ATTN: Mr. Michael F. Weber, Chief
Decommissioning and
Regulatory Issues Branch

Docket No. 50-267

SUBJECT: Final Survey Release Records

Dear Mr. Weber:

Enclosed for your information are five example Release Records from the Fort St. Vrain (FSV) Final Survey Program. The enclosed Release Records provide examples of the format that Public Service Company of Colorado (PSCo) will use to describe survey areas and document final survey results. Release Records will be included in the FSV Final Survey Report for each Survey Area. The NRC requested example data packages during an October 16, 1995, telephone conference with Messrs. Clayton Pittiglio and David Fauver of your staff.

The enclosed Release Records include the following Survey Areas:

- | | |
|-------------------|---|
| Survey Area 0344 | <i>Training Building #109, Simulator Room, Walls Above 2 meters and Ceiling</i> |
| Survey Area B0014 | <i>Chiller Building #3, Gas Charging Building #4, Security Diesel Generator Building #36, Acid Storage Tank Pump Building #1008</i> |
| Survey Area B0005 | <i>North Warehouse Building #13, Electrical Warehouse Building #14, Restroom and Shower Building #1014</i> |
| Survey Area 0350 | <i>Visitor Center, Building #107, Auditorium</i> |
| Survey Area B0017 | <i>Electrical Warehouse, Building #14</i> |

The above five Survey Areas were reviewed by the NRC during an inspection of the FSV Final Survey Program, conducted from September 25-28, 1995. Due to the current status of final survey activities, exposure rate measurements are not included in the

enclosed example Release Records. Exposure rate measurements will be included before the Release Records are submitted as part of the FSV Final Survey Report.

If you have any questions regarding the enclosed information, please contact Mr. M. H. Holmes at (303) 620-1701.

Sincerely,

Frederick J. Borst

Decommissioning Program Director

**Release Record - Survey Area
(EXAMPLE)**

Survey Package ID: B0017

Survey Area Description: Electrical Warehouse - Building #14

Survey Area Operational History:

The Electrical Warehouse - Building #14 is located within the Protected Area fence and north of the road running west to east from the main truck access gate. Located within the building are a main workshop room, three (3) storage rooms, a corridor and a soil drying room.

The soil drying room, located in the southeast corner of the building, has been in service since 12/94 as a controlled soil drying and sieving area and will be surveyed in accordance with Survey Package ID: I0010.

In the late 1970's and early 1980's, radioactive material was stored in the northeast area of the Electrical Warehouse. Records indicated there were no spills or occurrences in this area which resulted in contamination.

The south central storage room in Building #14 was initially classified as Unaffected and was surveyed in accordance with Survey Package ID: B0005 instructions. A hot spot of total surface activity $> 50\%$ of the guideline value of 5,000 dpm/100 cm₂ for an Unaffected Survey Unit was found in the south central storage room. The survey unit was subsequently removed from Survey Package ID: B0005, reclassified as Affected and Survey Package ID: B0017 prepared to provide new survey instructions for the area.

Scientific Ecology Group
Radiological Engineering & Decommissioning Services
Fort St. Vrain Nuclear Generating Station - Decommissioning Project

Release Record - Survey Area

Survey Package ID: B0017

Survey Area Decommissioning and Remediation Activities:

An area of elevated activity on the concrete floor in the south central storage room was decontaminated on 9/21/95 (Survey Package ID: B0005 - survey measurement location number 24, download report 514). The decontamination consisted of removing approximately 100 cm² of the top several millimeters of the concrete floor.

An area of elevated activity on the concrete floor in the southeast storage room was decontaminated on 9/21/95 - survey measurement location number 285, download report 655). The decontamination consisted of removing approximately 100 cm² of the top several millimeters of the concrete floor.

Several contaminated tools were removed from the building.

Isolation and Control Measures: Level 2 Control

No use, storage or movement of radioactive material was permitted in Group B buildings.

All radioactive storage areas outside the Reactor Building were controlled by the Radwaste Supervisor.

The Radwaste Supervisor was notified that final surveys of Group B Buildings were commencing and that no radioactive material was authorized in these areas.

All access points to these buildings were posted with a Level 2 Isolation Label.

Final configuration of this area was maintained throughout the entire survey process. Authorization was required prior to the painting of surfaces, structural renovation and/or removal of components from this area.

Survey Area Conclusions:

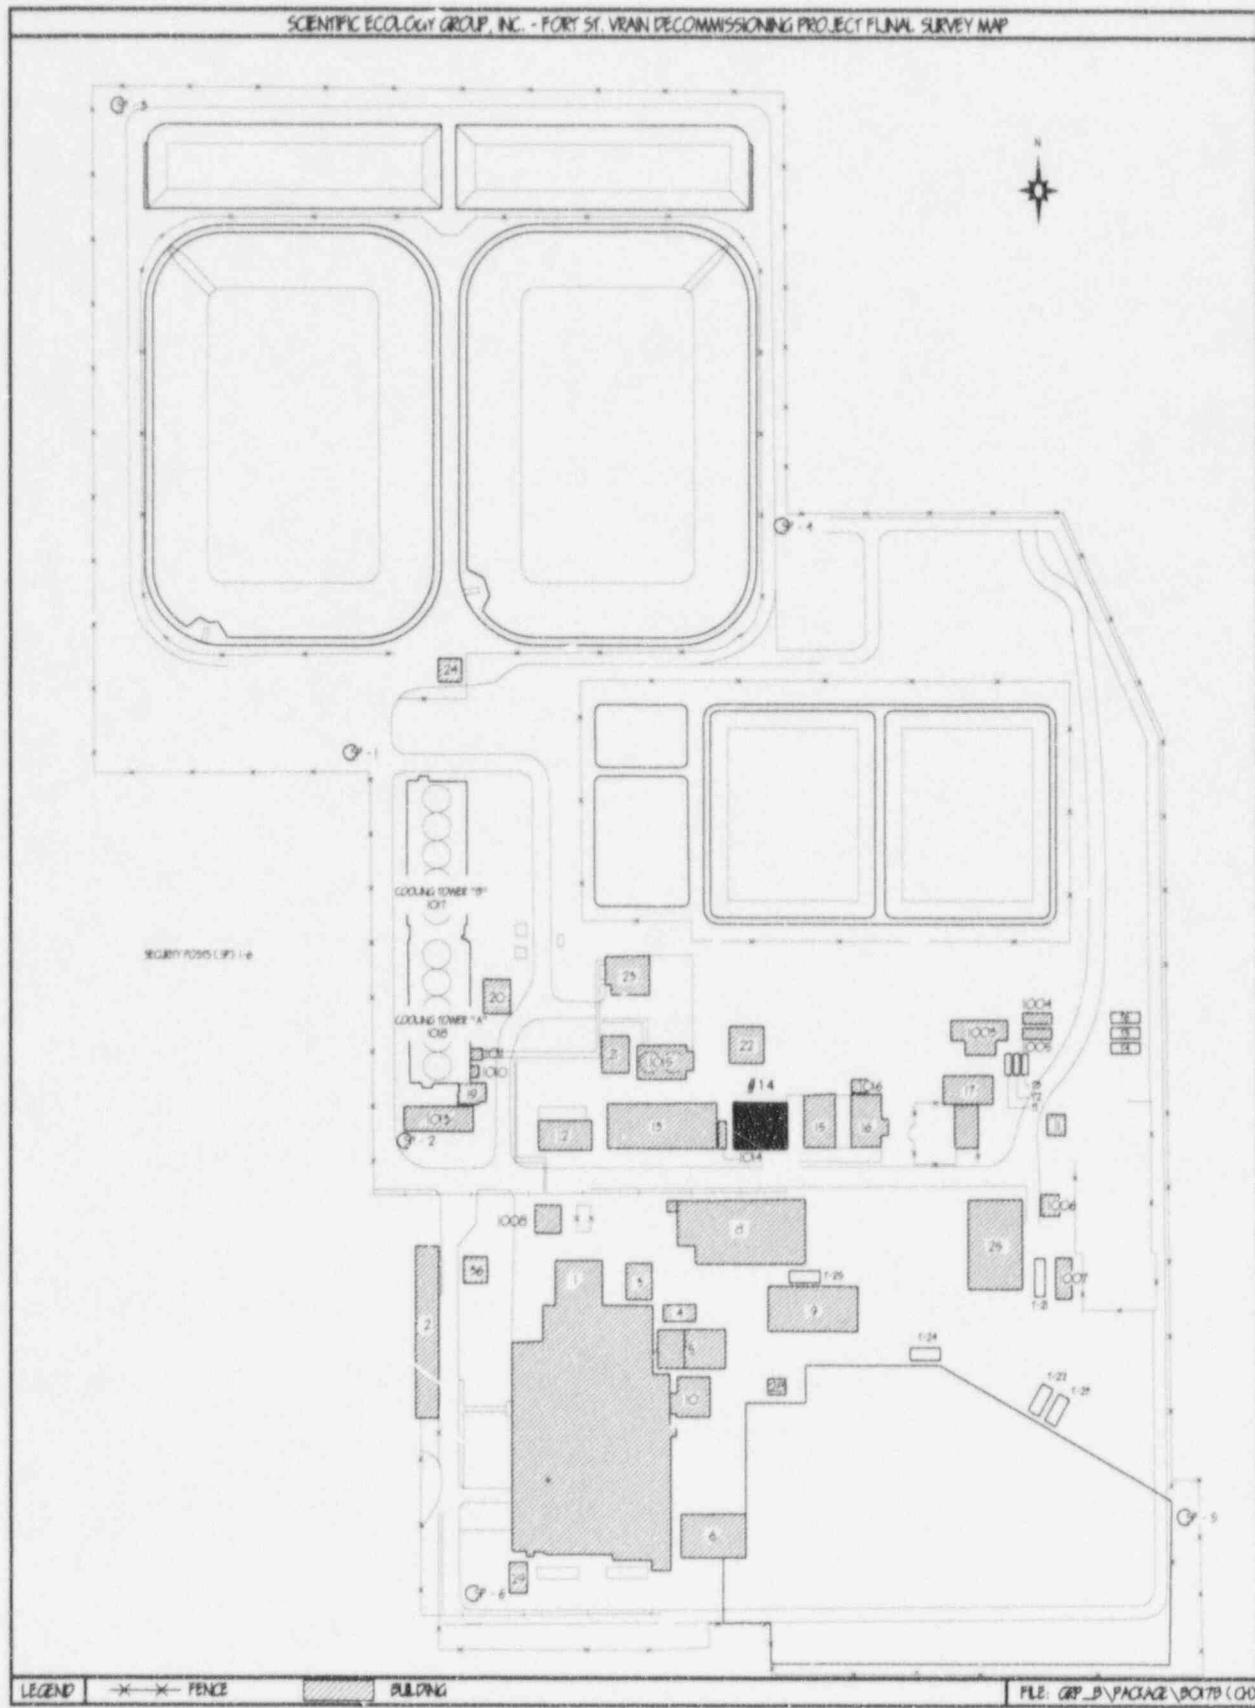

The results of exposure rate measurements collected within these survey units have not been formally evaluated and have not been included in this "Example" Release Record.

The results of total and removable surface activity measurements collected within these survey units meet the criteria for release for unrestricted use.

(B017B0AB01 and B017B02B01)

Survey Design:

Beta Scan: Scanned 100% of accessible surfaces and identified areas of elevated activity.

Total Surface Activity: 130 measurements. Collected total activity (direct) measurements at grid intersections and at any area(s) of elevated activity identified during the scan.

Exposure Rate: 62 measurements. At 1 meter from total surface activity survey measurement locations marked for exposure rate measurements.

$\beta\gamma$ Smears: 130 measurements. At same survey measurement locations as total surface activity measurements.

Survey Unit Investigations:

11/21/95

A review of the data set, particularly the graphical presentation of the data, indicated a trend in the number and magnitude of positive results obtained from the surfaces located near the south and east walls of the building. The net results do not exceed the investigation action levels.

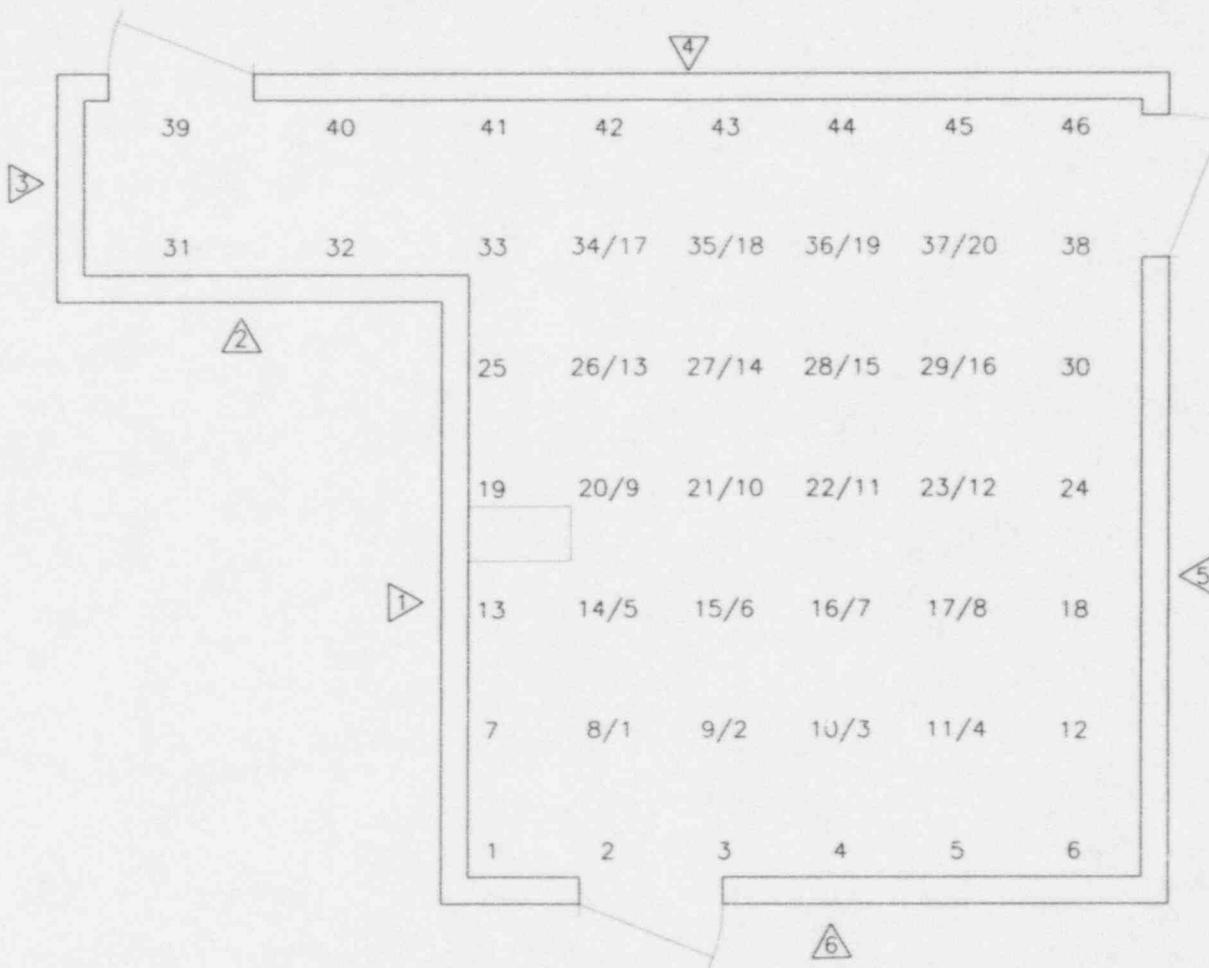

To evaluate this condition, the local area background values specific to the surfaces located near the south and east walls of the building were selected for correction of the gross measurement results obtained from these surfaces. The standard approach is to use the average of all local area background values collected from the survey unit. The use of the local area background values specific to these surfaces resulted in net results for these surfaces which were comparable to the net results obtained from other portions of the building.

It has been determined that the measurements collected from surfaces located near the south and east interior wall of the building were affected by the contribution from activated concrete which was staged for shipment outside of the building. The use of the average of the local area background values caused a number of the net results obtained from surfaces located near the south and east walls of the building to be biased slightly high. Net measurement results for floor survey locations #1 through #46 (B017B0AB01), and wall survey locations #95 through #130 (B017B02B01) appear to have been affected.

The net results, as originally corrected for local area background using the average of the local area background values, do not include significant error relative to the action levels and release criteria. For reporting purposes, no adjustment to the local area background value is required for these measurements.

Release Record - Survey Unit

Location Code: B0017AZ001CZT01
(B017C02A01)

Survey Design:

Beta Scan: Selected measurement locations from those surfaces of highest contamination potential. Scanned a minimum of 1 m² at each total surface activity survey measurement location and identified areas of elevated activity.

Total Surface Activity: 40 measurements. Collected total activity (direct) measurements within each previously scanned 1 m² and at any area(s) of elevated activity identified during the scan.

Exposure Rate: 30 measurements. At 1 meter from total surface activity survey measurement locations.

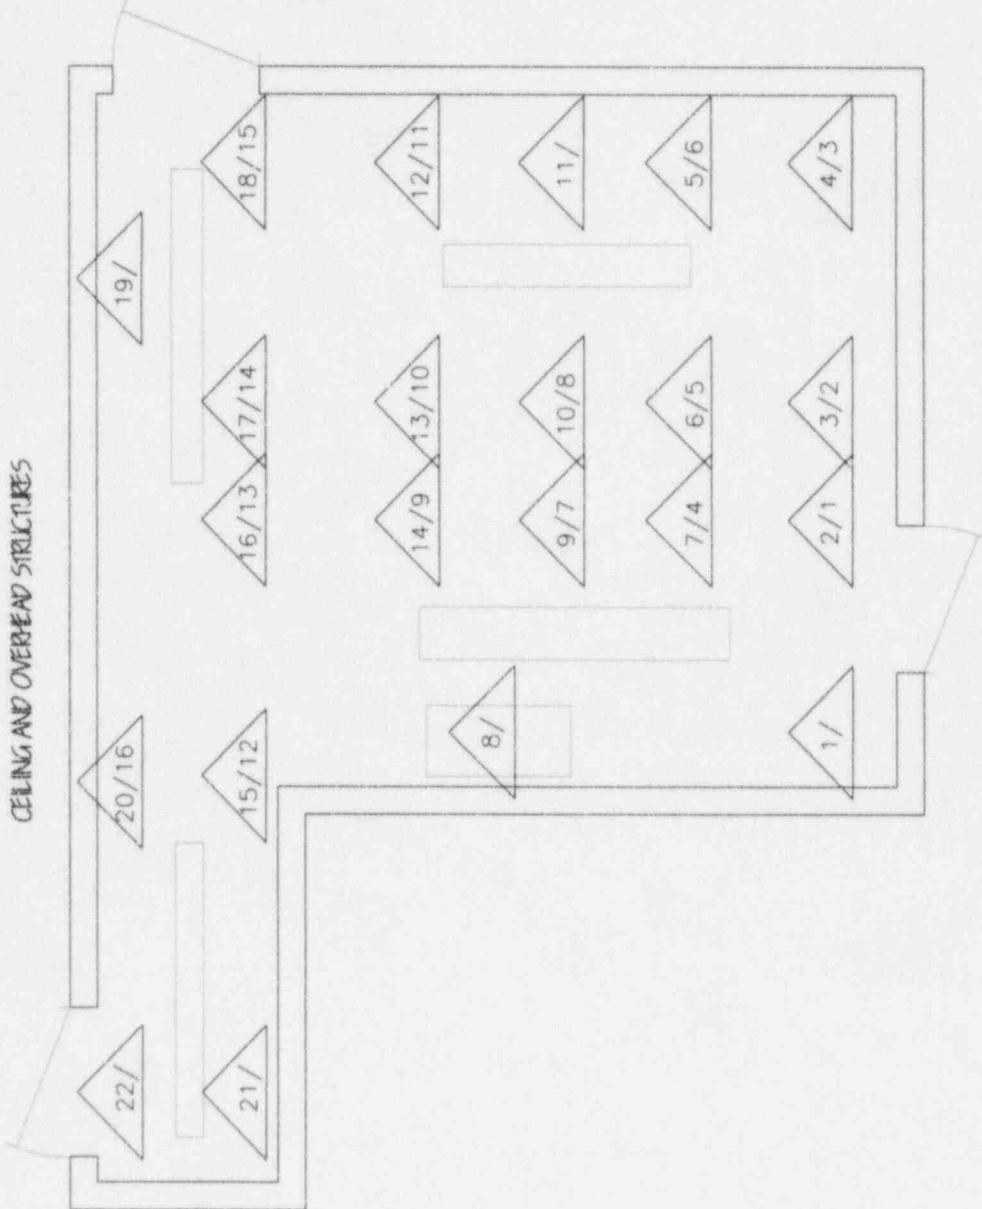

$\beta\gamma$ Smears: 40 measurements. At same survey measurement locations as total surface activity measurements.

Survey Unit Investigations: None

Survey Unit Classification: BZ - Suspect Affected

Survey Reason: T01

Survey Unit Description: Electrical Warehouse - Building #14
North Shop Area
South Central Corridor
Southeast Room
Floors - Concrete bare

Survey Unit Decommissioning and Remediation Activities:

An area of elevated activity in the Southeast Storage Room floor was decontaminated on 9/21/95 - the area surrounding survey measurement location number 285, download report 655. The decontamination consisted of removing approximately 100 cm² of the top several millimeters of the concrete floor surface.

Radiological Engineering & Decommissioning Services
Fort St. Vrain Nuclear Generating Station - Decommissioning Project

Release Record - Survey Unit

Location Code: B0017FZ001BZT01, B0017FZ001BZR01
(B017B0AF01, and B017BRAF01)

Survey Design:

Beta Scan: Scanned 100% of the accessible surfaces. Marked areas of elevated activity.

Total Surface Activity: 329 measurements. Collected measurements at grid intersections. Then collected measurements at any areas of elevated activity identified and marked during the scan. Used the next sequential survey measurement location number for the additional measurements.

Exposure Rate: 163 measurements. Collected measurements at 1 meter from the survey measurement locations marked for exposure rate measurements.

$\beta\gamma$ Smears: 329 measurements. Collected at the same survey measurement locations as the total surface activity measurements.

Survey Unit Investigations:

10/24/95

Building #14 was originally classified as Unaffected and was surveyed in accordance with the instructions provided in Survey Package ID: B0005. A hot spot of total surface activity which was greater than 50% of the guideline value of 5,000 dpm/100 cm² was identified on the concrete floor in the South Central Storage Room of Building #14 during the initial final survey of the area. An investigation survey conducted in the immediate area of the hot spot confirmed the elevated activity. As a result of the investigation, the survey unit was reclassified as Affected and Survey Package ID: B0017 generated.

The concrete floor surrounding the identified hot spot was decontaminated by removing the top several millimeters of concrete. An area of approximately 100 cm² was decontaminated. During the initial final survey of the storage room conducted in accordance with Survey Package ID: B0017, contaminated tools were discovered (Refer to RORs 95-058 and 95-059) and the final survey was discontinued.

A characterization survey was performed in the adjacent storage rooms and the main workshop of Building #14. The characterization survey consisted of a 100% beta scan and smears on approximately 1100 hand tools. Three additional tools with fixed contamination were identified (Refer to ROR 95-061) during the survey. As a result of the characterization survey, a radioactive materials storage area was established in Building #14, the three contaminated tools were transferred to the marked storage area and the remaining portions of Building #14 reclassified as Affected. The contaminated tools were removed from the building and the radioactive materials storage area cleared before initiation of the final survey under Survey Package ID: B0017.

11/6/95

SML 285 of download report 655 was collected on the concrete floor of the southeast storage room in Building #14 and indicated total surface activity of 6777 dpm/100 cm². The location code for these measurements was B017B0AF01. The area was decontaminated by removing the top several millimeters of concrete. Following decontamination, the 1 x 1 meter grid containing SML 285 and each adjoining grid was resurveyed.

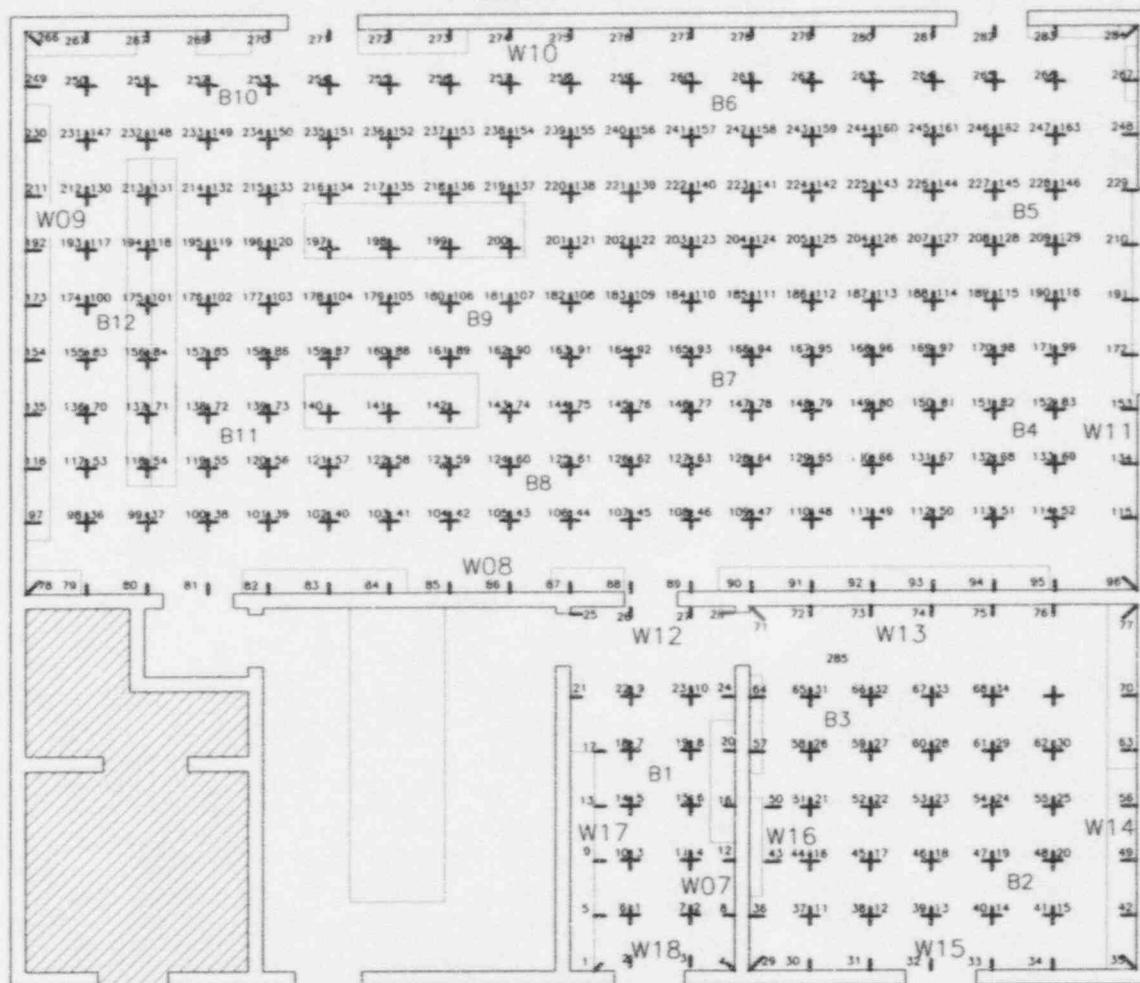

A 100% beta scan was performed on the concrete floor surface of the nine square meter area with five total activity measurements collected from each grid. A total of 45 measurements were collected under the location B017BRAF01 (download report 698). Smears were collected at the total activity measurement locations. No additional exposure rates were obtained.

SML 285 was removed from the data set for the survey unit. While the 45 measurements collected under location code B017BRAF01 were added to the survey unit's data set as SML 286 - 330.

Fort St. Vrain Nuclear Generating Station - Decommissioning Project

Release Record - Survey Unit

Location Code: B0017SZ001BZT01
(B017B02S01)

Survey Design:

Beta Scan: Scanned 100% of accessible surfaces and identified areas of elevated activity.

Total Surface Activity: 50 measurements. Collected total activity (direct) measurements at grid intersections and at any area(s) of elevated activity identified during the scan.

Exposure Rate: N/A

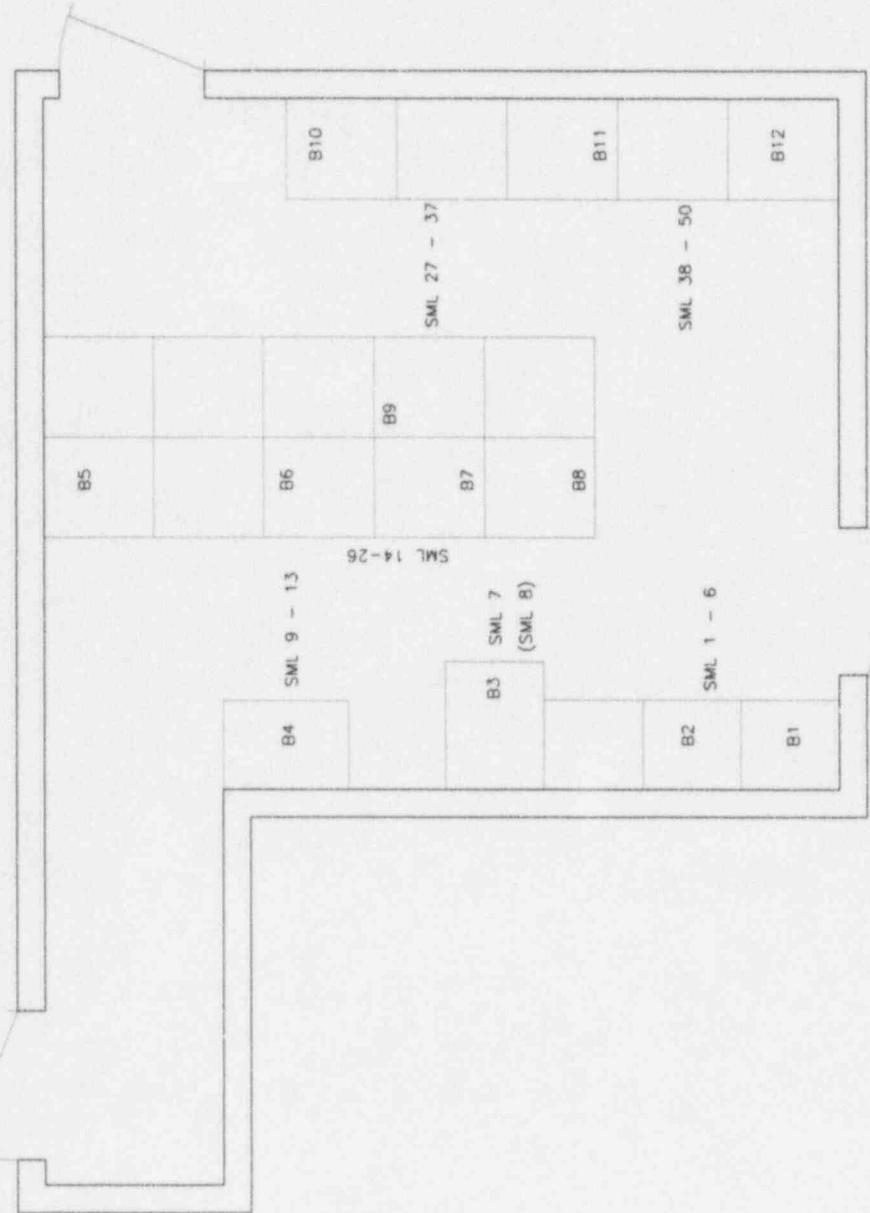

$\beta\gamma$ Smears: 50 measurements. At same survey measurement locations as total surface activity measurements.

Survey Unit Investigations: None

**Release Record - Survey Area
(EXAMPLE)**

Survey Package ID: 0350

Survey Area Description: Visitor Center - Building #107 - Center Meeting Room (Auditorium)

Survey Area Operational History:

The Visitor Center, Building #107, had no history of containing licensed quantities of radioactive material. However, non-licensed quantities of naturally occurring radioactive material, used for instructional demonstrations, were stored in display cases in the south hallway of the building. The south hallway was initially classified as Affected and was surveyed as part of the instructions in Survey Package ID: 0346.

While surveying the Auditorium in accordance with Survey Package ID: 0346, approximately 13 square meters of the carpeted floor, 6 square inches on the wooden stage and 6 square inches on a brick wall indicated elevated activity. Two carpet samples were removed for qualitative analysis by gamma spectroscopy and indicated that the elevated activity was primarily due to uranium (U-238) with trace amounts of Co-60. Approximately 13 square meters of the carpeted floor and 6 square inches of the wooden stage floor were removed prior to initiation of Survey Package ID: 0350.

The Auditorium lower walls and floor were reclassified as a Suspect Affected Survey Unit and gridded in 1 x 1 meter grids.

Scientific Ecology Group
Radiological Engineering & Decommissioning Services
Fort St. Vrain Nuclear Generating Station Decommissioning Project

Release Record - Survey Area

Survey Package ID: 0350

Survey Area Decommissioning and Remediation Activities:

The elevated activity on the walls was due to the material of construction. After application of an appropriate background for the material, activity levels were found to be below the action levels for an Unaffected Survey Unit. Once corrected, the highest net activity measurement found on the brick walls was 576 dpm/100 cm².

Elevated count rates on the Auditorium stage wood floor were identified during the scan portion of the final survey. The area was decontaminated prior to performing a final re-survey.

Isolation and Control Measures: Level 1 Control

No use, storage or movement of radioactive material was permitted in Group A Buildings.

All radioactive storage areas outside the Reactor Building were controlled by the Radwaste Supervisor.

The Radwaste Supervisor was notified that final surveys of Group A Building were commencing and that no radioactive material was authorized in these areas.

Prior to the final survey of Group A Buildings, training sessions were held with site personnel regarding final survey isolation controls.

Final configuration of this area was maintained throughout the entire survey process. Authorization was required prior to the painting of surfaces, structural renovation and/or removal of components from this area.

Survey Area Conclusions:

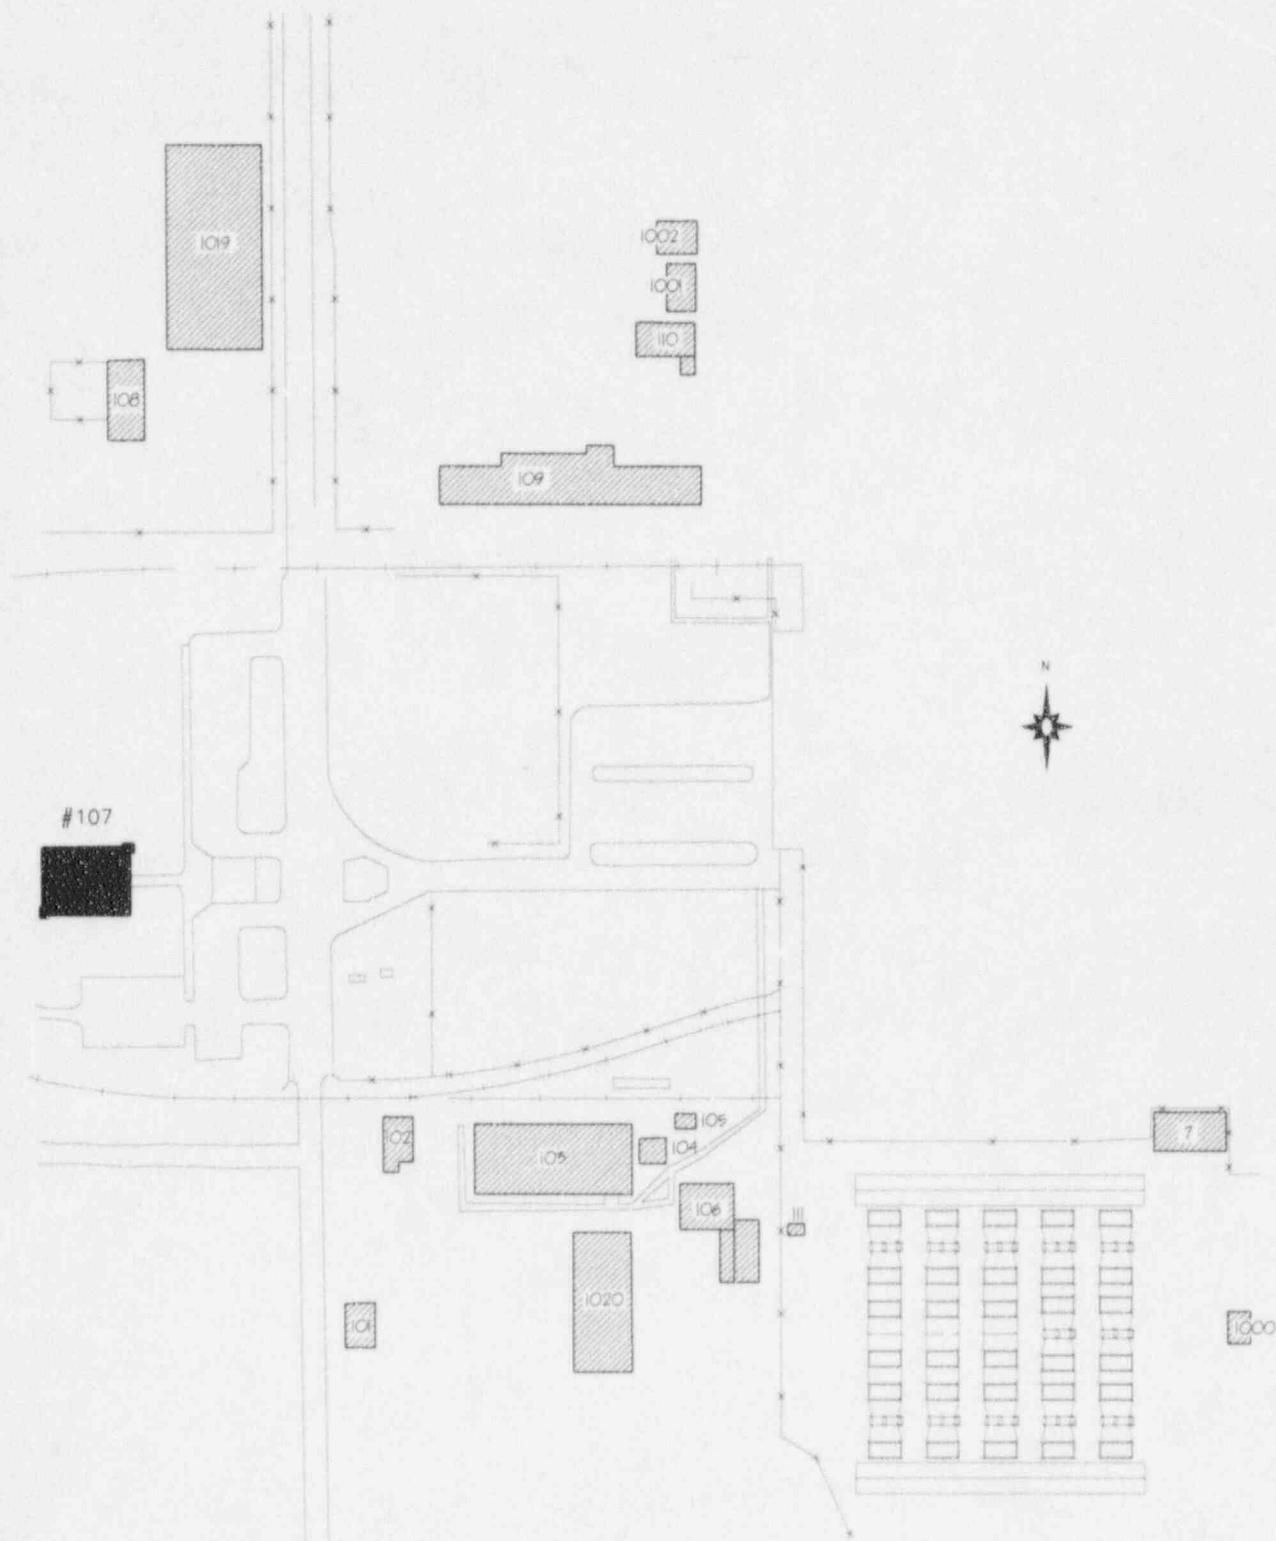

The results of exposure rate measurements collected within these survey units have not been formally evaluated, and have not been included in this "Example" Release Record.

The results of total and removable surface activity measurements collected within these survey units meet the criteria for release for unrestricted use.

(0350B1CF01, 0350B1RF01, 0350B1KF01, 0350B2KF01)

Survey Design:

Beta Scan: Scanned 100% of remediated floor surfaces and a 1 meter perimeter around each remediated area. All other floor surfaces were scanned during an investigation survey (see Survey Package ID: 0346).

Total Surface Activity: 134 measurements. Collected total activity (direct) measurements at marked areas on the floor surfaces.

Exposure Rate: 65 measurement. At 1 meter from total surface activity survey measurement locations marked for exposure rate measurements.

$\beta\gamma$ Smears: 134 measurements. At same survey measurement locations as total surface activity measurements.

α Smears 17 measurements. At same survey measurement locations as total surface activity on rubber covered concrete floor and on painted wood floor of stage.

Survey Unit Investigations:

Auditorium Stage - wood floor

Elevated count rates were identified during the scan survey portion of the final survey (location code 0350B1KF01). A fixed point measurement collected at the area of elevated activity (sample location 30) indicated 16,280 dpm/100 cm² without background subtracted.

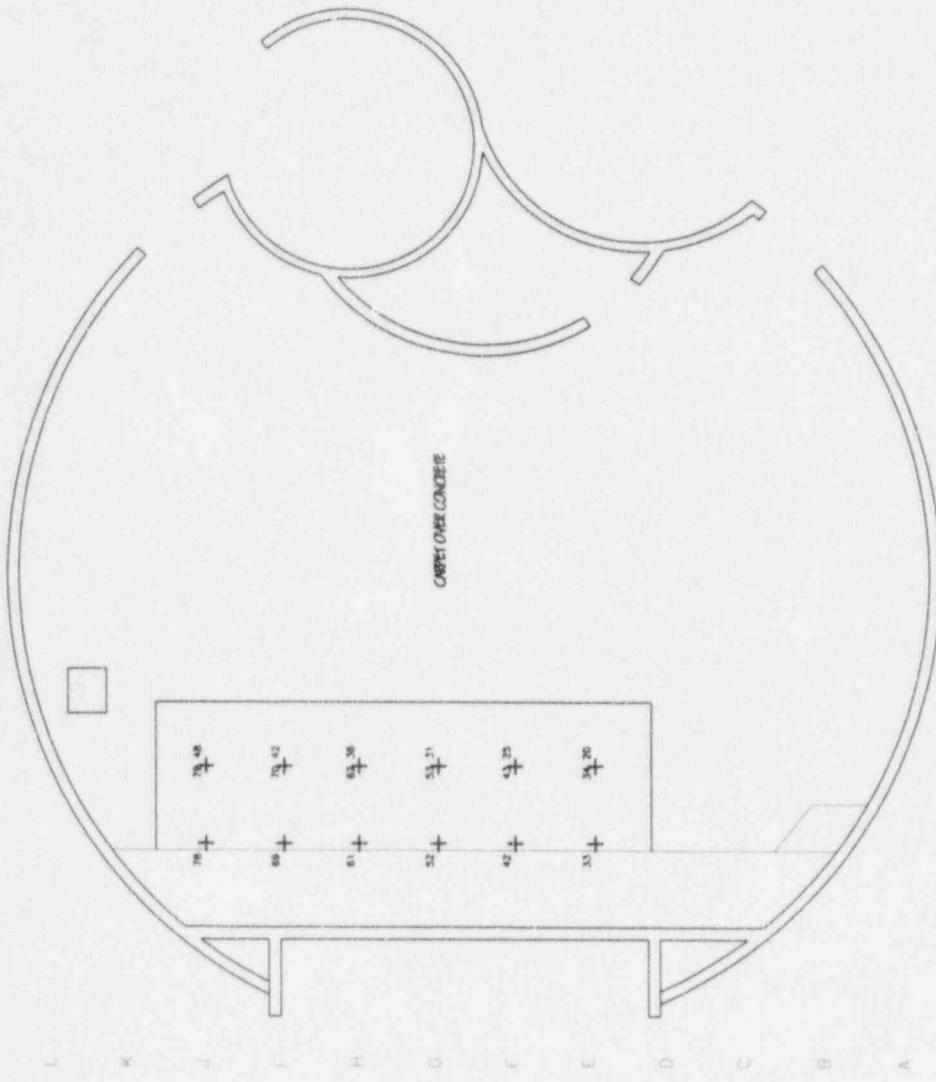

This location was further decontaminated and resurveyed. The resurvey consisted of a scan of the surrounding surfaces and 5 fixed-point measurements at the location of elevated activity (location code 0350B2KF01). The elevated measurement from the first resurvey (sample

location 30) was extracted from the data set, and the additional 5 measurements from the second resurvey (0350B2KF01) were inserted.

The survey results (location code 0350B2KF01) indicated that the decontamination was successful and the areas within this survey unit meet the criteria for release for unrestricted use.

Release Record - Survey Unit

Location Code: A0350'WZ001BZE01
(0350B1TW01)

Survey Design:

Beta Scan: Scanned 100% of the wall surfaces during an investigation survey in accordance with the instructions in Survey Package ID: 0346. No additional scanning necessary.

Total Surface Activity: 124 measurements. Collected total activity (direct) measurements at marked areas on the wall surfaces.

Exposure Rate: 68 measurements. At 1 meter from total surface activity survey measurement locations marked for exposure rate measurements.

$\beta\gamma$ Smears: 124 measurements. At same survey measurement locations as total surface activity measurements.

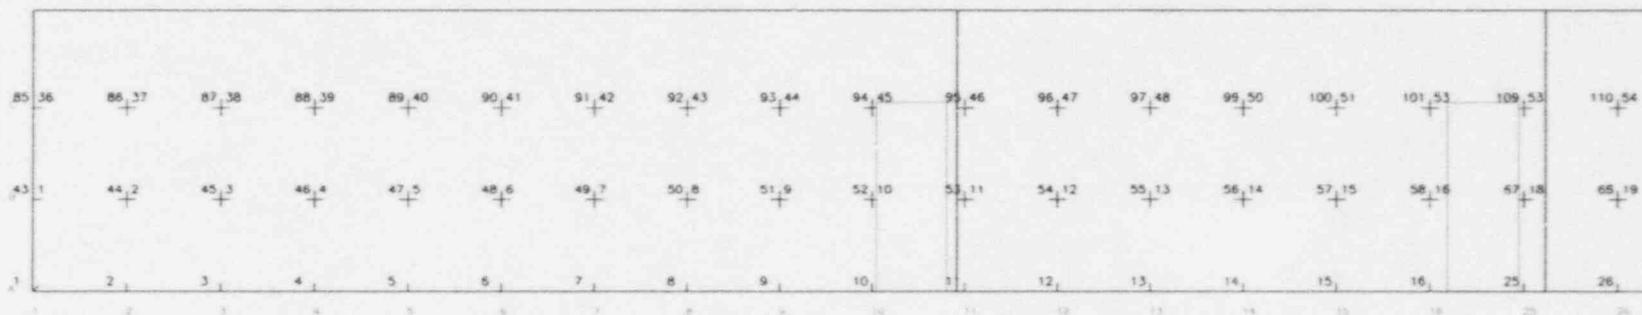

Survey Unit Investigations: None

Release Record - Statistical Summary
Total Surface Activity - Beta Survey

Detector Model: LMI 43-68B
Survey Unit Code: A0350WZ001BZE01
Mediums: Brick - Bare

Group ID: A
Survey Area Number: 0350
Surface Category: WZ001 - Wall Surfaces
Survey Unit Classification: BZ - Suspect, Affected Structure
Survey Reason: E01 - Re-Survey

	Net DPM/100 cm ²
Upper Confidence Level (UCL)	-146.6
Mean	-178.4
Maximum	575.8
Minimum	-626.2
Standard Deviation	215.6
Minimum Detectable Activity	1,049.0
Critical Level	503.3
Samples Reported	124
Samples Prescribed	124

Tests Performed

Samples Reported >= Samples Prescribed	YES	Passed
MDA < 2,000.0 DPM/100 cm ²	YES	Passed
Percent of Samples > 3,000.0 DPM/100 cm ²	0.0	Passed (3)
Number of Samples > 4,000.0 DPM/100 cm ²	0	Passed (4)
UCL of Mean < 4,000.0 DPM/100 cm ²	YES	Passed

(3) 10% Test
(4) Single Measurement Test

Release Record - Corrected Field Activity Values
Total Surface Activity - Beta Survey

Detector Model: LMI 43-68B

Survey Unit Code: A0350WZ001BZE01

Comments:

Activity reported in Net DPM/100 cm²

Underlined DPM values exceed the critical level of 503.3 DPM/100 cm²

Bold DPM values exceed 3,000.0 DPM/100 cm²

Italic DPM values exceed 4,000.0 DPM/100 cm²

Fort St. Vrain Nuclear Generating Station Decommissioning Project

**Release Record - Survey Area
(EXAMPLE)**

Survey Package ID: B0005

Survey Area Description:

North Warehouse - Building #13, Electrical Warehouse - Building #14, Restroom and Shower Facility -Building #1014.

Survey Area Operational History:

The North Warehouse and Restroom and Shower Facility had no history of containing radioactive material.

In the late 1970's and early 1980's, radioactive material was stored in the northeast area of the Electrical Warehouse. Records indicated no spills or occurrences in this building which resulted in contamination.

During 1984, a drying facility for soil samples was installed in a room located in the southwest corner of the Electrical Warehouse to support final survey. The drying facility is still being utilized, and is planned for survey as part of Survey Package ID: I0010.

The floors and lower walls of these buildings were initially classified as Unaffected.

Scientific Ecology Group
Radiological Engineering & Decommissioning Services
Fort St. Vrain Nuclear Generating Station - Decommissioning Project

Release Record - Survey Area

Survey Package ID: B0005

Survey Area Decommissioning and Remediation Activities:

During final survey of the South Central Storage Room floor of the Electrical Warehouse, Building #14, an area of elevated activity was identified at survey measurement location (SML) #24, dowload report 514. The location was decontaminated on 9/21/95 by removing several millimeters of the concrete floor over and area of approximately 100 cm².

The Electrical Warehouse, Building #14, was subsequently reclassified as an Affected Survey Uunit, removed from this survey package, and resurveyed using Survey Package ID: B0017.

Only measurements of the North Warehouse, Building #13 and the Restroom and Shower Facility, Building #1014, remained in this survey package, and are included in this Release Record.

Isolation and Control Measures: Level 2 Control

No use, storage or movement of radioactive material was permitted in Group B Buildings.

All radioactive storage areas outside the Reactor Building were controlled by the Radwaste Supervisor.

The Radwaste Supervisor was notified that final surveys of Group B Buildings were commencing and that no radioactive material was authorized in these areas.

All access points to these buildings were posted with a Level 2 Isolation Label.

Final configuration of this area was maintained throughout the entire survey process. Authorization was required prior to the painting of surfaces, structural renovation and/or removal of components from this area.

Survey Area Conclusions:

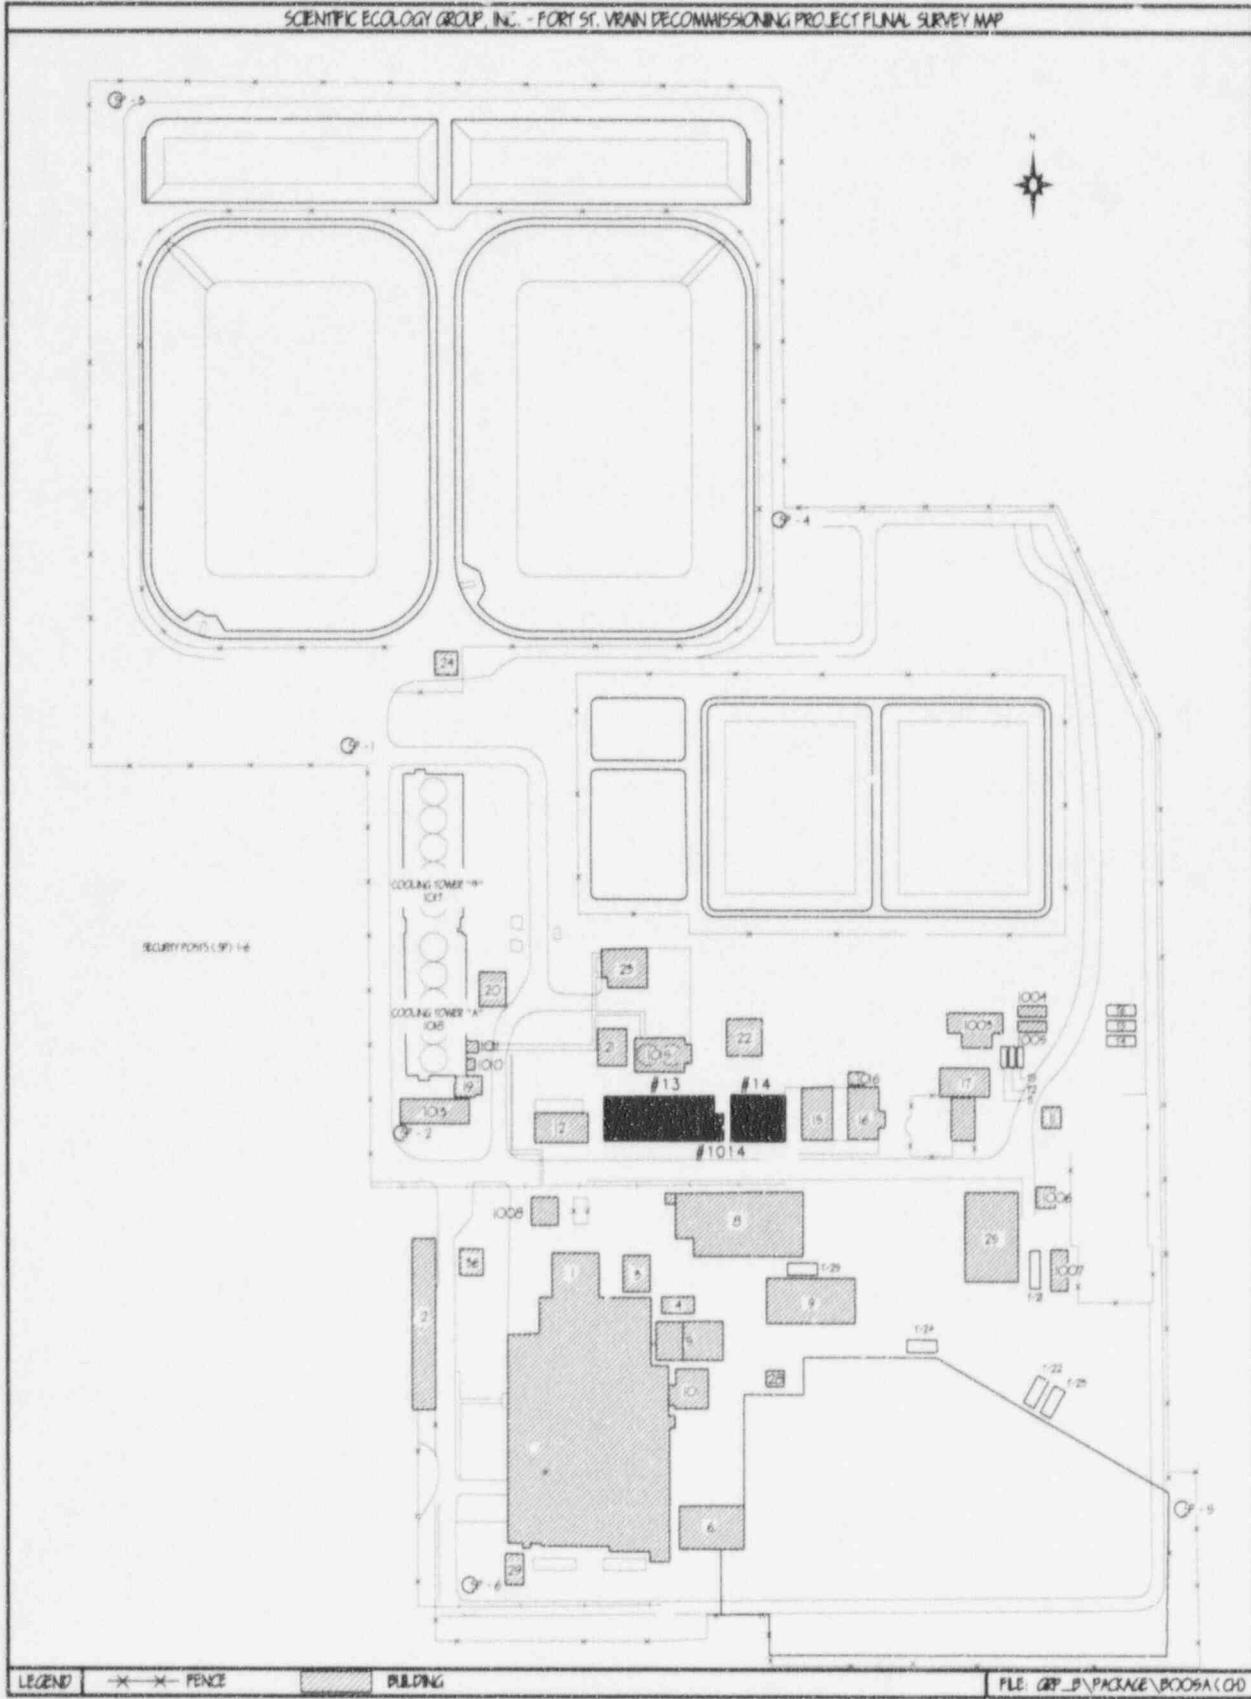

The results of exposure rate measurements collected within these survey units have not been formally evaluated, and have not been included in this "Example" Release Record.

The results of total and removable surface activity measurements collected within these survey units meet the criteria for release for unrestricted use.

(B005A1BF01 and B005A1AF01)

Survey Design:

Beta Scan: Scanned a minimum of 10% of accessible floor and wall surfaces (below 2 m), ensuring coverage of those surfaces of highest contamination potential.

Total Surface Activity: 17 measurements. Collected total activity (direct) measurements at any area(s) of elevated activity identified during the scan, with the balance of the measurements uniformly distributed throughout the survey unit.

Exposure Rate: 17 measurements. At 1 meter from total surface activity survey measurement locations.

$\beta\gamma$ Smears: 17 measurements. At same survey measurement locations as total surface activity measurements.

Because the Electrical Warehouse Building #14 was reclassified as Affected, new survey instructions for the area were established under Survey Package ID: B0017. All survey measurements performed in accordance with Survey Package ID: B0005 for Building #14 were removed from the original package. The remaining 17 survey measurement locations within this survey package were collected in the North Warehouse Building #13 and the Restroom and Shower Facility, Building #1014 and were used for the statistical evaluation of the package.

Survey Unit Investigations:

9/7/95

On 8/28/95, LMI Detector 43-68B failed the post source check tolerance test and efficiency determination. The original set of total activity measurements acquired for location code B005A0F01 were disqualified, and the measurements were repeated using location code B005A1AF01.

SML #24 of download report 514 was collected on the floor of South Central Storage Room in the Electrical Warehouse, Building #14 and indicated net total activity of 4848 dpm/100 cm². Due to the limited size of the room (6 m²), during the investigation the floor surrounding SML #24 was gridded into six 1 meter by 1 meter grids and five total activity measurements were collected from each grid. These 30 measurements were collected using Investigation Survey location code B005AGAF01. A 100% scan survey was also performed on the floor surface of the room and 30 smears were taken at the total activity measurement locations. No additional exposure rate measurements were obtained.

9/13/95

SML #9 of download report 543 (Investigation Survey B005AGAF01) was collected on the floor of the South Central Storage Room and indicated a total activity of 5338 dpm/100 cm². This confirmed the initial measurement of 4848 dpm/100 cm² (SML #24 of download report 514). This also exceeded 50% of the guideline value of 5,000 dpm/100 cm² for an Unaffected Survey Unit. The room was reclassified as an Affected Survey Unit and Survey Package ID: B0017 prepared to provide appropriate survey instructions.

An addendum was prepared for Survey Package ID: B0005 requiring that an additional 100 measurements of total and removable activity be collected from equipment, cabinets, and the tools and supplies located within other portions of the building. The location code for these additional measurements was B005A02S01.

9/28/95

MK decontaminated the concrete floor surrounding SML #24/9 by removing the top several millimeters of the concrete. An area of approximately 100 cm² was decontaminated.

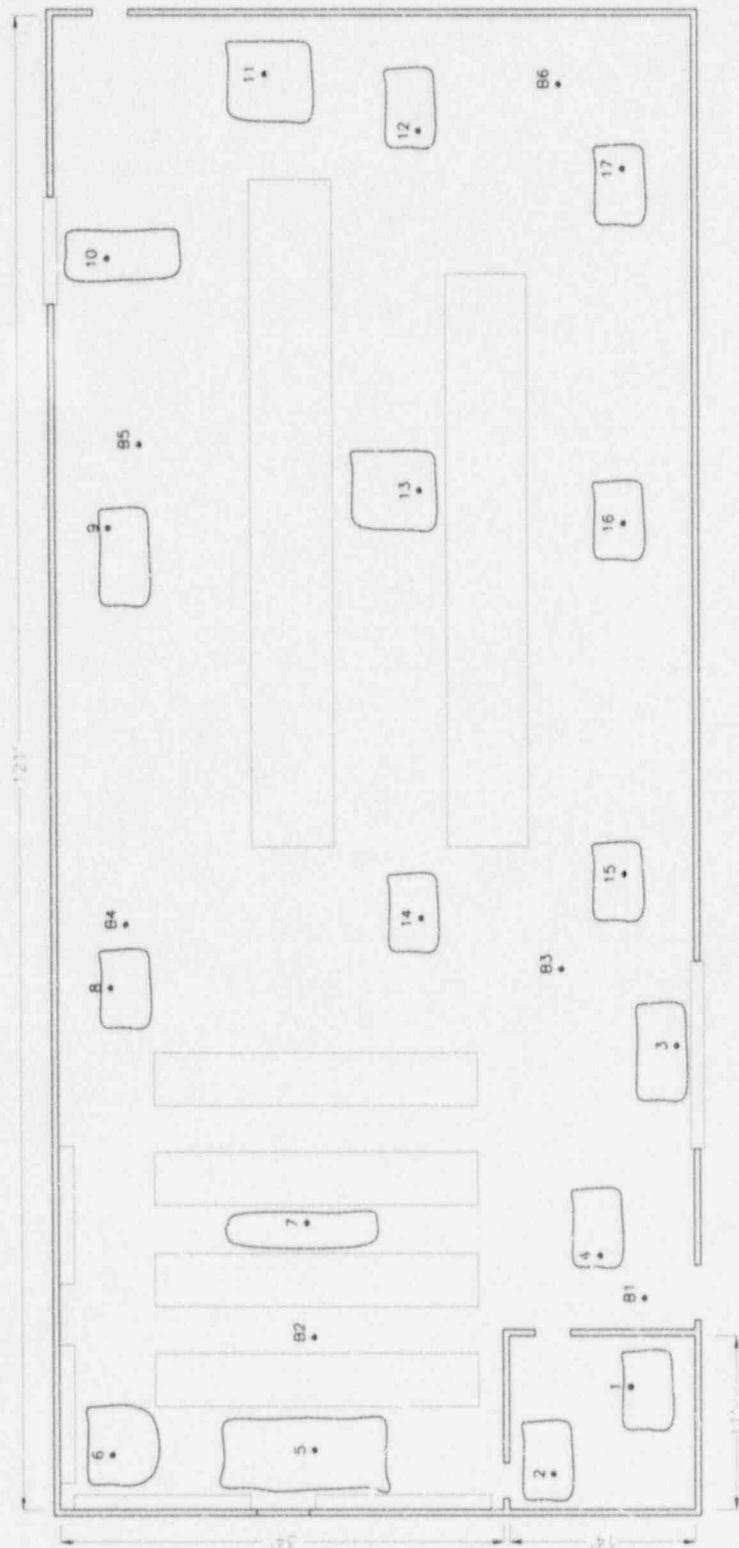

A qualitative gamma isotopic analysis of concrete chips indicated the presence of Co-60. No other licensed material was detected.

During the resurvey of the storage room a an affected survey unit in accordance with the instructions provided in Survey Package ID: B0017, contaminated tools were discovered (Refer to RORs 95-058 and 95-059). Final survey of Building #14 was discontinued under Survey Package ID: B0005, and the addendum to Survey Package ID: B0005 requiring 100 additional measurements was not implemented.

A characterization survey consisting of a scan of approximately 1100 hand tools was performed. Four (4) additional tools and the rung of a step ladder were found to have low levels of residual activity. Based on the characterization survey, the remaining portions of Building #14 were classified as Affected and surveyed in accordance with the instructions provided in Survey Package ID: B0017. Measurements taken in Building #14 under Survey Package ID: B0005 as an Unaffected Survey Unit were not used.

**Release Record - Survey Area
(EXAMPLE)**

Survey Package ID: B0014

Survey Area Description:

Chiller Building #3, Gas Charging Building #4, Security Diesel Generator Building #36, Acid Storage Tank Pump Building #1008.

Survey Area Operational History:

The Chiller building, Gas Charging building, Security Diesel Generator building, and the Acid Storage Tank Pump Building had no history of containing radioactive material.

There are no affected systems within or traversing these buildings. The portion of System #73 within the Chiller Building #3 is considered to be unaffected.

The floors and lower walls of these buildings were classified as Unaffected.

Scientific Ecology Group
Radiological Engineering & Decommissioning Services
Fort St. Vrain Nuclear Generating Station - Decommissioning Project

Release Record - Survey Area

Survey Package ID: B0014

Survey Area Decommissioning and Remediation Activities: None.

Isolation and Control Measures: Level 2 Control

No use, storage or movement of radioactive material was permitted in Group B buildings.

All radioactive storage areas outside the Reactor Building were controlled by the Radwaste Supervisor.

The Radwaste Supervisor was notified that final surveys of Group B buildings were commencing and that no radioactive material was authorized in these areas.

All access points to these buildings were posted with a Level 2 Isolation Label.

Final configuration of this area was maintained throughout the entire survey process. Authorization was required prior to the painting of surfaces, structural renovation and/or removal of components from this area.

Survey Area Conclusions:

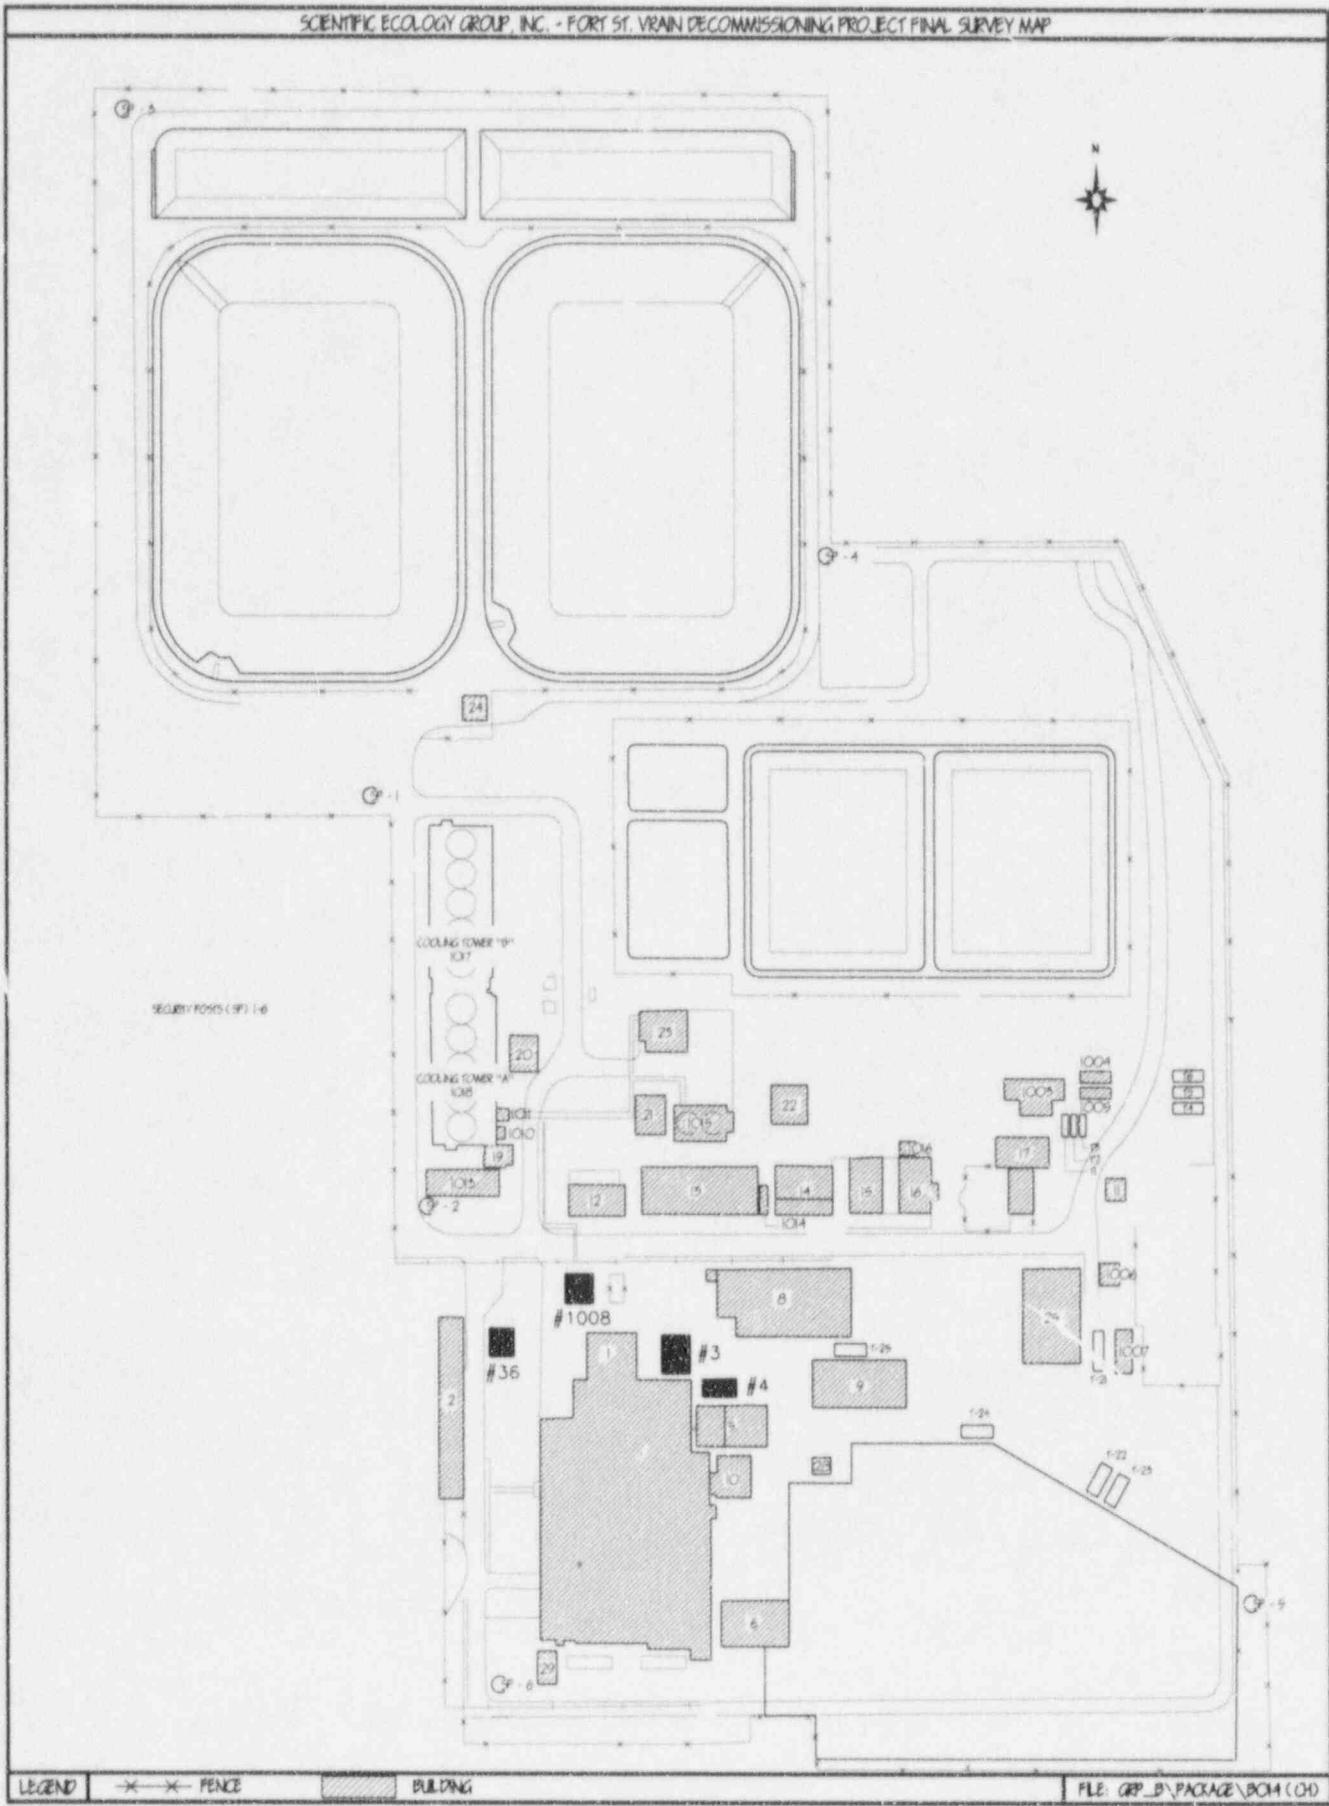

The results of exposure rate measurements collected within these survey units have not been formally evaluated, and have not been included in this "Example" Release Record.

The results of total and removable surface activity measurements collected within these survey units meet the criteria for release for unrestricted use.

**Release Record - Survey Area
(EXAMPLE)**

Survey Package ID: 0344

Survey Area Description:

Production Training Complex - Building #109 - Simulator Room - Walls above 2 meters and ceiling

Survey Area Operational History:

The Simulator Room, located in the Production Training Complex, had no history of containing radioactive material other than non-licensed quantities of radioactive material stored in display cases and used for demonstration purposes. Display cases, which contained Yellow cake (U_3O_8), Thorium Oxide (ThO), Thorium Dioxide (ThO_2), Uranium Oxide, and Thorium Ore, were stored for a short time in the Simulator Room. No detectable contamination was found on any external surfaces of the display cases or floor surfaces during operational use of the room.

The Simulator Room was classified as Affected due to the storage of radioactive materials within the room. The upper walls and ceiling of the room were classified as Non-Suspect Affected. The floor and walls below 2 meters were classified as Suspect Affected and surveyed in accordance with Survey Package ID: 0341.

Scientific Ecology Group
Radiological Engineering & Decommissioning Services
Fort St. Vrain Nuclear Generating Station - Decommissioning Project

Release Record - Survey Area

Survey Package ID: 0344

Survey Area Decommissioning and Remediation Activities: None.

Isolation and Control Measures: Level 1 Control

No use, storage or movement of radioactive material was permitted in Group A Buildings.

All radioactive storage areas outside the Reactor Building were controlled by the Radwaste Supervisor.

The Radwaste Supervisor was notified that final surveys of Group A Buildings were commencing and that no radioactive material was authorized in these areas.

Prior to the final survey of Group A Buildings, training sessions were held with site personnel regarding final survey isolation controls.

Final configuration of this area was maintained throughout the entire survey process. Authorization was required prior to the painting of surfaces, structural renovation and/or removal of components from this area.

Survey Area Conclusions:

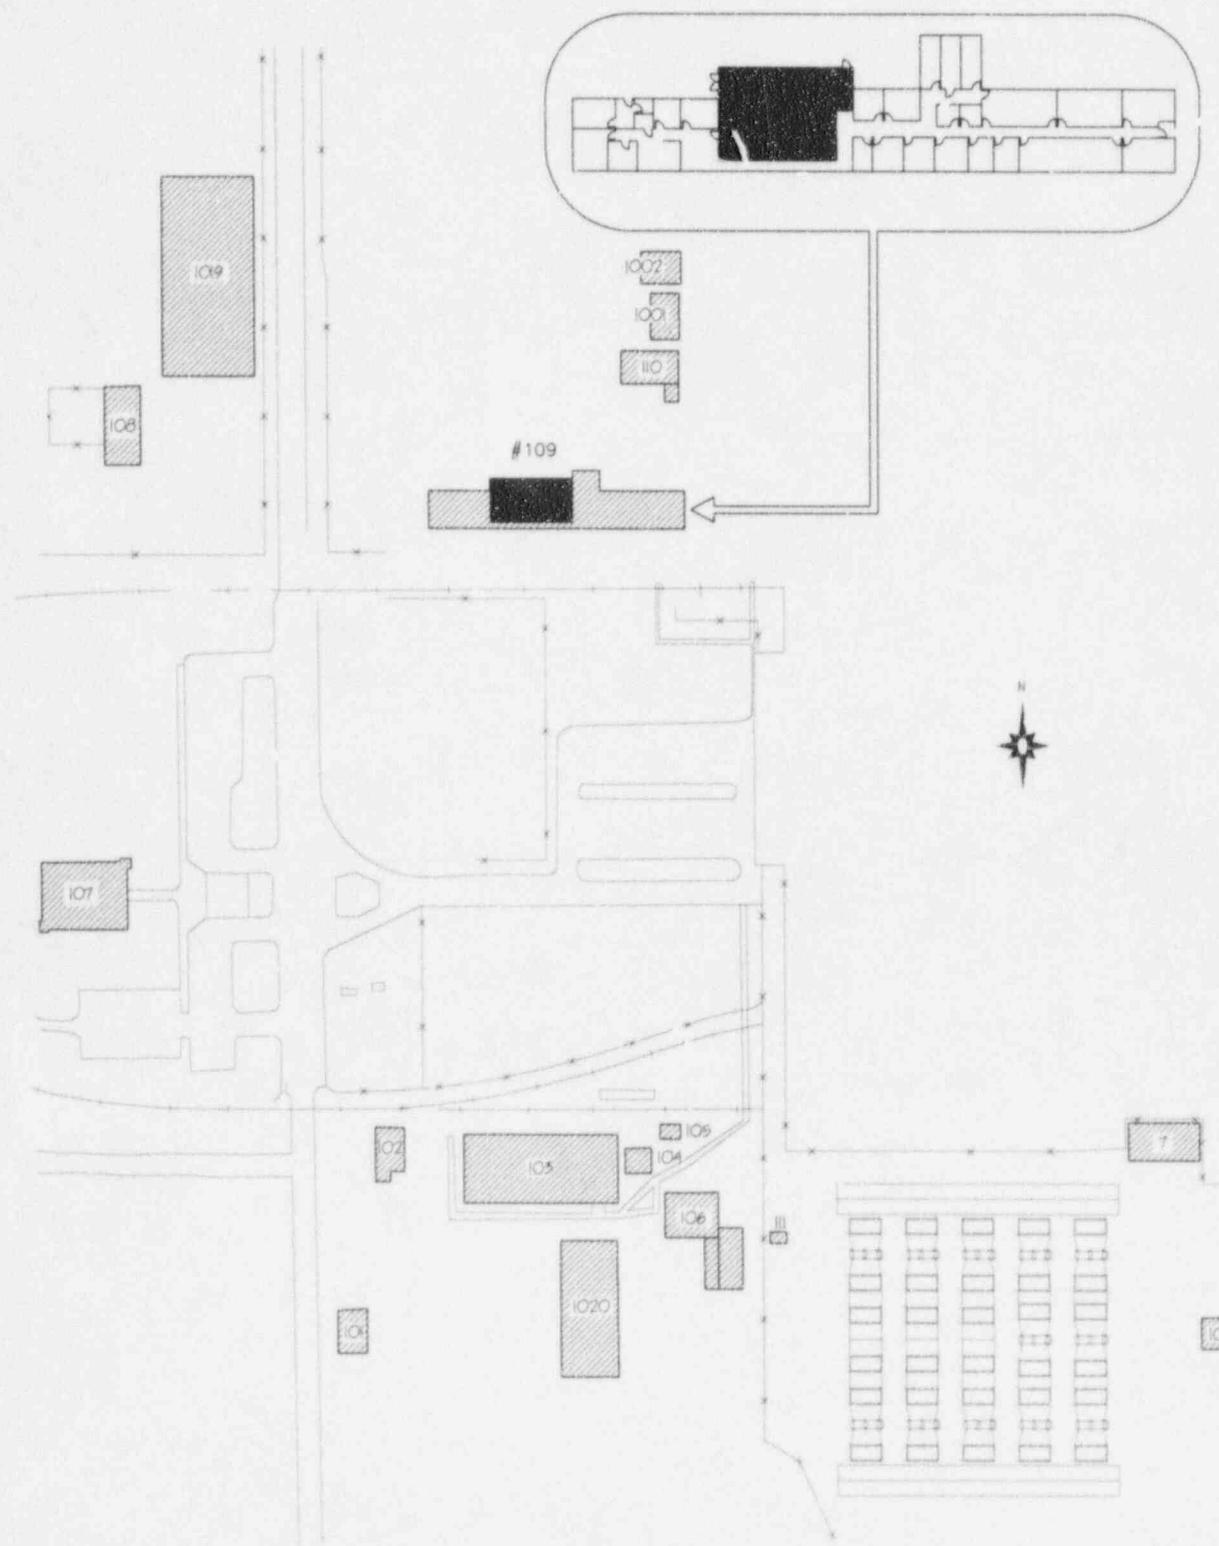

The results of exposure rate measurements collected within these survey units have not been formally evaluated, and have not been included in this "Example" Release Record.

The results of total and removable surface activity measurements collected within these survey units meet the criteria for release for unrestricted use.

Fort St. Vrain Nuclear Generating Station - Decommissioning Project

Release Record - Survey Unit

Location Code: A0344CZ001CZT01
(0344C0MC01)

Survey Design:

Beta Scan: Scanned at least 1 m² at each total surface activity survey measurement location.

Total Surface Activity: 30 measurements. Collected a total activity (direct) measurement within the scan of 1 m². Collected total activity measurements at any area of elevated activity identified during the scan of 1 m², or otherwise selected from those locations most likely to accumulate activity.

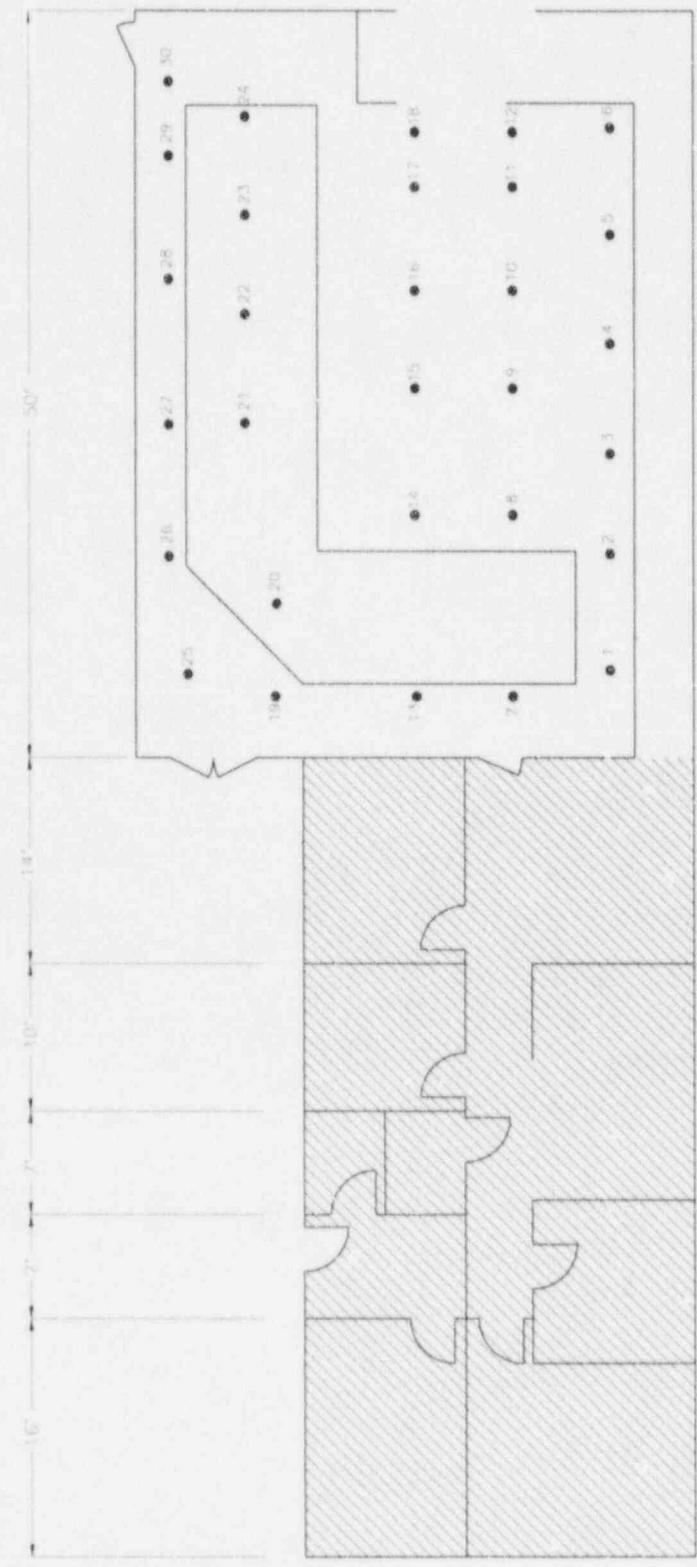

Exposure Rate: 30 measurements. At 1 meter from total surface activity survey measurement locations.

$\beta\gamma$ Smears: 30 measurements. At same survey measurement locations as total surface activity measurements.

Survey Unit Investigations: None.
