Docket No. 50-346

Mr. Richard P. Crouse Vice President, Nuclear Toledo Edison Company Edison Plaza - Stop 712 300 Madison Avenue Toledo, Ohio 43652

Dear Mr. Crouse:

/

8⁻⁸

T PR

and and SUBJECT: HIGH POINT VENT SYSTEM TECHNICAL SPECIFICATIONS

On May 5, 1982 (No. 803) Toledo Edison Company submitted an Application to amend the Davis Besse Nuclear Power Station Technical Specifications. Item 1 of that application concerned installation of instrumentation for containment sump level and containment pressure and the equipment for the reactor coolant system high point vents. Review of this application was held in abeyance pending issuance of generic guidance by the Commission regarding these and other items installed pursuant to NUREG 0737. This guidance was issued as Generic Letter 83-37 on November 1, 1983.

Your response, dated March 22, 1984 (No. 1032), to Generic Letter 83-37 indicates that your May 5, 1982 application addresses Items 1, 7, and 8 of Enclosure 1 to Generic Letter 83-37. Our review of your response and the proposed technical specification changes revealed that the proposed technical specifications relating to the reactor coolant system high point vents (Item 1 of G. L. 83-37) is not consistent with the guidance provided. We discussed this with your staff by telephone on June 8, 1984, June 21, 1984, and August 8, 1984 to identify the deficiencies of your proposed technical specification and to establish a mutually agreeable date by which revised proposed technical specifications relating to the high point vent systems will be submitted.

This letter is to confirm our discussion of August 8, 1984 in which you indicated that the revised technical specifications will be submitted by October 1, 1984.

Sincerely.

John F. Stolz, Chief Operating Reactors Branch No. 4 Division of Licensing
