MAY 28 1975

OYSTER CREEK  
DOCKET NO. 50-219  
SPECIAL SITE VISIT WITH EP-4 on APRIL 29, 1975

#### Purpose

A request was made by U. S. Congressman Wm. Hughes, N. J. and Mr. Graham, State Division of Marine Service, N.J. to delay the action required by the Final Environmental Statement in removing the untreated wood (associated with the marinas on Oyster Creek) until after the coming season. Reasons given for the requested delay were: (1) Many of the boat owners had difficulty in obtaining suitable berths for their boats this year and (2) the community would suffer economic difficulties because of loss of business.

#### Participants

##### USNRC

Robert Bores, Radiation Specialist, IE:I  
Wm. Regan, Chief, Environmental Projects-4  
Roby Bevan, Environmental Project Manager for OC  
John Belen, Biologist, RL-Technical Review

##### GPU

T. M. Crimmins, Jr., Manager, Safety & Licensing  
R. G. Hyland, Engineer-Senior, Safety & Licensing  
A. J. Turanski, Environmental Engineer

#### SITE TOUR

The site tour was divided into two parts, the first involved the GPU personnel and consisted of a review of the shipworm activities as seen by boat along the discharge canal. Untreated wood along the canal showed considerable shipworm evidence and included the first several private boat slips along the lagoons beyond the commercial marinas toward the Bay. Treated wood was seen to slow the shipworm activity. The stump removal operations conducted by the contractor (Parker), were reviewed and were estimated to require another week to finish. JCP&L personnel reported that they were having difficulty in obtaining the necessary permits from the Army Corps of Engineers to backfill the banks along Oyster Creek with rock for stabilization. (In the areas of cedar swamp, this backfilling is also necessary to cover exposed wood to prevent exposure to future shipworm activity. In these areas, one stump abutts another until well away from the discharge canal.) EP-4 said they would talk to the Army Corps in regard to this.

Boree/jd Stehr  
5/28/75

B/7

In the second phase of the tour the NRC personnel, without GPU accompaniment, visited each of the three marinas bought by JCP&L and talked individually with

Mr. Kurtz - Oyster Creek Marina  
Mr. Baumgarten - Sands Point Marina  
Mr. DiPalo - Briar Wood Basin

Each was asked (1) Do all your customers have berths for their boats this year? (2) Are you willing or can you operate your marina for this season? (3) Are you aware of any serious economic problems in the community as a result of the marina sales?

1. The answer to the first question was: About 95% of the boat owners had made arrangements for berthing their boats this season. Those not making arrangements apparently did not try. Most of the customers preferred not to leave because as the marina operators said, "they (the latter) had the best marinas and services in the area." They also said these boat owners probably "bumped" some other customers from their berths at other marinas.
2. All of the marina operators said they were unwilling to operate their marinas another season. Several reasons were given by all. (a) Considerable repair had to be done to get the marinas through the season. NRC personnel verified the damage to the pilings and docks currently standing. (b) The liability risks were too great to operate the marinas without the repairs. (c) Most had already committed or sold their equipment to other marinas. (d) At this date most of their customers had new berthing arrangements for the season, hence, no customers.
3. The marina operators said they thought that some of the businesses in the area would suffer from the loss of the marinas. They named Makay's Superette and Liquor Store as the one place that made the loudest noises in this regard, but also mentioned several local bars and restaurants. With regard to Makay's, one of the marina operators pointed out that while crying hardship, the owner is opening a second location in Waretown, so that, business cannot be that bad. The NRC talked briefly with a clerk at Makay's. He indicated that he expected to be hurt but not to the point of going out of business. The marina operators also stated that many businesses in the area had expanded within the last couple of years in anticipation of lots of construction workers from the Forked River site. Since this hasn't materialized yet, some of these businesses are already hurting because of their increased investments and debts.

NRC, EP is expected to deny Congressman Hughes' request for a delay in the removal of the wood associated with the marinas.

Attachment, Report

B/1

4 January 1972

Mr. H. J. Williams  
GPU Service Corporation  
260 Cherry Hill Road  
Parsippany, New Jersey 07054

Dear Mr. Williams:

This letter is the fifth progress report on the menhaden investigations being done in the interests of the Oyster Creek Plant. The field work for this report was done December 27-29, 1972.

During this field period we added another type of fish collecting gear to our procedures; gill nets. Therefore, we are now using three fishing techniques. These are: 1) an otter trawl (referred to in earlier progress reports as a bottom trawl or "standard" trawl), which fishes on the bottom, 2) a modified beam trawl towed between two boats which fishes at the surface, and, 3) monofilament gill nets. The latter, not previously described, consist of four 100-foot lengths of net six feet deep. The nets each have a different mesh size (square measurement), increasing in quarter-inch increments from 3/4 inch to 1 1/2 inch.

Collections this time did not produce any of the blue crabs which were common in the fall. The results from our five stations, identified in the first progress report, are tabulated below.

FISH COLLECTED WITH OTTER TRAWL  
December 27-28, 1972

	Stations					Total
	1	2	3	4	5	
Bay anchovy	2		2			4
Fourspine stickleback			52			52
Winter flounder			1			1

FISH COLLECTED WITH BEAM TRAWL  
December 27-28, 1972

	Stations					Total
	1	2	3	4	5	
Twospine stickleback					3	3
Fourspine stickleback			1			1
Atlantic silversides	56	94	36	6	24	216
Atlantic menhaden		2				2

CHARLES B. WURTZ, Ph.D., *Consulting Biologist*

FISH COLLECTED IN GILL NETS  
December 29, 1972

	1	3	5	Total
White perch	2			2
Spot	3			3
Atlantic menhaden	205			205

The gill nets were not set at Stations 2 and 4, and they did not capture any fish at Stations 3 and 5.

Water temperatures recorded at the time of sampling are presented below. Time is expressed on a 24-hour basis.

FIELD TEMPERATURES (°F)

Station	Date	Time	Measurements
1	27 Dec	1540	Surface 59, Bottom 61
2	27 Dec	1640	Surface 56, Bottom 60
3	28 Dec	0905	Surface 44, Bottom 44
4	28 Dec	1010	Surface 44, Bottom 45
5	27 Dec	1025	Surface 43, Bottom 44
1*	29 Dec*	1624*	Surface 45, Bottom 44

\*Plant went down at 0600.

A total of 205 menhaden were taken in the gill nets at Station 1 as presented above. At the time of capture (beginning at 0900 on December 29th) these fish were alive and appeared healthy in all respects. The size-range of these net-caught menhaden varied from four inches to 15 inches in total length. (Smaller menhaden were also seen.) The average length for the total catch was 8.6 inches. We were much surprised to find this size range present, and particularly surprised to find adult fish present. You will recall that in January 1972 the size of the menhaden killed in Oyster Creek was estimated to approximate four to five inches in total length with little deviation from this estimate. Certainly no large menhaden were seen by me or my assistant and no reports of larger specimens have come to my attention.

The data presented by Reintjes (p. 10) in his Final Report indicate that a population of menhaden larvae acclimated at 15°C (59°F) will suffer 50 percent mortality in 82.8 hours when subjected to 7°C (44.6°F). These temperature conditions closely approximate those recorded in Oyster Creek at Station 1 on December 29th; the plant having been taken down at 0600 on that date.

CHARLES B. WURTZ, Ph.D., *Consulting Biologist*

At the moment we have no knowledge of the effect of the above temperature changes on menhaden larger than the larvae (ca. one inch). However, at the time of our gill netting operation at Station 1 we found three dead menhaden on the bottom of the canal that were two to three inches in length. In addition, about six large (est. 12 inches) menhaden were observed swimmin erratically at the surface of the canal. Apparently these fish had lost locomotive control, which apparently is one of the symptoms of chilling to stress temperatures.

As of 1100 the morning of January 3rd there was no report of dead fish in the Oyster Creek Canal and no complaints. However, no one from the Plant had gone to the canal to specifically investigate this possibility.

I am forwarding this report at this time because I feel that continuing check should be kept on the Oyster Creek discharge canal through the down period and for a day or so after start-up. My invoice, which is not yet prepared, will follow.

If you have any questions I would be happy to respond to them.

Sincerely yours,

Charles B. Wurtz
