MEMORANDUM FOR: Karl V. Seyfrit, Chief
 Reactor Operations Analysis Branch
 Office for Analysis and Evaluation
 of Operational Data

AEOD/T415

FROM: Wayne D. Lanning, Lead Engineer
 Reactor Systems 2
 Reactor Operations Analysis Branch

SUBJECT: TR NO. AEOD/T415
 DESTRUCTION OF CHARGING PUMP

Forwarded herewith is the subject technical review report for your consideration.

By copy of this memorandum to PTB, this event is suggested as a future article in Power Reactor Events.

You will note that there remains a question of whether or not the letdown flow was isolated during the event. Representatives of the licensee have attempted to resolve this question for about three weeks. Limited manpower has prevented the licensee from supplying this and other information in a timely manner to meet the schedule for completion of this technical report. If additional pertinent information is provided, the report will be revised.

In addition, note that there is an AEOD activity identified to follow-up on the activities associated with the generic issue involving system interactions with regard to loss of the safety injection system due to a failure in the chemical and volume control system.

Original Signed by
 Wayne D. Lanning

Wayne D. Lanning, Lead Engineer
