Inspection Summary

Inspection on April 13-17, 1992 (Reports No. 50-266/92010(DRSS);
No. 50-301/92010(DRSS))

Areas Inspected: Routine, unannounced physical security inspection involving Management Support; Protected and Vital Area Barriers; Access Control-Personnel, Packages, and Vehicles; Alarm Stations and Communications; Power Supply; Testing, Maintenance and Compensatory Measures; Training and Qualification; and a review of previous inspection findings.

Results: The licensee was found to be in compliance with NRC requirements within the area examined.

Inspection results concluded that management support for the security program was very good as evidenced by continued senior plant management and corporate involvement in site security activities to assure program effectiveness. Management of day-to-day security activities was good based on inspection observation and interview results. No violations showed an excellent level of performance in the enforcement area. Identification and resolution of technical security issues were good as evidenced by evaluation of security equipment effectiveness and reliability. Review of records, interviews and observation showed that staffing and training are ample.
