Gentlemen:

SUBJECT: NRC INSPECTION REPORT NO. 50-382/92-07

This refers to the inspection conducted by Dr. D. B. Spitzberg and Mr. S. McCrory of this office on April 20-24, 1992. The inspection included a review of activities authorized for your Waterford-3 Generating Station. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report and include a review of the operational status of the emergency preparedness program. The inspection consisted of selective examination of procedures and representative records, interviews with personnel, and evaluation of personnel proficiency in performing emergency response duties.

Based on the results of the inspection, no violations or deviations were identified.

During walkthroughs of simulated accident scenarios with control room operating crews, a weakness was identified concerning the performance of some emergency response personnel. This weakness is discussed in paragraph 7 of the enclosed report. You are requested to provide this office, within 30 days after receipt of this letter, with your analysis of the weakness, a description of your corrective measures, and your schedule for completing these actions.

We have also examined actions you have taken with regard to previously identified inspection findings. The status of these items is identified in paragraph 2 of the enclosed report.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.
