Gentlemen:

SUBJECT: NRC INSPECTION REPORT NOS. 50-313/92-17; 50-368/92-17

This refers to the reactive inspection conducted by Messrs. A. B. Earnest and T. W. Dexter of this office on April 17, 1992. The inspection included a review of activities authorized for your Arkansas Nuclear One facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

The inspection involved the review of the means being used by your facility and staff to safeguards kinetic weld devices being stored inside your protected area.

Within the area inspected, no violations or deviations were identified.

Although there are no requirements for protecting and inventorying the explosives associated with steam generator tube plugging, we question the degree of protection being afforded the explosives. This is a potential generic issue, and we have requested guidance from our headquarters staff regarding what procedures, if any, should be in place to safeguard the explosives.

The materials enclosed herewith contains Safeguards Information as defined by 10 CFR Part 73.21 and its disclosure to unauthorized individuals is
