COMANCHE PEAK STEAM ELECTRIC STATION
IMPACT OF HELB TEMPERATURES ON
QUALIFIED EQUIPMENT OUTSIDE CONTAINMENT
QA FILE: CP-84-12, SDAR-136
FILE NO.: 10110

Dear Mr. Johnson,

On June 4, 1984 we verbally contacted your Mr. D. Hunnicutt of a deficiency regarding the temperature envelope requirements on the environmental qualification of equipment outside containment for high energy line breaks (HELB). We have submitted an interim report, TXX-4212, dated July 2, 1984.

As a result of industry wide application of this unreviewed safety question, the Westinghouse Owners Group has developed a program to address the issue on a generic basis. The program has been presented to the NRC and is summarized in Westinghouse letter OG-133 which is available for your inspector's review at the CPSES Site.

The tentative schedule indicates completion in approximately twelve (12) months. We are currently reviewing the need to provide Justifications for Interim Operation (JIO) in order to preclude impacting fuel load. We will continue to monitor activities related to this issue and provide a status report by October 31, 1984.

Very truly yours,

A handwritten signature in cursive script that reads "Billy R. Clements".
