| NO. | DATE | TYPE ¹ | DURATION (HOURS) | REASON ² | METHOD OF SHUTTING DOWN REACTOR ³ | LICENSEE EVENT REPORT # | SYSTEM CODE ⁴ | COMPONENT CODE ⁵ | CAUSE & CORRECTIVE ACTION TO PREVENT RECURRENCE | | |
|------------|---------------------|-------------------|--|--|---|-------------------------------|-----------------------------|---|--|--|--|
| 95-005 | 110995 | F | 74.0 | A | 2 | 95-005 | JB | TC | On 11/09/95 at 1501 the reactor was manually tripped due to increasing Steam Generator levels, after attemp by the operators to place the feedwater regulating valve controller in manual failed. The digital feedwater control module output signal was not responding, having a slowly increasing signal trend which caused the feedwater regulating valve to slowly open. The controller was sent to the vendor for further root cause analysis. Additional corrective actions are underway to address other causal factors. | | |
| 95-006 | 111695 | F | 81.8 | A | 2 | 95-006 | JK | SCO | On 11/16/95 at 2252 the reactor was manually tripped following a loss of one Main Feed Pump. Trouble shooting determined that oil losses from the trip mechanism and turbine thrust allowed oil pressure to drop and trip the pump before the standby oil pump could restore pressure. The cause for the initial oil drop has not been determined. | | |
| 09-007 | 112095 | F | 247.3 | Н | 5 | | JK | SCO | On 11/20/95 at 1640 reactor power was restored to 70% while trouble shooting and repairs were made to the Steam Generator Feed Pump Control system. Power remained at 70% through the end of the month. | | |

REPORT MONTH November 1995

H - Other

REFUELING INFORMATION REQUEST

- 1. Name of facility: Calvert Cliffs Nuclear Power Plant, Unit No. 1.
- 2. Scheduled date for next refueling shutdown: March 15, 1996 #
- 3. Scheduled date for restart following refueling: May 8, 1996 * #
- 4. Will refueling or resumption of operation thereafter require a Technical Specification change or other license amendment?

Yes.

- a. License amendment to allow installation of a new diesel generator.
- b. License amendment to reflect the new electrical distribution system configuration.
- c. An amendment and exemption to allow the use of four lead fuel assemblies with advance cladding materials.
- d. License amendment to extend some instrument surveillances to allow a delayed start of the refueling outage.
- License amendment to extend the requirement to do an ILRT so that the test does not have to be performed this outage.
- License amendment to modify the MTC limits to account for additional steam generator tubes plugged.
- g. License amendment which would allow the sleeving of steam generator tubes as a repair method.
- 5. Scheduled date(s) for submitting proposed licensing action and supporting information.
 - a. October 2, 1995
 - b. November 1, 1995 *
 - c. July 13, 1995
 - d. October 20, 1995
 - e. December 1995 *
 - f. January 1996
 - g. November 1995

Important licensing considerations associated with the refueling.

Physical modifications required to bring Calvert Cliffs in compliance with the Station Blackout rule will be completed in the 1996 Unit 1 refueling outage. 7. The number of fuel assemblies (a) in the core and (b) in the spent fuel storage pool.

(a) 217 (b) 1434 (Note 2)

Spent fuel pools are common to Units 1 and 2.

8. (a) The present licensed spent fuel pool storage capacity, and (b) the size of any increase in licensed storage capacity that has been requested or is planned, in number of fuel assemblies.

(a) 4710 (Note 1) (b) 0

9. The projected date of the last refueling that can be discharged to the Spent Fuel Pool assuming the present licensed capacity and maintaining space for one full core off-load.

March 2007

- NOTE 1: 4710 total licensed site storage capacity. (1830 pool + 2880 ISFSI)
- NOTE 2: 240 Spent Fuel Assemblies in the ISFSI.
- Entry has changed since last reported.
- # These are the dates reported in the Business Plan.

DOCKET NO. 50-317 CALVERT CLIFFS - UNIT 1 December 15, 1995

SUMMARY OF OPERATING EXPERIENCE

November 1995

The unit began the month at 100% (840 MWe).

A #11 Steam Generator high level alarm was received and after verifying that the level was increasing, plant operators attempted to place the feedwater regulating valve controller in manual. When these efforts failed, the reactor was manually tripped at 1501 on 11/09/95. Trouble shooting and repairs were made to the feedwater regulating valve controller and the reactor was returned to 100% power at 0915 on 11/13/95.

The reactor was manually tripped at 2252 on 11/16/95 when #12 feedwater pump tripped. Trouble shooting identified several minor problems that together, combined to increase the pump's sensitivity to trip conditions. Adjustments were made to correct these problems. The cause for the initial drop in the trip mechanism's hydraulic oil pressure has not been determined. The unit was returned to operation at 0837 on 11/20/95 and limited to the maximum power level for single feedwater pump operation while evaluating the pump's performance.

The unit continued to operate at 70% power (575 MWe) for the remainder of the month.
