September 19, 1984

Docket No. 50-263

Northern States Power Company ATTN: Mr. C. E. Larson Director of Nuclear Generation 414 Nicollet Mall Minneapolis, MN 55401

Gentlemen:

This is in reply to your letter dated August 24, 1984, responding to the violation which we brought to your attention in Inspection Report No. 50-263/84-14 forwarded by our letter dated July 26, 1984.

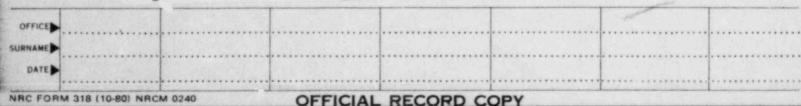

Subsequent to receipt of your August 24, 1984 letter, we contacted Mr. K. Cameron (State of Washington inspector) who confirmed his estimate of 5 to 6 gallons leakage documented in NRC Inspection Report 84-03/1500006. We are aware that no quantitative measurements were made of the liquid which leaked from the heat exchanger at the Richland, Washington low level burial site, and that there were other estimates of that leakage.

We based our enforcement action not only on the State of Washington inspection documentation but also on your failure to conduct a quality control program sufficient to assure that the presence of liquids in solid waste packages was identified and such liquids were solidified or absorbed such that free standing liquids were reduced to the minimum reasonably achieveable, as required by 10 CFR 20.311 (d)(3) and 10 CFR 61.56(a).

We do not concur with your conclusion that the violation should be rescinded.

1E:06

8409240166 840919 PDR ADDCK 05000263

Inasmuch as the corrective actions described in your August 24, 1984 letter for this violation appear acceptable, no further response from you is necessary. We will review implementation of these corrective actions during a subsequent inspection.

Your cooperation with us is appreciated.

Sincerely,

L. R. Greger, Chief

Emergency Preparedness and

Radiological Protection Branch
