

March 17, 1969

Roger S. Boyd, Assistant Director for Reactor Projects, DRL

MEETING WITH JERSEY CENTRAL & GENERAL ELECTRIC - DOCKET NO. 50-219

A meeting was held on Friday, March 14, 1969, at the request of GE with regard to staffing for Oyster Creek start-up. The attendance list is attached. From the discussions made at this meeting, it appears that GE has realigned its organization on a task force basis to make available for Oyster Creek full resource capability. The GE effort was encouraging; however, the role of Jersey Central in this structure was unclear with regard to take-over of the operating and technical responsibilities. Jersey was weak in response to these matters.

GE indicated that it intends to file an amendment which will contain the revised operating and technical organizations. We indicated that Jersey's role should be included in the write-up.

We also understand that GE will request waivers on the 60-day waiting period for re-examination of operations that failed the first test; i.e., from 60 to about 30 days. In addition, it may also request a waiver on the qualifications of the Operations Supervisor; i.e., that he be exempt from licensing. A candidate would be proposed on the basis of past experience and performance.

As indicated to GE and Jersey, no decisions would be possible at this time. We will await the amendment.
