in such a way that no individual will be prevented from leaving a high radiation area.

Contrary to the above, on May 16, 1984, the inspector observed the use of a chain and padlock to control the access to containment which is a high radiation area. This type of locking device if locked while individuals were inside the high radiation area would prevent individuals from leaving the high radiation area.

This is a Severity Level V Violation (Supplement IV).

FLORIDA POWER CORPORATION'S POSITION: Florida Power Corporation (FPC) agrees with the Violation as stated.

DESIGNATION OF APPARENT CAUSE: The cause of this Violation was due to misinterpretation and implementation of CR-3 Technical Specification 6.12.

CORRECTIVE ACTION: The "High Radiation Area" sign referenced in the Violation has been relocated to the personnel access hatch.

CORRECTIVE ACTION TO PREVENT RECURRENCE: An investigation was conducted and concluded that other posted High Radiation Areas were not affected by the misinterpretation.

A Radiation Protection procedure will be revised to more clearly reflect the requirements of 10 CFR 20.203(c)(3).

DATE OF FULL COMPLIANCE: The High Radiation Area sign was relocated on June 21, 1984. The procedure revision will be accomplished by December 31, 1984.
