SUBJECT: Calvert Cliffs Nuclear Power Plant  
Unit Nos. 1 & 2; Docket Nos. 50-317 & 50-318  
Informational Meetings for the New Diesel Generators

REFERENCE: (a) Letter from Mr. D. G. McDonald (NRC) to Mr. G. C. Creel (BG&E), dated October 10, 1990, Response to Station Blackout Rule (TAC Nos. 68525 and 68526)

Gentlemen:

As requested in Reference (a), we would like to provide additional information concerning the design and installation of the new emergency diesel generators for Calvert Cliffs Units 1 and 2. The design of the new diesels and the supporting facilities has progressed to the stage where we believe that we have beneficial information to provide to the Staff. Therefore, we request a series of informational meetings with the Staff to discuss various technical issues. We propose meetings in the areas of seismic design criteria, ASME code requirements, mechanical and electrical design, instrumentation and controls design, and diesel surveillance requirements. Other topics may be identified during the design process. The intent of these meetings is to provide information in advance of the submittal of the Design Report for Staff approval.

The first issue that we are prepared to discuss is the seismic design of the new diesel generator building. A proposed agenda for this meeting is attached. We anticipate that other meetings will follow approximately every other month. As our schedule develops, we will continue to discuss the timing of the meetings with you.

Should you have any further questions regarding this matter, we will be pleased to discuss them with you.

Very truly yours,
