McGuire Nuclear Station

Docket Nos. 50-369 and 50-370

Generic Letter 89-10: Motor Operated Valve Testing

Notice of Program Closure

Gentlemen:

Pursuant to the requirements of 10CFR 50.4 and NRC Generic Letter 89-10, McGuire Nuclear Station wishes to inform you of completion of Generic Letter 89-10 requirements. This includes all initial testing and validation efforts to verify the capability of safety-related Motor Operated Valves (MOV's) to perform their safety function and/or to operate under design-basis conditions. The program at McGuire included a total of 429 safety-related motor operated valves.

As stated in our letter dated September 27, 1995, the 1/2EOC10 outages are scheduled for completion on May 13, 1996. Therefore, McGuire suggests a time frame after June 1, 1996 for the NRC inspection of GL 89-10 closure.

We thank you for your assistance in helping us bring this enhancement to nuclear safety to its final closure. Any questions on this matter may be directed to Dwin Caldwell at (704) 875-4328.

Very truly yours,

T. C. McMeekin

Vice President, McGuire Nuclear Station
