JUL 17 1984

Tennessee Valley Authority
ATTN: Mr. H. G. Parris
Manager of Power and Engineering
500A Chestnut Street Tower II
Chattanooga, TN 37401

Gentlemen:

SUBJECT: MEETING SUMMARY - DOCKET NOS: 50-327 AND 50-328

This refers to the meeting held at your request, in the Region II Office on July 11, 1984. This meeting was held to discuss proposed compensatory measures associated with the security power block concept.

It is our opinion that this meeting was beneficial and has provided a better understanding between our security staffs. In accordance with Section 2.790 of NRC's "Rules of Practice", a copy of this letter will be placed in the NRC's Public Document Room.

Should you have any questions concerning this matter, we will be pleased to discuss them.

Sincerely,

Richard C. Lewis, Director
Division of Reactor Projects

ENCLOSURE 1

MEETING SUMMARY

Name of Licensee: Tennessee Valley Authority

Name of Facility: Sequoyah

License Nos.: DPR-77 and DPR-79

SUBJECT: PROPOSED COMPENSATORY MEASURES ASSOCIATED WITH COMPLETION OF THE SECURITY POWER BLOCK

On July 11, 1984, members of the NRC staff and representatives of TVA met to discuss the status of a pending 10 CFR 50.90 amendment which will implement the security Power Block Concept (PBC) at Sequoyah. At this time, specific construction activities would necessitate a temporary deactivation of an intrusion detection system. The licensee discussed proposed compensatory actions that would be implemented during the disconnection of the system.

The licensee was advised that the Regional Office could not process the proposed compensatory measures as a 10 CFR 50.54(p) change to the current security plan because the change involves compensatory actions for the PBC which have not been approved by the Office of Nuclear Reactor Regulation (NRR). The licensee anticipates implementation of the PBC on September 1, 1984. This date cannot be met unless the licensee can deactivate an existing alarm system. The licensee wants to implement the PBC prior to the next scheduled outage.

The licensee was informed that it was possible that the pending license amendment would not be approved by September 1, 1984. The licensee was advised to arrange a meeting with NRR and the Office of Nuclear Materials Safety and Safeguards (NMSS) staffs to discuss the proposed compensatory measures and the PBC approval and implementation schedules.

The Region also noted that the proposed 10 CFR 50.90 amendment should be reviewed and appropriate corrections made to accurately describe the TVA security organization relative to the recent reorganization.
