4.0 ABSTRACT OF CONDITIONS NOTED AND CORRECTIVE MEASURES TAKEN

4.1 Component/Weld

Nondestructive examinations were performed by QTS, RAYTHEON, and PWA personnel. The nondestructive examinations utilized VT, PT, MT, and UT techniques. All the examinations were performed in accordance with written procedures that conform to the applicable sections of the ASME Boiler and Pressure Vessel Code. The following is a summary of the recorded indications found during the examinations and evaluated by WE personnel.

IDR 95U2-7P001, Class 1 MANWAY BOLTING, PZR-MWAY-BLT-01 THRU 16 Data Sheet No. 95U2-750P008, Drawing No. ISI-PRI-2104 Indication: 4 bolts with rounded indications Disposition: Accept as is

The rounded indications do not violate the acceptance criteria of IWB-3517. The indications appear as chips from the handling process and are not inservice related. The worst indication results in slightly less than a 1% reduction in cross sectional area of the bolt, therefore it is negligible. The bolting is operable, no additional or successive examinations are required.

ISC 95U2-001, Class 2 S/G Trans Cone To Shell Circum Weld, SG-A-4 Data Sheet No. 95U2-163P001, Drawing No. ISI-PRI-2201 Indications: 5 subsurface volumetric indications Disposition: Accept as is

This examination was a successive examination in accordance with IWC-2420(b). The indications noted, were compared to the previous indications and were determined to be unchanged. This examination completes the requirements of successive examinations required for this component.

4.2 Pressure Tests

No reportable indications observed.
