Discharge Monitoring Report

Dear Sirs:

Enclosed is the Discharge Monitoring Report for Pilgrim Nuclear Power Station (PNPS),  
NPDES permit Number MA0003557 (Federal) and Number 359 (State).

The period covered by this report is December, 1995.

Should you have any questions on this report, please direct these to our Principal Marine  
Biologist, Mr. Robert Anderson, at (508) 830-7935.

Respectfully,

  
H. V. Oheim  
General Manager-Technical

RDA/nas/RAP96/DMR

## SUMMARY

PILGRIM I DISCHARGE MONITORING REPORT

In accordance with the Federal Clean Water Act, as amended (33USC 1251 *et seq.*; the "CWA"), and the Massachusetts Clean Water Act, as amended (M.G.L.; Chap. 21, 26-53), regarding effluent limitations, monitoring requirements and other conditions set forth in the Pilgrim NPDES permit (Federal Permit Number MA0003557, and State Permit Number 359), Parts I and II, the following information is submitted for the period December, 1995.

I. Discharge Points Covered in this Report

<u>Discharge Point</u>	<u>Discharge Identification</u>
001	Condenser Cooling Water
002	Thermal Backwash for Biofouling Control
003	Intake Screen Wash
004, 005, 006, and 007	Yard Drains (April and September)
008	Sea Foam Suppression
010	Service Cooling Water
011	Makeup Water and Demineralizer Waste Discharge

II. Summary and Notes of Discharge Report

- A. The flow at points 001 and 010 are calculated from system pump capacity and are equal to the total for all pumps in each system running at full capacity for a 24-hour period. The flow at 011 is measured by noting sump levels before and after discharge. Flow at point 002 is a conservative figure obtained by calculating flow if backwashing took place for 24 hours. Flow at points 003 and 008 are calculated from system pump capacity and mean operating time.
- B. The temperatures at points 001 and 002 are measured by resistance temperature detectors (RTD's).
- C. Periodically, total residual chlorine (TRC) concentration in the service cooling water (010) exceeds Permit requirements (0.50 ppm daily average TRC and 1.00 ppm daily maximum TRC) prior to mixing with any other stream, primarily because of the number of service water pumps in operation. Chlorine injection levels are lowered as a corrective measure. The dilution provided by the PNPS circulating water flow keeps total residual chlorine concentrations discharged to Cape Cod Bay below the NPDES permit limit of 0.1 ppm.
- D. For stormwater outfalls 004, 005, 006 and 007, Sigma 800 SL Portable Composite Samplers are utilized. The samplers are equipped with a "liquid level activator" that commences the sampling when the liquid reaches a predetermined level. This assures a sample is taken "within the first hour of the start of a significant storm event." The intake and collection assemblies of the samplers conform to U.S. EPA requirements for collecting oil and grease samples (USEPA letter to BECo dated 1/7/92). No additional inputs to these stormwater outfalls occur downstream of the composite samplers' sampling locations.

- E. Intake traveling water screens were operated with dechlorination pumps operating at all times.
- F. No sawdust was applied to seek and seal PNPS condenser leaks in December.
- G. The following boron and sodium nitrite discharges (ppm) occurred in December 1995 from discharge point #001. All discharges were below NPDES permit limits prior to entering Cape Cod Bay.

<u>Date Discharged</u>	<u>Gallons Discharged</u>	<u>Concentration Before Discharge</u>	<u>Concentration Discharged</u>
------------------------	---------------------------	---------------------------------------	---------------------------------

Boron

12/13/95	8,551	<1.0	<0.0013
----------	-------	------	---------

Sodium Nitrite

12/13/95	8,551	<1.5	<0.0019
----------	-------	------	---------

- H. Approximately 10 cubic yards of sand were removed from the concrete surface of the intake structure on December 5-7, 1995. It was pumped into breakwater crevices above the high tide mark. The sand removal was necessary to alleviate concern over its effects on normal operation of mechanical components/traveling screens, and it was expected to have no adverse environmental impact. The removal operation was in accordance with Part I, Paragraph A.1.0 of the NPDES permit.
- I. The PNPS Environmental Programs and Plans for 1996, to meet NPDES Permit requirements, were sent to the USEPA on December 12, 1995 (BECo Letter 5.95.099).
- J. On December 28, 1995 the USEPA - Region I was notified of the plan to discharge a PNPS miscellaneous water tank with a slightly higher pH (8.6) than the NPDES Permit pH limit of 8.4. Two circulating water system pumps would be operating resulting in a dilution of this parameter to preclude the possibility of any adverse environmental impact on Cape Cod Bay.
