

AUG 9 1967

Docket No. 50-219

Jersey Central Power & Light Company
Madison Avenue at Punch Bowl Road
Morristown, New Jersey 07960

Attention: Mr. John E. Logan
Vice President

Gentlemen:

During the recent meeting held on August 3 and 4, 1967, we met with representatives of your company and General Electric to further discuss details of the Oyster Creek Unit No. I design. At this meeting, the results of analyses of the structural behavior of the reactor vessel and internals due to seismically induced loads as well as those associated with coolant loss accidents were discussed. It was agreed that this information would be provided to us for review in writing, since it is fundamental to assessing the adequacy of the design.

At this and previous meetings, we indicated that an 'uncertainty' analysis related to those parameters affecting the thermal/hydraulic design of the "as built" core would be required for our review.

We request that you submit the above information as an amendment to your application.

Sincerely yours,

Original signed by:
Roger S. Boyd

Peter A. Harris, Director
Division of Reactor Licensing
